

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

REPORT

TO

The Right Honourable THOMAS H. S. SOTHERON ESTCOURT, M.P., Her Majesty's Principal Secretary of State for the Home Department, &c. &c. &c.

General Register Office, Somerset House,
3d May 1859.

SIR,

I HAVE the honour to submit to you my Twentieth Annual Report, containing the detailed abstracts of the births, deaths, and marriages which were registered in the year 1857, in England and Wales.

One million four hundred and one thousand and eighty names have been inscribed in the National Registers during the year. *Three hundred and eighteen thousand one hundred and ninty-four* persons married. The births of *six hundred and sixty-three thousand and seventy-one* children, and the deaths of *four hundred and nineteen thousand eight hundred and fifteen* persons of all ages, were registered. Neither the births nor the deaths of stillborn children are registered; their numbers consequently do not appear in the Tables.

The births exceeded the deaths by two hundred and forty-three thousand two hundred and fifty-six, and that is somewhat below the number expressing the natural increase of the population, as all the births are not registered, owing to a defect in the English Registration Act.

TABLE I.—Estimated POPULATION, with the Number of MARRIAGES, BIRTHS, and DEATHS registered in England in each Year from 1838 to 1857.

Years ended Dec. 31st.	Estimated POPULATION in England in the Middle of the Years.†	MARRIAGES.	PERSONS *Married.*	BIRTHS (exclusive of Still-born).	DEATHS.	Excess of Births over Deaths.
1838	15,812,256	118067	236134	463787	342760	121027

1852	18,205,227	158782	317564	624012	407135	216877
1853	18,408,513	164520	329040	612391	421097	191294
1854	18,618,760	159727	319454	634405	437905	196500
1855	18,786,914	153118	304236	633043	435703	208340
1856	19,045,187	159337	318674	657453	390506	266947
1857	19,304,897	159097	318194	663071	419815	243256

† The Population has been deduced on the assumption that the annual rate of increase was uniform; viz. 1·220 per cent. in each of the 10 years 1841-51, and 1·326 per cent. in each of the 3 years 1838-40. For 1852-57 the increase of Population has been obtained by taking the excess of births over deaths in the four quarters ending June 30th, in each year. The results, by the latter method, will probably be found now to be more correct than those deduced on the hypothesis that the population increased at the same rate in 1851-2-3-4-5-6-7, as it did in 1841-51.

The recorded natural increase of the population of England and Wales exceeded 666 daily.

I pointed out in the Nineteenth Annual Report the difficulty of determining the exact population of the country until the next census is taken. By the method there described, the population of England and Wales must have been nearly 19,304,897 in the middle of the year 1857. The annual rate of increase was 1·364 per cent. by this method.

The births exceeded by 5618 the births in the year 1856; and the deaths also exceeded the deaths in that year by a much larger number, namely 29,309.

Emigration.—The emigration from the United Kingdom became more active after the Russian war; and in the year 1857 the emigrants amounted to 212,875, of whom 78,560 were ascertained to be natives of England. By taking a proportional part of the numbers of unascertained birthplace, the English emigrants will be raised to 86,348, of whom 9192 sailed to British North America, 39,375 to the Australian Colonies and New Zealand, 37,333 to the United States, and 448 to other places.

Thus 236 English people on an average left England daily; but it is probable that the numbers were replaced by Scottish, Irish, and other immigrants.

The marriage rate is obtained by comparing the number of persons married in a year with the number of persons living; and thence deducing the proportions. Thus in the year to every 100,000 persons living, 1648 married. The births were at the rate of 3435, the deaths at the rate of 2175, to every 100,000 living.

The average rates per cent. per annum during the twenty years were as follows: the marriage rate 1·634, the birth rate 3·293, the death rate 2·232. The three rates during the last year were 1·648, 3·435, and 2·175. The marriage rate and the birth rate were above, the death rate was below the average.

These rates may be stated in another way; on an average of twenty years 1 in 61 of the people married annually, 1 in 45 died annually, and 1 child was born alive annually to every 30 persons living. During the last year these proportions became 1 in 61, 1 in 46, and 1 in 29.

TABLE II.—Proportion of MARRIAGES, BIRTHS, and DEATHS to the Population of England.

Years ended Dec. 31st.	To 100 Persons living.				The Number of Persons living.			
	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	To one Marriage.	To one Person Married.	To one Birth.	To one Death.

1847	·793	1·586	3·152	2·471	126	63	32	40
1848	·797	1·594	3·247	2·306	125	63	31	43
1849	·808	1·616	3·294	2·512	124	62	30	40
1850	·860	1·720	3·340	2·077	116	58	30	48
1851	·858	1·716	3·425	2·190	117	58	29	45
1852	·872	1·744	3·428	2·236	115	57	29	45
1853	·894	1·788	3·328	2·288	112	56	30	44
1854	·858	1·716	3·407	2·352	117	58	29	43
1855	·810	1·620	3·380	2·266	123	62	30	44
1856	·837	1·674	3·452	2·050	119	60	29	49
1857	·824	1·648	3·435	2·175	121	61	29	46
Mean . .	·817	1·634	3·293	2·232	122	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 100 persons living there were ·771 marriages or 1·542 persons married, 3·029 births, 2·238 deaths; the number of persons living to every marriage, person married, birth or death, was 130, 65, 33, and 45 respectively. By disregarding the decimal points the Table will show the proportion to every 100,000 persons living. A correction for increase of population has been made in calculating the above results.

The facts show that upon the whole the people were prosperous and healthy during the year.

Some unfavourable effects of the high temperature became apparent during the autumn, and partial outbreaks of a new epidemic were observed.

Marriages.

131,031 marriages were celebrated according to the rites of the Established Church; and 28,066 otherwise. The proportions were nearly as 82 to 18.

Upon comparing the results with the returns of the previous year, it appears that the marriages according to the rites of the Established Church decreased to the extent of 2588; while the marriages in the registered places and registration offices increased from 25,718 to 28,066, or 2348, being 9 per cent. in excess of the former number.

The marriages (7360) in the Roman Catholic places of worship are less by 167 than the numbers in the previous year; the marriages in the registered places of other Christian denominations increased by 976 or 10 per cent., and amounted to 10,686; the marriages in the superintendent

registrars' offices rose from 8097 to 9642, so the increase was 1545 or 19 per cent. on the numbers in the previous year.

67 marriages were contracted by members of the Society of Friends, and 311 by Jews; the former less by 5, the latter less by 1 than the numbers in the previous year.

The accession of numbers to the class of persons who married *not* according to the rites of the Established Church does not imply any change of creed in any considerable part of the population. It was rather the result of the extension of the principle of toleration by an Act (19 & 20 Victoria, cap. 119.) which came into operation on the first day of the year 1857. Notices of marriage had formerly to be read before the Boards of Poor Law Guardians, and the grant of licences by the superintendent registrar was clogged with difficulties. Both these grievances have been swept away by the Act of Parliament. No one has now any just ground of complaint; and the 131,031 marriages in the national church were performed by no unwilling conformists to her rites.*

---

* The great facilities for marriage afforded by the present state of the law will be apparent from the following brief notice of the various modes in which the solemnization of matrimony may now be effected. Parties may be married in England and Wales—(1) according to the rites of the Established Church, (2) in registered places of worship belonging to the Dissenting bodies, Roman Catholics, &c., (3) in the District Register Offices, and (4) Quakers and Jews may be married according to their respective "usages."

The solemnization of *marriage according to the rites of the Church of England* may take place (1) by special licence, (2) by licence, (3) after banns, or (4) upon the production of the Superintendent Registrar's certificate. A *special licence* can only be granted by the Archbishop of Canterbury; it allows the marriage to be solemnized "at any convenient time and place," but the fee being of considerable amount, not more than 11 couples, on an average, are married yearly upon this authority. The ordinary ecclesiastical *licence* granted by a surrogate is for marriage in the parish church or in some public chapel of the parish or chapelry in which one of the parties has resided for the space of 15 days immediately before the granting of such licence. No previous notice is required; the first application for the licence may be made, and the parties may become man and wife within the hour. For marriage after publication of *banns* it is necessary that the banns shall be proclaimed upon three Sundays in the church of the parish in which the parties dwell, and when they live in different parishes, in the parish church of each. To obtain the *Superintendent Registrar's certificate* one of the parties must give "notice of marriage" in the prescribed form at the register office of the district, where such notice must be "suspended or affixed in a conspicuous place" during 21 successive days, and the particulars entered in the "Marriage Notice Book." After the expiration of that period, the Superintendent Registrar's certificate for the marriage is issued upon application. A previous residence of seven days in the district immediately before giving notice is requisite; and where the parties dwell in two different districts, the same forms must be gone through in both. Under a provision of the Act of 19 & 20 Vict. c. 119., no marriage by certificate can be solemnized in a church or chapel without the consent of the officiating minister.

Marriages in registered places of worship NOT *belonging to the Established Church* can be solemnized either (1) by licence or (2) by certificate; both of which are to be obtained from the Superintendent Registrar. In order to obtain a *licence* a "notice of marriage" in the prescribed form must be delivered to that officer, who enters the particulars in the "Marriage Notice Book," to be therein open for inspection during *one whole day*, after which the licence may be granted upon being applied for. Either of the persons to be married may give the notice and obtain the licence, but one of them must have resided 15 days in the district in which the notice is given. Where the parties live in different districts, notice given in one district is sufficient. Although in ordinary cases the marriage is celebrated in the district in which one of the parties resides, the law allows them to marry *elsewhere*, in the "usual place of worship" of one of them (provided it is a registered building, and situated not more than two miles distant); they may also be married out of the district when there is within it no registered place of worship in which they may be married according to the forms which they desire to adopt. The same freedom of action is allowed with respect to marriages in Dissenting Chapels by *certificate*. In that case the "notice of marriage" must be suspended or affixed in the District Register Office during 21 successive days after the entry of the particulars in the "Marriage Notice Book," on the expiration of which period the Superintendent Registrar may issue his certificate. Only seven days previous residence is necessary before giving a notice for marriage without licence.

Of the church marriages 9 were by special licence, 21,250 by licence, 102,062 by banns, and 3748 by superintendent registrar's certificate; in 3962 instances the mode was not specified. In 100 of these marriages 16·7 were by licence, 80·3 by banns, and 3·0 by certificate. The proportions differed slightly from those in the previous year, the marriages by licence being in rather larger proportions.

The marriages have been found to vary with the prosperity of the country. When young people are in unusually good circumstances, they marry in unusual numbers, and conversely. The prices of a commodity, like wheat, of universal consumption, also vary, and affect the condition of different classes variously. Thus it has been shown in previous reports, that as the price of wheat falls the proportion of marriages by banns in churches increases, and in the annexed Table (page vi.) it is shown that in seven years, when, the price of wheat ranging from 74*s.* 8*d.* to 56*s.* 5*d.*, was 66*s.* 3*d.* on an average, there were 4936 marriages by banns to 1000 marriages by licence; in the five years when wheat was 52*s.* 1*d.*, there were 5469 marriages by banns to 1000 by licence; and in the five years when wheat was 42*s.* 9*d.*, ranging from 50*s.* 1*d.* to 38*s.* 6*d.*, there were 5530 marriages by banns to 1000 marriages by licence. The numbers 4936, 5469, and 5530 were in the inverse order of 66*s.* 3*d.*, 52*s.* 1*d.*, and 42*s.* 9*d.*

The marriages of the middle and of the higher classes are apparently most numerous when the price of wheat is highest, while the reverse happens with respect to the marriages of artizans and labourers. These classes marry in the greatest numbers when the price of wheat is near the general average. All violent fluctuations in prices are injurious; and the

---

Marriages are celebrated in the *District Register Office* upon production of the Superintendent Registrar's licence or certificate; the contract is a purely civil one, as the use of any religious service is prohibited. The presence of the Superintendent Registrar, as well as that of a registrar of marriages, is requisite, and both officers must sign the register.

Marriages *between Jews* and marriages *between Quakers* may be solemnized with or without licence, according to their respective usages; the Jews may marry either in a synagogue or in a private dwelling, and at any hour of the day; the Quakers in a Friends' meeting-house, between the hours of 8 and 12.

These various forms and authorities may be recapitulated thus:—

Marriages may be solemnized,—	*Authority.*
1. According to the rites of the Established Church.	1. Special licence from the Archbishop of Canterbury. 2. Licence from a Surrogate, &c. 3. Publication of banns. 4. Certificate from the Superintendent Registrar
2. In registered places of worship not of the Established Church.	1. Licence from the Superintendent Registrar. 2. Certificate ditto ditto.
3. In the District Register Office - -	1. Licence from the Superintendent Registrar. 2. Certificate ditto ditto.
4. Between Quakers and between Jews -	1. Licence from the Superintendent Registrar. 2. Certificate ditto ditto.

By the English law as it stood before the passing of the Act of 6 & 7 Will. 4. c. 85. no marriage could be lawfully solemnized (except where both the parties were Quakers or Jews respectively) in any other place than a church or public chapel wherein banns might be published, unless by special licence from the Archbishop of Canterbury. This law was enforced by severe penalties; and if any persons intermarried without licence from a competent authority, or without the previous publication of banns, the marriage was null and void to all intents and purposes. Thus all persons (with the exception of Jews and Quakers), whether conforming to the Church of England or not, were compelled to resort to the Established Church in order to have their marriages lawfully solemnized. The boon conferred upon Roman Catholics and Dissenters generally by the amended law of 1836, which enables them to marry in their own places of worship and according to their own forms, may well be appreciated. The recent Act of 1856, besides abolishing the objectionable practice of reading notices of marriage before Boards of Guardians, has sanctioned marriage out of the district in the "usual place of worship" of one of the parties, and reduced the interval between the giving of notice of marriage by licence and the grant of the licence from seven days to one clear day.

medium price, whatever it may be, is most favourable to the happiness of the great bulk of the people.

Marriages of minors.—8885 men and 28,798 women married under 21 years of age; and of every 100 married 5·58 men, 18·10 women, or 11·84 persons of both sexes were minors. The proportion of minors steadily increased from 8·72 in 1847 to 12·03 in the year 1856, and slightly declined in the year 1857. It will be seen at the next census whether the number of young persons out of whom the marriages took place increased in any unusual proportion. In the meantime it will be noticed in a future Table, that the increase of early marriages is chiefly in the mining and manufacturing counties.

In London 2·74 of the men and 12·11 of the women who married were not of full age. There is an excess of adults in the metropolis at the marrying ages over 21; and there are not apparently the same inducements to marry early as exist in the Midland Counties.

The five counties in which the proportion of men marrying as minors was highest were Bedford 11·75; Huntingdon 10·75; Cambridge 9·38; Buckingham 8·95; Northampton 8·81.

The five counties in which the proportion of women marrying as minors was highest were Stafford 26·85; Durham 25·83; Bedford 25·37; Huntingdon 24·95; the West Riding of York 24·67.

1851	·858	5·591	·130	·728	38 6

* Disregarding the decimal point, this will read 804 marriages were celebrated to every 100,000 of the population; 135 were marriages by licence, 669 were marriages by banns. It may be assumed that these two groups represent the whole of the corresponding classes of society, whether belonging to the church or not.

In the South Midland Counties the men and women marry in early life; many miners everywhere appear to marry very young girls.

Rutland 1·81 in 100, Middlesex 2·07, Hereford 2·48, Westmorland 2·96, Shropshire 3·02, are the counties in which the smallest proportion of men who marry are under age.

North Wales 11·78, Dorset 12·56, Cumberland 12·71, Middlesex 12·76, Hereford 12·85, are the counties in which the smallest proportion of women marry under age.

The ages at which 187,910 persons married are stated at pages 26–7; and it will be there observed that more than half the bachelors and spinsters who marry are 20 and under 25 years of age.

The mean age at marriage was, bachelors 25·9 years; spinsters 24·7; widowers 41·9; and widows 38·8; men without distinction 28·0 years; women 25·9 years.

In the annexed Table (V *a*) the counties are arranged in the order of the marriages of minors, beginning with the county in which the marriages of minors were in greatest excess in 1841. I have added for comparison the proportional number of women married who signed the register with marks; and the rates of mortality among children under five years of age.

This table deserves to be carefully studied. It will be observed that great irregularities prevail, but that the general law evidently is, that in the counties where the women are the most ignorant they marry in the largest proportions under 21 years of age, and lose the largest numbers of their children. When the counties are thrown into groups the relation is perceptible.

Re-marriages.—21,872 widowers and 14,487 widows married during the year; and out of 100 men 14 were widowers, 86 were bachelors; out of 100 women 9 were widows, 91 were spinsters.

In Middlesex, out of London, the greatest proportion (15·86) of widowers marrying is found, in Herefordshire the smallest proportion 10·06.

In Staffordshire the greatest proportion 10·84, in Westmorland the lowest proportion 4·57 of widows marry.

130,317 bachelors married the same number of spinsters; 6908 bachelors married widows; 14,293 widowers married spinsters; and 7579 widowers married widows.

TABLE IV.—MARRIAGES. The Proportion per Cent. of *Minors* of each Sex, of Males and Females who *signed the Register with Marks*, and of Persons who were *Widowers* or *Widows*.

† The proportion of Widowers and Widows in the Year 1841 is for the September and December quarters only.

In 1851 the bachelors of the age of 20 and upwards amounted to 1,428,000, the spinsters to 1,445,000, the widowers to 334,000, and the widows to 662,000. And if marriage had taken place indifferently between the several classes the marriages between bachelors and spinsters would have been less numerous than they actually were. The marriages

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 824 marriages took place; of 1,000 men married 723, of 1,000 women 612, signed the marriage register by writing their names; of 10,000 men married 558 were not of full age, of 10,000 women married 1810 were not of full age; of 10,000 men married 1375 were widowers, of the same number of women married 911 were widows.

between bachelors and widows, widowers and spinsters, widowers and widows, were actually fewer than they would have been upon the above hypothesis. The respective ages, among other circumstances, have great influence upon this result.

Signatures of Persons married.—In signing the marriage registers 115,084 men wrote their names, 44,013 made their marks; while 97,332 women wrote their names, and 61,765 made their marks. Of the men 72, of the women 61 in 100 wrote their names; of the men 28, of the women 39 in 100 made their marks. This implies a great deficiency in the elementary education of the people. But indications of improvement appeared in 1847, and as the persons married were educated some years ago, it is evident that the education of the people started onwards after the passing of the Reform Bill, and has since then made considerable progress. In 1846 *sixty-seven* men, in 1857 *seventy-two* men in 100 wrote their names; the proportion of women writing rose, in the same period, from *fifty-two* to *sixty-one*. The progress of the women has been greater than the

progress of the men; and in the following counties the women who write exceed the men in proportion: Surrey (out of London), Sussex, Berkshire, Hertfordshire, Oxfordshire, Huntingdonshire, Essex, Suffolk, Norfolk, Wilts, Herefordshire, and Rutlandshire. In other points of learning the women also probably excel the men.

In Bedfordshire the women are very illiterate; only 51 in 100 who marry write their names. In Cornwall only 55 in 100 write their names. In Staffordshire the "blackness of darkness" hangs over the people; less than half or only 45 in 100 women write their names. Cheshire is bad (50); but the women in Lancashire are unhappily kept in still thicker darkness, for 44 only in 100 write their names. In the West Riding of Yorkshire less than 50 in 100 women write their names. The Welsh will labor under some disadvantages until they all learn the English language in infancy; of the women in Monmouthshire only 44, in North Wales only 43, and in South Wales only 38 in 100 who married, wrote their names.

In the Northern Counties the employments interfered largely with the attendance at schools; but we may hope that arrangements will be made, by the educated classes in the worst counties, to confer the blessings of education upon their less enlightened neighbours.

Buildings registered for the solemnization of Marriages.—The number of places of public worship registered for the solemnization of Marriages, and on the register on 31st December 1857, was 3925, being an increase of 114 during the year. It will be seen from the Table, p. xlviii, that 1342 of these places of worship belonged to the Independents, 882 to the Baptists, 697 to the various sects of Wesleyan Methodists, and 490 to the Roman Catholics. Of the modern sects, the *New Church* had 21, and the *Catholic and Apostolic Church* 16. In London there were 263 registered buildings, in Lancashire 430 (of which number the Roman Catholics had 112), and in Monmouthshire and Wales, where Dissenters are more numerous than in any other division, 594. Including 12,272 churches and chapels belonging to the Church of England, the *Places of Worship* wherein marriages might be solemnized amounted at the end of 1857 to 16,197, besides the Jewish Synagogues and Quakers' Meeting Houses. There were in addition 629 Superintendent Registrar's Offices for the celebration of civil marriages.

Births.

***Births* (*exclusive of still-born*).—663,071 births were registered in the year, and the birth-rate was 3·435 per cent, or such that 3435 children were born to every 100,000 persons living. It is considerably in excess of the average rate (3·293) deduced from the returns of 20 years.**

The birth-rate exceeds 4 per cent. in two counties; it is in Staffordshire 4·225 and in Durham 4·526. In some counties the rate was below 3 per cent.; it was so in Sussex, in Berkshire, in Cambridgeshire, in Norfolk, in Dorsetshire, in Devonshire, in Somersetshire, in Gloucestershire, in Here-

fordshire, in Rutlandshire, in Westmorland, and in North Wales. The birth-rate was highest in Durham, 4·526, and lowest in Devon, 2·792; the difference being 1·734. Durham is the centre of the great northern coalfield; Devon is chiefly devoted to agriculture, but it has Plymouth on its southern coast, and a certain number of copper and tin mines on the western border.

Sex.—Of the children registered 339,998 were males, 323,073 were females; or the sexes were born in the proportion of 1052 males to 1000

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year to 1851. *Since* the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximately represented by the excess of births over deaths registered in each year. The proportions must be taken as provisional; until the next census the absolute numbers cannot be determined.

females. In Westmorland the proportion was 986 boys to 1000 girls; in Suffolk 1088 boys to 1000 girls. These were the two extreme counties. This question has occupied mathematicians, who show that the variations in these ratios depend to a certain extent on the absolute numbers. The ages of the parents and other circumstances produce different degrees of disparity in the sexes.

Seasons.—The births are unequally distributed over the year, and they are in such proportion that to *seventeen* births in the first half there are *sixteen* in the second half of the year. The conceptions are most numerous in April, May, and June. After correcting for the inequality of the time, the relative number of births in the four seasons, referred to a common standard (1000), were as 1042, 1031, 964, and 963.

Children born out of wedlock.—43,002 children were born out of wedlock. So 1 in 15, or 6·5 per cent. of the total number of children born, are exposed to all the evils incidental to illegitimacy. In *fourteen* counties the illegitimate were less than 6 in 100 births; in Surrey out of London 4·9, Kent 5·5, Hampshire 5·5, Middlesex out of London 4·3, Northampton

5·9, Huntingdon 5·5, Essex 5·7, Devon 5·5, Cornwall 5·3, Gloucester 5·8, Warwick 5·5, Rutland 5·8, Durham 5·0, and Monmouth 5·1.

In *eleven* counties the proportion of illegitimate births was 8 or more in 100; in Bedfordshire 8·1, Suffolk 8·0, Norfolk 10·5, Hereford 10·2, Salop 10·0, Lincoln 8·3, Nottingham 9·0, Chester 8·0, the North Riding of York 8·3, Cumberland 10·1, Westmorland 8·6.

In London out of 100 births only 4·2 are registered as illegitimate; but it is believed that this is an under statement. In forming an estimate either of the prolificness or of the state of public morals in a country, the number of children born in wedlock must be compared with the number of married women at childbearing ages; in like manner the number of children *born out of wedlock* must be compared with the number of unmarried women of the same ages.

This is done in the annexed Table (XI).

I have hitherto shown the proportion of births in and out of wedlock to the population of the several counties; and the birth-rate has been found to differ considerably. But that rate is evidently regulated to a large extent, firstly by the proportional number of women in the several counties between the ages of 15 and 55, and secondly by the numbers living in the marriage state at those ages.

In consequence of the arrangements made at the last census, the ratio of legitimate births to married women, and of illegitimate births to unmarried women, can now be definitively determined for each county, from the returns of thirteen years, including six years before and six years after the census year. (See Table XXXIV p. l.)

The proportion of women of the puerperal age differs much in the manufacturing, mining, and agricultural counties; and while the proportion of women living *married* at the age of 20–40 to *ten unmarried* is *ten* in *two* counties (Middlesex out of London and Westmorland), and only *eleven* in North Wales, Devon, Surrey, Gloucester, Somerset, Salop, Hereford, Cumberland, the proportion in four counties, Monmouth, Durham, Stafford, and Huntingdon, is *nineteen* married women of the age 20–40 to *ten* unmarried women of the same age.

The number of unmarried women of the age of 15 and under the age of 55 may be divided into nearly two equal portions; the one of women of the age of 20 and under 40, the other of women above or below that age; and the Swedish returns show that the mothers of the great majority of children are 20 and under 40 years of age. I have, therefore, to determine the relative birth rates, compared the births respectively (1) with the number of women of the age of 15–55, and (2) with the number of

---

TABLE X.—ENGLAND. PROPORTION of BIRTHS to 100 Women living at the Age 15–45, in each of the Years 1841–57.

1857	4,532,839	663,071	14·6	14·9
1	2	3	4	5

* The number of *children born alive* is to the number of *women bearing children* (including those who bear still-born children), nearly as 100 to 102. See the data of this estimate in the 17th Annual Report, Appendix, p. 72. The figures in col. 5. are deduced by multiplying the figures in col. 4. by 1·02.

women of the age 20–40. It will be observed that the counties, arranged in the two orders, stand in nearly the same relative positions.

Thus in Devonshire *one* child in *eighteen* born alive is illegitimate; while in Norfolk *one* in every *nine* children born alive is illegitimate; and in Devon *eleven unmarried women* out of 1000 of the age 15–55 bore children annually; while in Norfolk *twenty-five* out of 1000 unmarried women of the same age bore living children annually. If the illegitimate children had been the children exclusively of women of the age 20–40, then

TABLE XI.—ENGLAND. AVERAGE ANNUAL PROPORTION of Children born alive *out of Wedlock* to 1000 *Unmarried Women and Widows* of the Ages 20–40 and 15–55 in the 13 Years 1845 to 1857; Proportion of *Children born* to *One Birth out of Wedlock* in the same period; and the Proportion of *Married Women* to *Ten Unmarried Women and Widows* of the Age 20–40 living in 1851.

		Average Annual Proportion (1845–57) of Children born alive *out of* Wedlock to 1000 Unmarried Women and Widows of the Age		Proportion of Children born to One Birth *out of* Wedlock (1845–57).	Proportion of Married Women to 10 Unmarried Women of the Age 20–40 (1851).

The Table may be read thus:—In England to 1000 *Unmarried Women and Widows* of the Age 20–40, the Average Annual Number of *Children born alive out of Wedlock* in the 13 Years 1845–57 was 32, and to 1000 *Unmarried Women and Widows* of the Age 15–55 the Average Annual Number of *Children born alive out of Wedlock* was 16·4. Of 15 Children born alive 14 were Legitimate and *one* Illegitimate. Of 23 Women living at the Age 20–40, 13 were Married and 10 Unmarried.

ENGLAND (1845–57.)

Average Annual Number of Children born alive to 100 Women of the Age *15–55*	12·042
Average Annual Number of Children born alive to 100 Women of the Age *20–40*	21·030
Women living aged *15–55* on 31st March 1851	5,003,563
,, ,, *20–40* in the middle of 1851	2,865,061

the proportion of such women must have been 21 annually in Devon and 50 in Norfolk out of every 1000; in nine counties less than 30; in twenty counties 30 and less than 40; in fifteen counties 40 and less than 50 women.

The mining counties Stafford and Durham, the border counties, Hereford, Salop, and Cumberland, the Danish counties, Norfolk, Suffolk, Nottingham, Derby, Leicester, and the manufacturing counties in a less degree, Bedford, York, Chester, and Lancaster, have an excess of women unmarried, yet prolific; while all the Celtic population occupy an intermediate place; and the population south of the Thames has the smallest proportion of unmarried women bearing children.

These tables deserve to be studied by persons living in the several localities in connection with all the circumstances; as there can be no doubt generally of the unhappiness of the children born out of wedlock, any more than there can of the derangements produced in families by profligacy.

Why, it may be inquired, do *twenty-five* in Norfolk, and *eleven* in Devon, bear children annually out of the same number of unmarried women; and what are the consequences to the population of the two counties, distinguished in such different ways.

The same table (Table XXXIV.) shows the proportion of legitimate children borne by women of all ages annually to 1000 married women living of the ages under 40; it is 392 in Cornwall, 321 in Norfolk, which is thus also in another way remarkable.

For all England 1000 married women of the age 15–55 have 220 children annually; 1000 unmarried women have 16 children annually, or one in *fourteen* of them is exposed to the same chance of bearing children as married women.

Deaths.

419,815 deaths were registered; and this number exceeds the deaths in the previous year by 29,309. Thus the annual rate of mortality, 21·75 in 1000, exceeded the rate, 20·50, in the previous year by 1·25; but it was 0·57 below the average of the previous years.

Table XII.—ENGLAND. Deaths.—Annual Rate of Mortality of Males and of Females, 1838–57.

YEARS.	Deaths. Of Males to 100 Males living.	Deaths. Of Females to 100 Females living.	Deaths of Males to 100 Deaths of Females.	Of equal Numbers living, the Number of Male Deaths to every 100 Deaths of Females.

1855	2·348	2·187	104	107
1856	2·125	1·978	104	107
1857	2·237	2·114	102	106
Average of 20 years, 1838–57	2·313	2·153	106	107

The Table may be read thus:—In the year 1838 to every 100 males living there were 2·335 deaths of males; to every 100 females living there were 2·133 deaths of females; and to every 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of *equal numbers living* the deaths of males were 109 to every 100 deaths of females in 1838.

The annual rate of mortality in England and Wales was 22·32, or nearly 22 in 1000, on an average of twenty years; 25·12 was the highest and 20·50 was the lowest rate.

44	North Wales	2·202	2·224	2·223	1·925	1·843	1·990	2·041	1·919	2·091	1·832	2·029	1·863

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year (1841—1851). *Since* the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximatively represented by the excess of births over deaths registered in each respective year ending June 30th.

It might facilitate the recollection of the facts to state, that there is in England 1 birth in 30 persons living ; *one* death in 45 living ; one person married in 61 living. The numbers living out of which the respective events happen, namely, 30, 45, and 61, are nearly in the proportion of 2, 3, and 4.

Sex.—The mortality of males was at the rate of 22·37, and the mortality of females was at the rate of 21·14 in 1000. The difference was 1·23, or rather more than 1 in 1000.

On the average of twenty years, the annual rate of mortality was 23·13 among 1000 males, and 21·53 among 1000 females ; the difference was 1·60. Thus the depression of the mortality below the average among males was greater in 1857 than the depression of the mortality among females.

105 boys were born in the year to 100 girls, and 102 males died to 100 females. On an average of twenty years, 103 males die to 100 females ; and as the number of males living in the country is less than the number of females, this implies that the excess in the mortality

---

The Table may be read thus:—Of 100 Males living of the age of 35 and under 45, 1·436 died in 1847, 1·303 in 1848, and so on for other years, a correction for increase of Population having been made for each Age in each Year; and the deaths of persons whose ages were not returned have been distributed proportionally over each age. The data upon which this Table is constructed appear in this or have appeared in the previous Reports, and in the Census Report. *See* Census Report 1851; and the Annual Reports of the Reg. Gen., particularly the 8th and 9th.

* Influenza epidemic. † Cholera epidemic.

higher, instead of falling. Sanitary works are unfortunately much neglected in many parts of those counties. The Tables (XIII. and XIV.) deserve to be carefully studied by the proprietors and inhabitants of the respective counties.

The mortality in the outer parts of Middlesex was higher than the average; but it is probable that by the extension of London the population has increased faster than the excess of births over deaths indicates, which would account for the alteration of the rate.

It must be borne in mind, in reasoning on all the county ratios, that the census was taken in 1851, and that every year after that the certainty of the results diminishes.

Ages.—As the mortality is found to vary at different periods of life, it is separately given for each of twelve intervals of age (Table XV.) The mortality of males under five years of age was at the rate of 73 in 1000; that of females of the same age, 65 in 1000; at the next interval (5–10) the mortality was about *one tenth* part of what it had been, and it was nearly the same, rather less than 8, in the two sexes; the lowest rate was attained at the school age of 10–15, when less than 5 in 1000 died. At the ages following, 15–25, 25–35, and 35–45, the mortality rises, and is at the rate of 7 and 9 and 12 in 1000; it is higher at these ages in females than in males. At all the subsequent ages up to 95 the mortality of males exceeded the mortality of females, and the rates increased more rapidly. Thus, commencing at the age 45–55, the deaths out of 1000 men living at each decenniad of life were 18, 31, 64, 141, and at the age 85–95 no less than 279. Out of 1000 women at each of the corresponding ages, the deaths were 15, 27, 59, 130, and 269. The mortality of old men of 95 and upwards was at the rate of 343, of old women at the rate of 416 in 1000.

At nearly all ages the mortality exceeded the rates in the preceding year 1856; but it was below the average rate of the preceding ten years, except in the single case of female children under five years of age.

Seasons.—The deaths were unequally distributed through the year. If the number in the average quarter be represented by 1000, then the deaths in the four quarters, assumed to be of equal duration, were in the proportions 1050, 955, 950, and 1045; the deaths in the two warm

seasons being below, the deaths in the two cold seasons being above the average.

The changes in the state of the public health are described in some detail in the following digest of the Quarterly Reports.

SUMMARY OF THE QUARTERLY REPORTS, 1857.

First Quarter.—January, February, March, 1857.

THE returns of births, deaths, and marriages, are satisfactory. The marriage rate was slightly above the average in the first three months of the year. The births exceeded the average number, and the rate of mortality was much lower than the average. The sanitary state of the country has been better in the two last winters than in any two successive winters of which we have authentic records.

Marriages.—The marriages in the winter quarter (January, February, March,) are always less numerous than in any other quarter of the year; but 66,642 persons married in that quarter of the present year. The marriages increased in the manufacturing districts, in Oxfordshire and Northamptonshire, in Essex and Norfolk, in Cornwall, in Worcestershire, in Warwickshire, (and notably in Birmingham,) in Lincolnshire, in Nottinghamshire, in Cheshire and Lancashire, (particularly in Manchester). The marriages in Cumberland rose suddenly from 199 to 300; and in the whole of the four northern counties from 1738 and 1878 in the winter quarters of 1855–56 to 1997 in the winter quarter of 1857. Probably some of the swains who formerly indulged in the licence of a trip to Gretna Green and the Scotch borders to marry, have been induced, by the difficulties which the new law interposes, to marry in England. The great majority of the Scotch marriages are now registered, and we may hope that the Scotch law reformers will ere long free Great Britain from the last stains of their defective marriage law, which, drawing no distinct

The Table may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population of England there were 3,032 births, and 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

line between clandestine concubinage and marriage, tends to expose the young women of Scotland to cruel temptations and errors.

Births.—The births of 170,430 children were registered in the quarter that ended on March 31st 1857; and the birth-rate was 3·60 per cent. per annum, the average rate of the quarter being 3·51. The conceptions in England are most numerous in spring and summer; the births in winter and spring.

The number of births was greater in the last winter than the number in the previous quarter, except the spring of 1854 and of 1856.

Increase of Population.—As the births in the first quarter of the year amounted to 170,430, the deaths to 108,665, the natural increase of population in England and Wales in 90 days was 61,765, and probably somewhat more, as the whole of the births are not registered.

35,007 emigrants sailed in the same 90 days from the ports of the United Kingdom at which there are emigration agents, and it was ascertained that 14,814 of the emigrants were of English origin; to which 1,045 may be added for the due proportion of 2,305 emigrants whose origin was not distinguished. 9,551 of the English emigrants sailed to the Australian colonies, 6,264 to the United States, and only 44 to the North American colonies and all other places.

The Weather, and the Price of Provisions.—The weather presented few essential peculiarities. The temperature of each month was slightly above the average; so was the humidity, although the fall of rain was only 3·6 inches. Remarkable storms of snow and hail occurred in March, and the ranges of the barometer exceeded one inch in each month.

The price of provisions presents two aspects. Wheat, which was 72*s.* 4*d.* a quarter in the winter of last year, has fallen to 56*s.* 10*d.* in the winter of the present year. But the price of potatoes has risen from 86*s.* to 110*s.* a ton at the water-side market, Southwark; the price of beef from 5¼*d.* to 5¾*d.*; of mutton, from 5⅝*d.* to 6⅝*d.* a pound, by the carcase, in the Leadenhall and Newgate markets. Thus the price of wheat fell 21 per cent.; while the price of potatoes in London rose 28, of beef 10, of mutton nearly 16 per cent.

State of the Public Health.—108,665 deaths were registered in the winter quarter of this year, and the annual rate of mortality was nearly 23 in 1,000, against the average of the season 25. The winters of 1846, 1850, and 1856 alone, within the registration range of observation commencing in 1838, show a lower rate of mortality; and the winter of 1846, exceedingly mild, was followed by a hot summer, which gave birth to a severe epidemic of diarrhœa and summer cholera. The temperature of the last winter quarter differed little from the average, and will not account for the low rate of mortality, which may be partly referred to improvements in the sanitary condition of the people. In the country, and still more in the towns, there is, however, great room for further improvement; for the mortality in the villages and small towns was at the rate of nearly *twenty*, in the large town districts *twenty-six*, in 1,000.

The registrars make no mention in their notes of any epizootic affecting animals, and it does not appear that the disease prevailing in parts of the continent has reached England. The pathology of domestic animals is exceedingly imperfect; their diseases are badly characterized; and the effect of epizootic causes on the human race is little understood. It is therefore a wise precaution at all times to prevent the importation of infected animals into England; but it may be inferred from the analogies which influenza and cholera supply, that quarantine is no infallible prophylactic, and that our surest defence against extensive loss of life is to be sought in internal sanitary measures. Disease will come, in one shape or another, at one time or another; and it is always most fatal among crowded animals in ill-ventilated stalls, breathing impure air, and drinking dirty water.

English farmers and their families enjoy many sanitary advantages ; yet they suffer from the heaps of manure which surround their houses. Young farmers of the age of 25–35 die at the rate of 10 in 1000 annually, which is a slightly higher rate of mortality than is experienced by shoemakers, carpenters, bakers, grocers, miners, blacksmiths, at that period of life. Farmers in the subsequent ages of life enjoy superior health, and after 35 live 33 years on an average, as they then become less sensible to zymotic influences; which, however, prove fatal to their children and their cattle. The cattle are exposed to the additional risk of drinking impure water, which recent experience has proved is often fatal; for many of the unscientific farmers in the country still allow the putrid ammoniacal fluids to stray into the roads, or into the ponds where the cattle drink; although, as the late Principal Harris acutely once remarked, this is about as rational as to retain the grains for use after brewing, and to allow the strong ale to run away to waste.

The deaths in the SOUTH EASTERN COUNTIES were 8736. The mortality was very low in Canterbury, Dover, Portsmouth, and Winchester. 16 deaths occurred from angina maligna (scarlatina?) in Ash, and an unusual number from the same disease in Rotherfield (Uckfield), which "I fear," the Registrar says, "must be attributed to our very bad sanitary arrangements." The deaths in St. Peter, Brighton, are below the average. But the following instance illustrates there the pernicious effects of dirt :—

A woman died in the quarter in circumstances which demanded a coroner's inquest. The husband of the deceased died two days after. Several members of the family were immediately afterwards seized with fever, together with some persons who nursed them, two or three of whom died under the attack. The dwelling in which the family resided was in a most filthy and unwholesome condition.

6619 persons died in the SOUTH MIDLAND COUNTIES, or 2073 less than died in the winter of 1855. Measles, however, prevailed in Edgware, where the Brent is polluted, and in Baldock. Bronchitis and whooping-cough have made "sad havoc among children" in St. Andrew the Great, Cambridge. In Sutton Parish, Ely, low fever prevailed; and many cases of ague occurred in the sub-district.

In Essex, Suffolk, and Norfolk, the deaths were 5666; nearly the same number as in the previous winter, but fewer by 1988 than the deaths in the winter of 1855. The Registrar of Bradwell (Maldon) complains that he has every quarter to record one or more deaths not certified by a medical attendant. "They occur," he says, "amongst persons belonging "to a sect called 'Newlights,' who always refuse to call in medical assis- "tance." Scarlatina and whooping-cough have infested Blofield; typhus is lingering in Shipdham, and has proved fatal to several persons in the parish of Tacolnestone. Five children died of whooping-cough in the parish of Docking.

In the SOUTH WESTERN COUNTIES 9737 deaths were registered; 3443 less than the deaths in the winter of 1855. Measles has prevailed extensively, but has not been often fatal. In Stanton St. Quintin, Chippenham, 3 deaths occurred out of 163 cases ; nearly every family in Seagry suffered, but "as yet no death has happened." Small-pox has been excessively prevalent in Wilton ; but "thanks to vaccination," not a single death has occurred. Four deaths from small-pox took place in the union workhouse, Tisbury. Here the reporter is silent under the head of vaccination, which had probably been neglected. There was an excess of deaths from measles in Bridport. In consequence of a misunderstanding between the farmers and the house-owners of Heavitree, sanitary measures have not been carried out to the extent required. The births and deaths are above the average in number. Callington (Liskeard) is in an unhealthy state; 19 persons have died of scarlatina, 3 of typhus. "In this town there is a "large cess or catch pool, a receptacle for all the refuse of the town, "dammed back for the manuring purposes of the proprietor, which must

" certainly have a deleterious effect on the health of the inhabitants." At Penzance the deaths in the three last winters have been 312, 283, and 262. The Registrar observes, " our medical men attribute the absence of " fever, &c. to our improved drainage ; the town of Penzance being now " in course of thorough draining, and having an unlimited supply of " water at high pressure."

The deaths in the WEST MIDLAND COUNTIES were 13,879 ; more than in 1856, and less than in 1855. The mortality was below its average in Bristol, Clifton, and Hereford ; and in North Staffordshire, which has recently been supplied with good water. In Walsall, West Bromwich, and Dudley, 1983 deaths took place in 90 days, out of a population of 219,303 in 1851. The deplorable neglect of sanitary measures, and the extent to which the lives of the poor people of Dudley are sacrificed, may be inferred from this one appalling fact : " small-pox was fatal in *fifty-one* cases !"

The children of Coventry are still dying off rapidly ; but it is gratifying to learn that the municipal authorities and the medical men of the town have made some inquiry into the causes, which it may be hoped will ere long be mitigated. " Of the 145 deaths," the Registrar of Holy Trinity observes, " 87, or exactly three fifths, are those of children under 5 years " of age. Amongst the certified causes of death, there are 28 of measles, " 21 of malignant fevers, and 30 of inflammation of the respiratory ' organs."

6409 deaths were registered in the NORTH MIDLAND COUNTIES. Scarlatina has attacked some districts ; but the mortality has generally been below the average. The registrar of St. Ann, Nottingham, considers the exertions of the sanitary committee one of the main causes of the decrease of mortality. The mortality of Leicester was higher in the last winter than it was in the two previous winters ; but the mortality of the city has been much reduced within the last three years. Leicester in 1841 was inhabited by 50,853 in 1851 by 60,642 people, dwelling upon an area of 3960 acres, of which only 1320 acres are strictly occupied by habitations. The population is dense, and the mortality was at the annual rate of 27 in 1000 during the 10 years 1841–50. The deaths in the 10 years 1841–50 were 14,921, of which it was computed in the Sixteenth Report* that 5575 were *unnatural* deaths, or the results of the insalubrities in which the people of Leicester lived. The borough under the circumstances appointed an intelligent health officer. The system of deep sewerage was completed in 1855, and the sewage was deodorized. The river, which was the receptacle of nearly all the filth of the town, is now comparatively pure. The courts, which were covered with stagnant water, are now clean. The people who reside over the deepened sewers enjoy improved habitations. The annual mortality in the three years 1852–54 was at the rate of 29, 27, and 25 ; while in 1855–56 it fell to 23 and to 21 nearly in 1000.† Small-pox has been completely disarmed by vaccination. The mortality will fluctuate, but by persevering in her career Leicester will reap large rewards of health and fame.

18,020 deaths were registered in Lancashire and Cheshire ; rather more than the deaths in 1856, and 2805 less than the deaths in the winter of 1855. The deaths in Manchester, Salford, and Chorlton were 3445, in Liverpool and West Derby 3200. The mortality is declining, and in the progress of sanitary improvement we may hope to see the quarterly deaths in each of these great centres of population reduced to 2200.

10,988 deaths were registered in YORKSHIRE. In Leeds and Hunslet the health of the people appears to be deteriorating ; 1424 of them died in the winter quarter. Sheffield exhibits little improvement ; the deaths

---

* Reg. Gen. 16th Ann. Rep. pp. 152, 3.

† Report on the " *Sanitary Condition of Leicester in* 1856, *by John Moore, Surgeon, Officer of Health.*"

were 794. Hull and Sculcoates experienced a high rate of mortality. "Better sanitary regulations" are referred to at Bradford; and in that district the mortality has slightly declined.

5879 deaths occurred in the NORTHERN COUNTIES, where the mortality has gradually declined. The decrease has evidently been counteracted by the epidemic of scarlatina, which has infected many districts. In Bedlington the epidemic has been so virulent that many cases have terminated in death a few hours after the attack.

In MONMOUTHSHIRE and WALES 6803 deaths occurred. Scarlatina, measles, and whooping-cough have been epidemic in some districts. The registrar of Cardiff remarks that "the births are 425, the deaths 224. "The deaths, which until very lately have been nearly equal to the births "in the town of Cardiff, are now greatly reduced. Fevers and other "epidemics rarely prevail. This result is attributable to the excellent "drainage of the town recently effected, and also to an abundant supply "of water."

Second Quarter.—April, May, June, 1857.

The marriages and the births were above the average numbers, and the deaths were below the average during the quarter that ended on June 30th. Upon the evidence of their births, deaths, and marriages, the 19,300,000 people of England and Wales have hitherto been prosperous and healthy during the present year.

Marriages.—82,534 persons were married in the three months that ended in June; or nearly 172 in every 10,000 persons living. This exceeds the average of the quarter of the ten previous years. The 41,267 marriages exceed by 2447 the marriages in the spring quarter of 1856. A corresponding excess is observable in all the divisions except the northern; where the decrease of marriages in Sunderland, South Shields, Newcastle, Tynemouth, and some other coal districts has reduced the number of marriages in Durham and Northumberland. The marriages in Cumberland during the three quarters ending June 1855-6-7 were 288, 299, 361.

Births.—The births of 170,444 children were registered in the quarter that ended on June 30th; and the births were at the rate of 3·55 annually, the decennial average being 3·52. The number of births is less by 2819 than the births in the corresponding quarter of 1856; but it exceeds by 5167 the births in the spring quarter of the war year 1855.

Increase of Population.—As the births were 170,444, and the deaths 100,046, the natural increase of the population of England and Wales was 70,398 in 91 days.

93,100 emigrants sailed from the ports of the United Kingdom in the quarter that ended on June 30th, and 35,414 of the number were of English origin; of whom 15,737 sailed to the United States, 6459 to the North American colonies, 13,149 to the Australian colonies, and 69 to all other places.

The Weather and Price of Provisions.—At the Greenwich Observatory the temperature was below the average in April, above the average in May and June. Saturation being taken at 100, the degree of humidity was 76, or one degree below the average. The reading of the barometer was slightly below the average. The fall of rain was 4·7 inches, or 2·7 inches below the average. The air moved at the rate of 78 miles daily. The intense heat in June was remarkable. The first eight days were warm; ten cold days followed; hot weather set in on the 19th, and on Sunday the 28th the temperature near the sea rose to 75°; at places between the latitude of 51° and 52° it exceeded 91°, and even 92°; in London it was 88°; and at all other places under observation, somewhat below 90°. This 28th of June was the hottest day we have experienced since July 6th, 1846. It was also remarkably dry; the temperature of the dew-point falling at times during the day full 35° below the air temperature.

The average price of wheat, like that of consols, has been nearly the same as it was in the first three months of the year; it was 56*s.* 9*d.* in the thirteen weeks of April, May, and June 1857; and consequently wheat is cheaper by 23 per cent., and 17 per cent. than it was in the corresponding seasons of 1855 and 1856. In the London markets beef has risen 7 per cent., while mutton has slightly fallen since last year. The high price of potatoes is the most unfavourable circumstance in the Table. The price of this important esculent was 59 per cent. higher in London than it was in the spring quarter of 1856. The abundant crop of fruit will, to a certain extent, supply its place as an antiscorbutic; and we may hope that the present year's crop of potatoes will be more abundant.

State of the Public Health.—100,046 deaths were registered in the quarter ending on June 30, and this implied an annual mortality at the rate of 2·086 per cent. The mortality in the districts containing the principal towns was at the annual rate of 2·322, that is ·142 less than 2·464, the average of the preceding *ten* spring quarters. In the remaining districts, comprising chiefly small towns and country parishes, the reduction in the annual rate of mortality was ·212; it was 1·868, while the average rate of the season was 2·080.

The deaths in LONDON have fallen progressively since 1855, notwithstanding the increase of population, from 15,001 to 13,212; and the diminution has been proportionally most sensible on the south side of the Thames, where the improvement in the water supply has been greatest. The Registrar of St. James, Bermondsey, notes that to 208 births there were 86 deaths. "This district," he says, "having suffered so "fearfully during the prevalence of cholera, when the water supply was "very bad, and the open tidal ditches poisoned the atmosphere, it is very "satisfactory to observe the excellent state of health now existing, "proving the beneficial effects of good water, excellent drainage, paving, "cleansing, &c.; and I may remark that an improvement is perceptible "in the market gardens and in the foliage generally since the partial "abatement of the smoke nuisance."

In Lambeth, Waterloo (1st Part), the Registrar notes births 145, deaths 55. The deaths are about 20 below the average of the three preceding years. "I have a strong opinion," he says, "regarding the unwholesomeness "of the water we have for years been drinking. There is now a marked "difference in the quality of the supply on this side the river, though "there is still occasionally room for improvement. There has been no "prevailing epidemic."

Attention was formerly called to the effects of the bad water on the people of London; and the improvement in the public health that has been the result fully establishes the correctness of the remarks made on this subject. The effects of the *constant* supply of the best water than can be procured have yet to be registered.

In the SOUTHERN and the EASTERN DIVISIONS the deaths were fewer than in the spring of 1855, and generally fewer than they were in the spring of 1856. Some partial epidemics of scarlatina, measles, whooping-cough, typhus, and small-pox, however, are mentioned by the registrars of these divisions. Two persons were killed by lightning while taking shelter under a tree in Kintbury, Hungerford.* At Chalfont, Amersham, one death occurred in digging for chalk, this making the fifth death from that cause within two years, "owing to the careless mode of performing "the work."

In the WEST MIDLAND DIVISION, Yorkshire and the Northern Counties, the number of deaths in the spring of 1857 exceeded the number of deaths in the spring of 1855. In the NORTH MIDLAND DIVISION, in Cheshire and

* The sub-district and district are designated by the two names in this and similar cases.

in Lancashire, the diminution in the number of deaths was not considerable. Among the districts in which the deaths were in excess of the deaths in the previous quarters may be enumerated Cheltenham, Ludlow, Bridgnorth, Leek, Burton-upon-Trent, Lichfield, Wolverhampton (1000 deaths occurred here), Walsall, West Bromwich, Dudley. All the South Staffordshire districts are in an unsatisfactory sanitary state. The Pottery districts of North Staffordshire have been recently supplied with good water, and their mortality has fallen considerably. King's Norton, Coventry, Hayfield, Chester, (Great Broughton), Hull, Newcastle-upon-Tyne, have also lost more lives than in the two previous spring quarters.

Many districts of the country still suffer from marsh malaria. In Maldon, the Registrar says, "Ague is very prevalent in Tollesbury, Goldhanger, Tolleshunt-D'Arcy and its neighbourhood." The lower levels of the basin of the Thames as high up the stream as Oxford, and as low as Hoo and Sheppey, suffer from malarious diseases in spring and autumn. The mortality on the high grounds at the sources of the Thames is at the average rate of 17 and 18 annual deaths in 1000 living; in the low flooded districts on its banks the mortality rises to 20, 21, 22, 23 in 1000; in Orsett (Essex) the mortality is at the rate of 24 in 1000, in Hoo (the Isle of Grain) 24, and in Sheppey, containing Sheerness, 24 in 1000.

Thus in the marshy districts the mortality is raised from 17, the natural rate, to 24 in 1000, chiefly in consequence of the noxious emanations from a rich ill-drained soil.

Sheppey may be taken as a type of these districts. The inhabitants have that pallid blue aspect which characterizes aguish districts; they frequently suffer from ague, and sometimes from typhoid fever. A considerable number of men in the Sheerness dockyard and in the ships on the station have been struck down and disabled by fevers during the present year. Sheppey has its high lands but a large quantity of it is marsh, drained imperfectly by ditches containing stagnant water and putrid vegetable and animal matter. The owners of this property are absentees, and the tenants mostly commit their farms to the care of a bailiff. No effort is made at improvement by the small occupiers, although experience has shown that the investment of money in the deep effectual drainage of the marsh is remunerative in a high degree. His Excellency Lord Harris has published an interesting statistical document showing the outlay and receipts in detail on the Rayham farm, of 439 acres, in Sheppey, during the seven years ending Michaelmas 1856. 2200*l.* has been obtained from the Government Drainage Fund and expended on the land during the last four years. After allowing a liberal interest for all the money invested, the profit, which was set down at 141*l.* in the first year, rose progressively to 693*l.*; and upon taking the value from the inventory at the beginning and end of the last year, in connection with the surplus of the receipts over outgoings, 972*l.* remains as a balance towards the rent of a farm in 1856 for which a tenant could not be obtained at Michaelmas 1849 who would pay a higher rent than 100*l.* The whole of this remarkable document* deserves to be closely scrutinized and studied by all the owners of the marsh land which now prejudices the health of the inhabitants and deters people from building in its neighbourhood. Sheerness should be immediately drained and supplied with pure water.

As a Government fund affords very proper facilities for the loan of money, drainage should be made compulsory on the owners of the land in districts which are so fatal to the inhabitants as Orsett, Hoo, and Sheppey; more particularly when the naval force of the country is seriously impaired by this standing insalubrity. It is evident that a large portion of our naval reserve may be paralyzed by ague and fever at the very time when it may be called upon to fight. A force which lives in

* Published at Sittingbourne, Kent.

an aguish atmosphere is necessarily enervated and loses some of its courage. It cannot be always ready to meet the enemies of England at the gates of the Thames and the Medway.

It will be observed that many districts of the country are now unusually healthy. For the information of those who may be about to resort with their families to watering places a Table is annexed of the mortality during the three months that ended on June 30th in some of the principal places of resort. It must be borne in mind that the mortality of some parts of these districts is lower and of other parts higher than that here stated :—

ANNUAL RATE of MORTALITY per 1000 in the Districts round the Sources and on the Course of the River THAMES, during the 10 Years 1841–50.

* The decrease in the mortality of Yarmouth is stated by the Registrar of the northern sub-district to be owing to the excellent sanitary arrangements carried out by the authorities of the town.

Third Quarter.—July, August, September, 1857.

THE marriages in the three summer months were slightly below the average number for the quarter; the births are above the average. The deaths exhibit a rate of mortality below the average of the season, but higher than the rates of the corresponding seasons of the two previous years. Diarrhœa has prevailed in many districts, and a few fatal cases of cholera of a severe type have been registered.

Marriages.—77,338 persons were married in the three months of July, August, and September. The number is less by 840 than the number of persons who married in the corresponding quarter of 1856. The annual rate of marriage in the quarter was 1·59 persons per cent., the average being 1·61 per cent. In the spring quarter of 1857 the marriage rate was above the average. The marriages fell off in London, in the South-eastern, the South-western, the North-western, and the York Divisions. In the South Midland, the Eastern, the West Midland, the North Midland, the Northern, and the Welsh Divisions, the marriages, as compared with those in the corresponding quarter of the previous year, increased.

Births.—The births of 161,181 living children were registered in the quarter that ended on the last day of September. This number exceeds by 3719 the births in the corresponding quarter of the year 1856; and is the greatest number of births that ever occurred in England during the summer months. The birth-rate of the quarter was 3·31 per cent. It has been only once exceeded in the summer quarter:—in 1851 the rate was 3·32. The births in the first six months always greatly exceed in number the births in the last six months of the year in England.

Increase of Population.—The births were 161,181, the deaths 100,528; consequently the recorded natural increase of population in England and Wales is expressed by 60,653.

51,994 emigrants sailed from the ports of the United Kingdom at which there are Government emigration officers. Of this number 18,725 were ascertained to be of English origin; and allowing for a due share of the 5516 whose origin was not distinguished, the probable number of English emigrants may be set down at 20,947. 10,197 of the number sailed to the United States, 1707 to our healthy North American colonies, 8947 to the Australian colonies, and 96 to other places.

The weather and the Price of Provisions.—These elements affect the births, deaths, and marriages directly and indirectly.

The temperature of July, August, and September was considerably above the average of the same months in the last eighty-six years. Since the year 1771 the temperature of July has only been somewhat exceeded thirteen times. Since 1771, a date as far back as trustworthy records extend, the temperature of the month has never been so high as it was in August last; and the temperature of the month of September was only exceeded six times. In one year only (1818) out of 86 years did the temperature exceed the temperature of the three summer months. July and August were less, September was more humid than usual. Little rain fell in July; the average amount fell in August; the rain-fall in September was above the average. As a general rule the temperature of a thermometer with its bulb on the grass falls in every month below the freezing point (32°); but it is a remarkable fact that at Greenwich the thermometer so placed never fell below 36° in the last three months.

The average price of wheat was 76*s.* 1*d.* and 72*s.* 3*d.* in the two periods of thirteen weeks ending September 1855, and September 1856; it fell to 59*s.* 11*d.* in the thirteen weeks ending September 1857. Wheat is consequently 17 per cent. cheaper than it was last year. The price of beef by the carcase in the Leadenhall and the Newgate markets has fallen in the three summers from 5$\frac{7}{8}$*d.* to 5$\frac{3}{8}$*d.* per pound; that is 8$\frac{1}{2}$ per cent. The price of mutton by the carcase has fallen from 6*d.* to 5$\frac{3}{4}$*d.* a

pound, or 4 per cent., in the same seasons. The price of potatoes has unfortunately risen from 74*s*. to 78*s*. and to 105*s*. a ton, in the three seasons; it was 42 per cent. higher in the thirteen weeks ending September 1857 than the prices of the same season in 1855. The scarcity of potatoes is likely to produce scurvy in the country, as people are not generally aware that potatoes are an antiscorbutic, which can only be replaced by fruit and vegetables. The abundant crop of apples will supply to a certain extent the vegetable acids, which experience has shown that the human frame requires to maintain its elements in equilibrium.

State of the Public Health.—100,528 deaths were registered in the quarter ending September 30th; and the death rate was 2·06 per cent. The deaths in the summer quarter of the previous year were 91,155; and in the summer of 1855 the deaths were 87,646. The excess of deaths in the last summer quarter over this number was 12,882.

The annual rate of mortality per 1000 during the summer was 25 in the town districts and sub-districts where 8,247,017 people dwelt in 1851 upon 2,149,800 acres; and 17 in the other districts and sub-districts of England and Wales where 9,680,592 people dwelt on 35,175,115 acres. The Arts which have been invented in cities are now required to render their natural homes healthy. As a preliminary to all other steps the people must be supplied with pure water. The town manures must be restored to the disinfecting fields every day, and no longer be suffered either to remain under human dwellings or to pollute the streets and streams around them.

If the mortality in the towns had been at the same rate as the mortality in the other districts, the deaths would have been upwards of 17,000 fewer than they were. What was the cause of this great destruction of life? Evidently the violation of the plain natural laws of life. And the strict observance of these laws must be of the utmost importance to the welfare of the human race, otherwise their violation would not be so terribly punished by the Almighty. Indeed, if the English race could lose strength, beauty, health, and life in the impurities of its dwelling-places with impunity, the imagination of Swift alone could conceive,—his pen describe,—the depth of degradation to which the nation might fall.

The intelligent classes of this country will, however, never acquiesce in the continuance of its present imperfect sanitary condition, and of the resulting diseases which it brings down upon the heads of the population; who often when they violate the laws of nature know not what they do.

A summer of unusual warmth in our European climates not only promotes the growth of corn and wine, but is probably salutary to the human frame, where the land is drained, decaying refuse is buried in the earth, and cleanliness is observed. But in England these conditions are not yet complied with; hence fever, ague, and diarrhœa have prevailed extensively in the last hot summer. The Registrar of Strood (Kent) has registered within one as many deaths as births. He remarks:—

> This district being marshy in a great part, the poor have suffered during the last winter from agues in a greater degree than has been experienced during a great number of years. Ague leads to debility, and the consequent inability to earn a sufficient livelihood. An unusally hot summer has operated still more to make the marshes and adjacent district intensely unhealthy. Many deaths have been registered from intermittent fever, directly or indirectly. This disease is rarely fatal [under favourable circumstances.] The chief mortality is amongst indigent and debilitated persons and their families, who have fallen an easy prey to diseases of a general character in consequence of their reduced condition.

The other districts of Kent on the marshy banks of the Thames and the Medway have also experienced a mortality above their average; so has the district of Romney Marsh. Other districts of Kent, such as

Elham and Bridge, have lost few inhabitants, the mortality of these healthy places having been below the average. While the mortality in Kent and Hampshire exceeded the average, the mortality in Surrey (out of London) and of Sussex was about the average. 363 persons died in Southampton out of a population amounting in 1851 to 34,098; scarlatina, hooping-cough, and measles having prevailed. The sanitary state of this thriving town evidently admits of improvement, in which the nation at large is interested, as it is the station of the West India and other mails.

The mortality in the SOUTH MIDLAND COUNTIES is higher than usual: 6395 persons died in the three months. Diarrhœa was fatal at Hillingdon, Brentford, Acton, Bishop Stortford, Royston, Hatfield, St. Albans, Ramsey, Dunstable, Cambridge, Ely, Whittlesey, and Wisbeach. One death from English cholera was registered at Ramsey (Huntingdon), and one in Wisbeach.

In the EASTERN COUNTIES the deaths (5686) exceeded the average number. In West Ham, Epping, Billericay, Chelmsford, Tendring, Colchester, and Lexden; in Sudbury, Ipswich, Blything, Mutford, Yarmouth, Norwich, Forehoe, and Docking, the increase of deaths was considerable. Bilious fever, putrid sore throat, typhus, diarrhœa, ague, scarlatina, have prevailed.

The Registrar of Bradwell says:—

There was a terrible epidemic of typhus in Tillingham parish, also of malignant sore throat. The drainage in the part most visited by the fever is very bad. Nearly every house had from 1 to 3 persons sick in it.

One of the Registrars of King's Lynn adds:—

Diarrhœa may be almost said to be universal. The high temperature has continued much longer than usual. The illness is now accompanied with the usual remittent fever, which is the prevailing disease here. The deaths from diarrhœa seem confined to children during dentition.

One death from "Asiatic cholera" was registered at Bungay; and one death from "cholera" at Buxton in Norfolk.

In the SOUTH-WESTERN Division the deaths increased in the three counties of Dorset, Devon, and Cornwall; the deaths in the five counties were 7647. Small-pox was fatal to 8 persons in Wilton. Scarlatina raged at Weymouth as it only rages in bad sanitary conditions. In Lerrin (Liskeard) the Registrar reports:—

The deaths (24) are nearly double the average, and more than a third are those of children from disease in the throat. This epidemic here generally shows itself in the form of cough and sore throat, and appears, after arriving at a certain stage, to baffle medical skill. I am told that something of a fungus nature shows itself in the throat.

Croup, and what is locally called "throat fever," also prevailed in Kea (Truro).

The WEST MIDLAND COUNTIES have suffered more than any of the previous divisions; the deaths amounted to 12,357. The great coal and iron districts, Wolverhampton, Walsall, West Bromwich, Dudley, and Stourbridge, are in a very unhealthy state; the mortality has been raised greatly above the average by small-pox, diarrhœa, scarlatina, typhus. One death from cholera happened in Wolverhampton, one in Wednesbury, 5 in Tipton, one in Sedgley. If the authorities, who are intelligent and active in many things, do not bestir themselves, the population may again be decimated by epidemic cholera. North Staffordshire is already supplied with good water; the supply of water in South Staffordshire was recently, and is probably still, execrable: the results are legible in the registers of death.

The sanitary state of many English towns has undergone improvement, and the mortality has declined in recent years; but this has unfortunately not been the case in the Birmingham district, nor in the districts immediately adjacent. The deaths in the three corresponding summer quarters

of 1855, 1856, 1857 were 920, 1118, and 1520 in the Birmingham district; 293, 353, and 529 in the Aston district; 132, 114, and 202 in the King's Norton district, containing Edgbaston, which has hitherto been one of the healthiest districts in the kingdom. Diarrhœa has been exceedingly rife. The authorities of Birmingham will, we may hope, be stimulated by the recent meeting of the Congress of Social Science to take effective steps for the improvement of a great town, which has hitherto not stood very low in the sanitary scale.

The deaths in the NORTH MIDLAND DIVISION exceed the deaths in the corresponding quarters of the two previous years, but the mortality is not high. In some districts the mortality is low. In Loughborough the Registrar says :—

The deaths are below the average. There have been *fewer cases of diarrhœa than is usual at this time of the year*. The population generally are well employed, which, with sanitary arrangements, may have tended to reduce the rate of mortality.

In Lincoln diarrhœa has been "very prevalent among children;" in Horncastle diarrhœa has been "very prevalent;" in Great Grimsby diarrhœa has raised the deaths above the average. Worksop, Basford, Nottingham, and Newark have also been visited by diarrhœa. In St. Peter, Derby, 31 persons died from diarrhœa. A child (11 weeks) died of "*English cholera;*" a gentleman, 82 years old, of "English cholera" (9 days); and a man 73 years of age of "cholera, with congestion of brain."

17,287 persons died in Cheshire and Lancashire. The number of deaths exceeds the numbers in the two previous corresponding quarters. Scarlatina was fatal in Stockport, Runcorn, and Chester. Diarrhœa also prevailed in districts of the two counties. Three deaths from cholera occurred at Heaton Norris, one of them twelve hours after the attack; one death from "Asiatic cholera," it is said, occurred at Cheadle. In Liverpool and in the West Derby district adjoining (pop. 411,515 in 1851) 3650 persons died, while the deaths in the corresponding quarter of 1855 were 3051. In Manchester, where great numbers of people visited the exhibition, the deaths only exceeded by 79 the deaths in the summer quarter of 1855: in the Manchester, Salford, and Chorlton districts (pop. 439,797 in 1851) the deaths were 3460.

Mr. Leigh, of the Deansgate sub-district, makes the following judicious remarks, which deserve the careful consideration of the people of Manchester. Very sad there is the life of a child :—

Births 266; Deaths 254. The total number of deaths, exclusive of coroners' cases, is 224, and of this number 156 were of children under 5 years of age, leaving a total adult mortality of only 68. So large a proportion I have never before known. It is evident that whilst the ordinary circumstances affecting adult life have been to a considerable extent in abeyance, those militating against the very young have been in great activity. Of the children not less than 76 were carried off by diarrhœa, 14 by hooping-cough, 6 by scarlatina, 6 by measles, and one by small-pox. 87 of the children died under the age of one year. Neglected diarrhœa, close confinement to ill-ventilated rooms during hooping-cough, want of proper nutrition, and free administration of laudanum, producing marasmus and convulsions,—as well as hydrocephalus and congestion of brain, these must explain why, with a diminution of all the causes producing disease in adults, the mortality as a total is still so high.

An explosion of fire-damp at the Heys colliery killed 40 persons in the Ashton-under-Lyne district.

10,908 deaths were registered in YORKSHIRE, and the mortality is increasing in several districts; among which are Skipton, Hunslet, Leeds, Dewsbury, Barnsley, Sheffield, Hull, Sculcoates, and Scarborough. Diarrhœa, typhus, and small-pox are prevailing causes.

Except in Westmorland, the deaths in the NORTHERN COUNTIES have been somewhat in excess; in the aggregate they amounted to 5907. Diarrhœa has prevailed here as elsewhere, and has raised the mortality in Sunderland, Gateshead, and Newcastle. In some districts of Cumber-

land the mortality has been below the average. The Registrar of Low Longtown only registered 14 deaths.

The deaths in WALES and MONMOUTHSHIRE amounted to 5467. This number is below the average; and few epidemics are mentioned by the Registrars.

Fourth Quarter.—October, November, December.

The returns of the quarter are in some respects unfavourable, for the mortality is higher than the average mortality of the season. The Asiatic cholera, however, which was threatening in October, was arrested in its course; and the excess of deaths is partly referable to influenza, scarlatina, fever, small-pox, and diphtheria (throat disease). The number of births in the last three months of the year exceeds the average; but the marriages were below the average number for the quarter.

The state of the births and of the deaths on the aggregate of the year 1857, exhibits a favourable aspect; for while the births exceeded, the deaths were below, the average.

Marriages.—The Christmas quarter is always distinguished in England and Wales by the multitude of its marriages. *Ninety-one thousand six hundred and eighty persons* married in the last three months of 1857. The marriages were at the rate of 1·88 persons married to 100 living in a year; the decennial average rate of the corresponding quarter being 1·99.

Births.—The births of 161,016 children born alive, were registered in the last three months of the year 1857. This number exceeds by 3538 the births in the corresponding quarter of 1856. The births were at the rate of 3·30 per cent. per annum; the average of the previous quarters being 3·15. The increase of births is observable in London and in every other division except the Northern.

The births during the year 1857 amounted to 663,071; or to about 3·44 per cent. on the population.

Increase of Population.—As the births amounted to 161,016, and the deaths to 110,576, the natural increase of population was 50,440 in 92 days. The excess of births over deaths, and therefore the natural increase of the population of England and Wales, was 243,256 in the year 1857. In the United Kingdom the natural increase probably did not exceed 1000 daily.

28,673 emigrants sailed from the ports of the United Kingdom at which there are Government emigration officers; namely, 27,790 from four English ports, 879 from Glasgow and Greenock, and only 4 from Irish ports. The origin of the 28,673 emigrants was shown in 25,281 instances; and after distributing those not distinguished proportionally, it appears that 11,630 were of English origin; of whom 7366 sailed to the Australian colonies, 4210 to the United States of America, 20 to the North American colonies, and 34 to other places.

212,875 emigrants sailed from the ports of the United Kingdom in the year 1857, and of that number 78,560 were declared to be of English origin.

The number of English soldiers and sailors who have died abroad, cannot yet be brought into the account.

The Weather and the Price of Provisions.—The high average temperature of the summer was sustained through autumn until the end of the year. In November and December the temperature fell at Greenwich only to 46° and 45°; thus remaining 3° and 6° respectively above the average of each of the last two months of the 86 preceding years. The dew point for the quarter was 45·6°, or 4·7 above the average of the 16 previous years. The humidity was 92, saturation being expressed by 100; and the atmosphere was thus 5 points nearer to saturation than it

was on an average of 16 years. The rain-fall was 6·0 inches, or 1·1 inch below the average; although on October 22d nearly *three inches* of rain fell in several places of Norfolk, Cambridge, Hertford, Middlesex, Buckingham, Surrey, and Sussex. The barometer was above the average. Wheat was sown in favourable weather. The country was remarkably green at the end of December. At Ryde fuschias and strawberries were in bloom in December; raspberries were picked on the 20th.

The price of wheat was 52*s.* a quarter, while in the corresponding three months of 1855 and 1856 it was 79*s.* 4*d.* and 63*s.* 4*d.* The reduction was 34 and 19 per cent. respectively on the prices of the two previous years. The price of beef by the carcase at the Leadenhall and Newgate markets was $5\frac{3}{8}$*d.* per pound; while it was in the same seasons of 1855 and 1856 respectively $5\frac{6}{8}$*d.*, and $5\frac{5}{8}$*d.* a pound. Mutton was in the autumns of the three years (1855, 1856, and 1857) $5\frac{6}{8}$*d.* a pound. The potato crop partially failed, and the average price of York Regents at the water-side market, Southwark, was 140*s.* a ton, or 16lb. for a shilling. In the preceding autumns of 1855, 1856, the price of potatoes was 95*s.* and 100*s.* a ton. The price of potatoes was 40 per cent. higher than it was in the three autumn months of 1856. This high price necessarily limits the consumption of potatoes among the poorer classes of artizans in the towns; and the family of the labourer, whose crop has failed in the country, must suffer still more severely, as he has not the means of purchasing other commodities. The want of potatoes often induces scurvy, but no direct evidence of that disease is yet mentioned by the registrars. It is, however, often the masked cause of other maladies.

State of the Public Health.—110,576 deaths were registered in the last quarter of the year 1857. This number exceeds by 14,338 the deaths in

In deducing the results given in this Table the population up to 1855 has been increased in the same ratio which was observed between 1841-51. For the year 1856 and 1857 the increase of population has been obtained by taking the excess of Births over Deaths.

Names of the 125 Districts and 23 Sub-districts comprising the chief towns:—All the Districts of London (36), and Kingston, Richmond, Gravesend, Medway, East and West Maidstone Sub-districts, Canterbury, Thanet, Hastings, Brighton, Portsea Island, Alverstoke (Gosport), Southampton, Winchester Sub-district, Reading, Brentford, Edmonton, St. Clement Sub-district, Headington, Oxford, Northampton, Cambridge, West Ham, Colchester, Bury St. Edmunds, Ipswich, Yarmouth, Norwich, King's Lynn, Melksham, Salisbury, Exeter, Plymouth, East Stonehouse, Stoke Damerel (Devonport) Redruth, Bath, Bedminster Sub-district, Bristol, Clifton, St. Nicholas Gloucester, and St. John the Baptist Gloucester Sub-districts, Cheltenham, Hereford City Sub-district, Shrewsbury, Wolstanton, Stoke-upon-Trent, Wolverhampton, Walsall, West Bromwich, Dudley, Stourbridge, Worcester, Birmingham, Aston, Coventry, Leicester, Lincoln Home Sub-district, Radford, Nottingham, Derby, Stockport, East Macclesfield, West Macclesfield, and Sutton Sub-districts, Chester Castle and Chester Cathedral Sub-districts (Great Boughton), Liverpool, West Derby, Wigan, Warrington, Leigh, Bolton, Bury, Barton-upon-Irwell, Chorlton, Salford, Manchester, Ashton, Oldham, Rochdale, Haslingden, Burnley, Blackburn, Preston, Todmorden, Huddersfield, Halifax, Bradford, Hunslet, Leeds, Dewsbury, Wakefield, Ecclesall Bierlow, Sheffield, Bootham, Micklegate, and Walmgate Sub-districts (York), Sculcoates, Hull, St. Oswald and St. Nicholas Sub-districts (Durham Houghton le-Spring, Sunderland, South Shields, Gateshead, Newcastle-upon Tyne, Tynemouth, St. Cuthbert and St. Mary Sub-districts (Carlisle), Merthyr Tydfil, and Llangafelach and Swansea Sub-districts (Swansea).

the corresponding quarter of 1856; the mortality in the quarter was at the rate of 2·263 per cent. per annum, the average of the season being 2·167. The increase was equivalent to *one* on every 22 deaths. The increase of the mortality was greatest in the town districts or sub-districts; while the deaths in the country districts were considerably above the average. After correcting for increase of population, on the assumption that the population in town and country increased at the same rates as in the ten years 1841–51, the mortality in the towns appears to be at the rate of 2·702 per cent., in the country at the rate of 1·924 per cent. per annum. The excess over the average of the season was ·161 in the towns, ·052 in the country; it was therefore more than three times as great in the towns as it was in the country districts.

The proportion of the deaths in a given time to a given population is not an exact measure of its vitality; the mortality being very different at

different ages, and the proportional numbers of young and old being disturbed by excesses of births over deaths, and by emigration, the deaths in two equal populations may vary from differences in their composition as to age, without implying any real differences in the vitality. A disturbance may also be produced from disproportions in the sexes. Under ordinary circumstances the annual rate of mortality, however, at all ages, serves as a sufficiently accurate measure of the relative sanitary condition of the population; and where this is insufficient, the mortality at quinquennial or decennial periods of life may be separately determined.

The mortality of England and Wales in 1857 has been compared with the mortality of England and Wales in the ten previous years, and it may be compared with the mortality (22·36 per 1000) in the 19 years 1838–56. It is below that average. But is that average itself, it may be asked, the true standard? What is the natural rate of mortality among Englishmen, under favourable sanitary conditions? Under such conditions how long do they live? How many of them die annually? No direct answer can be given to these questions. No large body of Englishmen is

breathing pure air, living on a perfectly sound diet, free from all defilement, and free from vice, exercising duly the mind and body generation after generation. We can point to no model city—to no model caste; we can discover no model parish in the country. In the matter of health we are all very ignorant or desperately negligent. What courses then remain open to the inquirer? One only. The mortality of the districts of England in which the sanitary conditions are the least unfavourable, can be employed as the standard measure until happier times supply the real standard of vitality. Sixty-four districts in various parts of the country are found where the mortality of the people ranged on an average extending over ten years from *fifteen* to *seventeen* deaths in 1000 living. This is not an accidental event; the mortality only fluctuates in such places slightly from year to year, and the death rate under the same circumstances will not be exceeded. The people dwell in sixty-four districts extending over 4,797,315 acres, and their number at the last census was 973,070. Undoubtedly the sanitary conditions in which they live are in many respects favourable. They generally follow agricultural pursuits; and

they are scattered thinly over an open country, often on high ground, so that the impurities which they produce are dispersed and diluted in the air and water. They do not breathe each other's exhalations in theatres and churches. They do not drink water sullied by impurities. They do not drink poison in gin palaces. Their minds are not overwrought by dissipation, passion, intellectual effort. But visit their dwellings, and amidst much that is most commendable you will discover many sources of insalubrity. The bed-rooms are often small, close, crowded; personal cleanliness is not much studied; the dirty pig and the filth of various kinds lie here in close proximity to the house; the land there is imperfectly drained; in the winter, clothing, fuel, and food are scantily enjoyed in all large or improvident families; ignorance yields its baneful fruits; medical advice is ill supplied or unskilful. Yet the annual mortality per 1000 of this million men, women, and children, year after year, does not exceed 17. Is it not evident that under more favourable auspices the death rate would be still lighter? Under such sanitary conditions as are known, and with all the mechanical appliances existing, can we not imagine a community living a healthier life than these isolated people?

Without affirming on physiological grounds that man was created to live a destined number of years, or to go through a series of changes which are only completed in eighty, ninety, or a hundred years, experience furnishes us with a standard which can only be said to be too high. 17 in 1000 is supplied as a standard by experience. Here we stand upon the actual. Any deaths in a people exceeding 17 in 1000 annually are un-

---

natural deaths. If the people were shot, drowned, burnt, poisoned by strychnine, their deaths would not be more unnatural than the deaths wrought clandestinely by disease in excess of the quota of natural death; that is, in excess of *seventeen* deaths in 1000 living.

But it may be said that this standard cannot fairly be applied to determine the excessive mortality of large towns, which can never become so healthy as the country. How healthy towns may become we do not know. It is only proved that the population of parts of many towns experiences a mortality little above the natural standard; and that the prevalent diseases are referable to causes which evidently from their nature admit of removal. The question, however, is not, Does the excessive mortality admit of removal? but, Does it exist?—and these two questions have no logical connection. The existence of the excess is established by comparing the actual mortality with the standard. Then the chief causes of the excessive mortality are now ascertained; and if the people have done all they can to remove them, the residual excess may be held to be inevitable. But what is inevitable at one time and in one place is not inevitable at other times and in other places. It is therefore of the utmost importance to keep steadily in view all the excessive mortality over and above that which is implied in the great decree: "It is appointed unto man once to die." In London during the sixteenth century the population lived about twenty years on an average, and 50 died out of 1000 living; consequently the excess over 17 was 33. That this excess was not inevitable is now demonstrated; for with a great increase in number, the population

now lives about 37 years, and the mortality has fallen to 25 in 1000. Is the excess of 8 deaths a year among every 1000 living inevitable? This cannot be admitted for a moment, if we regard only the imperfect state of those sanitary arrangements which the public authorities of London have within their power. Nor can it be admitted that the excess of 5 deaths—or 22 deaths instead of 17—a year in every 1000 living is inevitable in England and Wales, with evidence before our eyes of the same violations of the laws of nature in every district.

Whether the causes admit or do not admit of removal, the fact, then, is incontestable, and must not be lost sight of, that the excess of deaths in England and Wales over those from causes which exist in sixty-four districts was 91,652 in the year 1857; for 419,815 persons died in that year, and only about 328,163 persons would have died had the mortality not exceeded the standard of 17 deaths in 1000 living. The portion of the loss of life falling during ten years in each of the 628 districts of the kingdom has been published in the Sixteenth Annual Report, and deserves to be carefully studied.

England is a great country, and has done great deeds. It has encountered in succession, and at times in combination, all the great powers of Europe; has founded vast colonies in America; and has conquered an empire in Asia. Yet greater victories have to be achieved at home. Within the shores of these islands the twenty-eight million of people dwell who have not only supplied her armies, and set her fleets in motion, but have manufactured innumerable products, and are employed in the investigation of scientific truths, and the creation of works of inestimable value to the human race. These people do not live out half their days; *a hundred and forty thousand* of them die every year unnatural deaths; *two hundred and eighty thousand* are constantly suffering from actual diseases which do not prevail in healthy places; their strength is impaired in a thousand ways: their affections and intellects are disturbed, deranged, and diminished by the same agencies.* Who will deliver the nation from these terrible enemies? Who will confer on the inhabitants of the United Kingdom the blessings of health and long life? Who will give scope to the improvement of the English race, so that all its fine qualities may be developed to their full extent under favourable circumstances? His conquests would be wrought neither by wrong nor human slaughter; but by the application of the powers of nature to the improvement of mankind.

Health of London in 1857.

England is not, like some of the states of antiquity, a city state. The population of the United Kingdom is diffused over nearly two hundred islands. The Metropolis, however, contains not only a larger population, but also a larger proportion of the population of the Kingdom, than the

* The annual number of deaths in the United Kingdom is about 616,000; and the number constantly sick is about twice the number of the annual deaths, or 1,232,000. If the annual rate of mortality per 1000 were reduced from 22 to 17, the deaths would fall to 476,000; the constantly sick to 952,000.

capital of any other country. London is not merely the metropolis of the United Kingdom. It is the metropolis of the Empire. The Colonies and India sustain part of its multitudinous people. It is a vast representative city, and it contains a mass of the best as well as a due share of the worst portion of English population.

It is six years since the people were enumerated; but it appears to be a law of this great city that it grows at rates not greatly varying in periods of ten years. Hence, if it be assumed that the population has continued to increase nearly 2 per cent. annually, as it did between the two last censuses, its numbers may be now estimated without risk of any important error.

London probably contains 2,667,917 inhabitants within its bounds, which circumscribe an area of *a hundred and twenty-two* square miles, that may be represented by a tract of land *eleven* miles long by *eleven* miles wide. The population in 1851 was *two millions*, and *one third* part of a *million*. According to the estimate, *one third* of a million of people have been since added to the people on that immense encampment.

The weekly Tables of the year 1857 supply us with the means of knowing the births and the deaths, and the causes of death, as far as they can be determined by the medical practitioners of the day, in fifty-three weeks, and in thirty-six districts of London, amidst the various atmospheric conditions of the seasons.

Every thing in the numbers relating to the Metropolis is on a grand scale. In the year 1857, fifty-nine thousand one hundred and three persons, a number surpassing the aggregate population of two or three county towns, died, and were buried in the churchyards and cemeteries. Eighty-nine thousand five hundred and seventy-seven children were born, and were registered in the same time.

The births registered exceeded the deaths in the year by 30,474. That was the natural increase of the population. Many of the children born in London emigrate, or go to other parts of the country; but the excess of immigrants over the emigrants was about 20,000, consisting of men, women, and children of all ages, who came to London chiefly from the south, or from the Midland counties, and in smaller numbers from Ireland, or from the counties north of the Humber, and even north of the Tweed.

The rate of mortality in the year was 2·22 per cent. The average of the last ten years being 2·45 per cent., the mortality of the year 1857 is less than that average by 1-eleventh part.

The mortality is not so low as it was in the year (1850) immediately after the epidemic of cholera; but it has now remained low for two years in succession, as the mortality of the year 1856 was at the rate of 2·18 per cent.; and the mean of the mortality of the two last years together is less than 22 deaths in 1000 living.

TABLE XXIII.—LONDON.—BIRTHS and DEATHS in the Ten Years 1848 to 1857.

ANNUAL MORTALITY per 1000	25·85	30·08	20·94	23·40	22·47	24·41	29·38	24·06	21·78	22·20

The reduction in the rate of mortality is not equally great in all the districts. Upon the average of the ten years the five groups of districts stand thus in the order of mortality:* the North districts (2·22), the West districts (2·28), the Central districts (2·44), the East districts (2·58), and the South districts (2·63). Taken in the same order, the mortality in these five groups of districts in 1857 was 2·12; 2·08; 2·29; 2·44; and 2·16. The reduction in the rates pervades the five groups; but it is most remarkable in the South districts. The fall is from 2·63 to 2·16. This modification of the sanitary condition of so large a portion of the population of the metropolis will be watched with interest in connexion with the improved water supply, and with the improvement in the drainage, which still remains defective, and counteracts to some extent the beneficial effects of the diffusion of the population over a wide area. The area of the South districts is 71·2 square miles, and of the Central districts 2·9 square miles; while the population of the South and of the Central districts in 1851 was nearly as three to two, or 616,635 and 393,256.

Small-pox was fatal in 156 instances. In the year 1856 the deaths from that disease were 531. The disease naturally fluctuates largely; but it is certain that if the whole of the children are vaccinated the number of deaths will be inconsiderable.

1341 (children chiefly) died of measles; from which 1479 also died in the previous year. 2318 died of this disease in 1845, when the mean temperature was 47°·6; and 600 in 1852, when the mean temperature was 50°·6.

Of scarlatina 1599 persons, chiefly children, died; less than in any of the previous 5 years. Whooping-cough was unusually fatal; the deaths by this disease were 2527, a number only exceeded in the zymotic class by the deaths from diarrhœa (3115), which was more fatal than in any previous year, except when cholera raged. 2343 of the deaths from diarrhœa were registered in the summer quarter, when 177 deaths from cholera occurred. The deaths in the year from cholera amounted to 214; and late in the year the epidemic cholera, which had prevailed at Hamburgh, appeared to be impending.

Typhus, typhoid, and relapsing fever, which are registered together, destroyed 2096 lives; and the mortality from this cause increased in the two last quarters of the year.

TABLE XXIV.—LONDON.—DEATHS in PUBLIC INSTITUTIONS, 1852–57.

	1852	1853	1854	1855	1856	1857

* The following Districts are comprised in these five groups:—*West Districts:* Kensington—Chelsea—St. George, Hanover Square—Westminster—St. Martin-in-the-Fields—St. James. *North Districts:* Marylebone—Hampstead—Pancras—Islington—Hackney. *Central Districts:* St. Giles and St. George—Strand—Holborn—Clerkenwell—St. Luke—East London—West London—London City. *East Districts:* Shoreditch—Bethnal Green—Whitechapel—St. George in-the-East—Stepney—Poplar. *South Districts:* St. Saviour—St. Olave—Bermondsey—St. George, Southwark—Newington—Lambeth—Wandsworth—Camberwell—Rotherhithe—Greenwich—Lewisham.

If we place together the deaths from small-pox, measles, scarlatina, whooping-cough, diarrhœa, and typhus, and divide by the corrected population, it is found that the mortality from these diseases was at the rate of about 41 to every 10,000 living in London.

7369 deaths are referred to phthisis, which is the most fatal disease of adults. Notwithstanding the elevation of the temperature, 5710 deaths are referred to bronchitis; many of which properly belong to the epidemic influenza which prevailed to some extent at the close of the year. Medical practitioners are too often apt to overlook the specific character of influenza, and to refer the deaths it occasions to one of its effects, bronchial congestion or inflammation.

118 mothers died of metria or puerperal fever, and 247 of the other diseases incidental to childbirth. Childbirth is much more fatal than it should be; but much less fatal than it was.

3520 deaths were referred to the six following heads: intemperance (99), privation (20), cold (4), neglect (11), want of breast-milk (347), and violence (1852). Many of the deaths by disease are induced and accelerated by the operation of the causes in this class. Of the violent deaths 99 were by poison, 266 were by burns and scalds, 315 by hanging and suffocation, 340 by drowning, 661 by fractures and contusions, 107 by wounds, and 64 by other violence.

10,079 deaths, or nearly a sixth of the whole number, took place in the public institutions of London, and of these 5714 occurred in the workhouses.

The peculiar meteorological phenomena of the year are the high temperature (51°1°) and the slowness of the wind's movements. The temperature was 2° above the average of the preceding 17 years; the wind, instead of moving at the average rate of 110 miles a day, passed over London at the rate of 81 miles during the 53 weeks. The rain-fall was 21·4 inches.

GREAT BRITAIN.

The Registrar-General of Scotland supplies me with a return of the births, deaths, and marriages in Scotland. It completes the Return for Great Britain.

The excess of births over deaths was 41,703 in Scotland, which contained about 3,072,725 inhabitants, so the rate of natural increase was about one per cent. The births were at the rate of 33·73, the deaths at the rate of 20·15 to 1000 living; the marriage rate was 13·88 persons married to 1000 living.

TABLE XXV.—LONDON.—DEATHS and METEOROLOGY, 1848–57.

YEARS.	Total Number of Deaths.	Mean Temperature of Air.	Dryness of Atmosphere.	Fall of Rain in Inches.	Mean Weekly Amount of Horizontal Movement of the Air.

1857	59568	51·1	5·4	21·4	568

WEEKLY AVERAGE OF 1857.						
1857	Number of Deaths weekly.	Mean Temperature of Air.	Average daily Range of Temperature.	Dryness of Atmosphere.	Fall of Rain in Inches.	Amount of Horizontal Movement of the Air in each Week.
		°	°	°		
First Quarter	1238	38·9	13·8	3·9	0·27	606
Second Quarter	1019	53·2	21·5	7·3	0·38	640
Third Quarter	1097	63·6	21·4	7·5	0·60	496
Fourth Quarter	1123	48·2	12·5	2·2	0·41	539

The excess of births over deaths was 284,959 in Great Britain, and the natural rate of increase was 1·273 per cent. The births were at the rate of 34·26, the deaths at the rate of 21·53 in 1000; and 16·12 persons out of 1000 married.

The births, deaths, and marriages of Ireland are not registered, so that the vital statistics of the United Kindom are left incomplete. Such a glaring defect does not exist in any other civilized state of Europe.

Her Majesty's Government introduced a Bill in the last Session of Parliament to wipe away the reproach, by securing a registration system for Ireland, and a measure for this purpose will probably be enacted and be in force ere many months have passed.

England and Wales -	37,324,915	15,104,312	19,304,897	159,097	318,194	663,071	419,815
Scotland - - -	20,047,462	8,112,627	3,072,725	21,314	42,628	103,028	61,925
GREAT BRITAIN -	57,372,377	23,216,939	22,377,622	180,411	360,822	766,099	481,740

Note.—The population of England and Wales has been obtained by taking the excess of births over deaths in the 4 quarters ending June 30th in each year; the population of Scotland has been deduced on the assumption that it increased in 1857 at the same rate as it did in each of the 10 years, 1841-51.

PROPORTION per Cent. of MARRIAGES, BIRTHS, and DEATHS to the Population of Great Britain, 1857.

	Areality.		To 100 Persons living.			
	Acres to a Person.	Hectars to a Person.	Marriages.	Persons Married.	Births.	Deaths.
England and Wales - -	1·93	·78	·824	1·648	3·435	2·175
Scotland - - - - -	6·52	2·64	·694	1·388	3·373	2·015
GREAT BRITAIN - -	2·56	1·04	·806	1·612	3·426	2·153

The total area of a country, divided by its population, gives what is here called the "Areality;" it is the average area to each person. The reciprocal gives the "density" of the population or the population to each acre, square mile or other measure.

TABLE XXVII *a*.—NUMBER OF DEATHS in the BRITISH ARMY during 1855, 1856, and 1857 (furnished to the Registrar-General by the Adjutant-General by direction of H.R.H. the Commander-in-Chief).

His Royal Highness the General-Commanding-in-Chief has favoured me with a return of the strength and the number of deaths in the army abroad, from which I have deduced the rate of mortality in the population of Great Britain, including its due share of the army abroad. And the mortality can now be compared with that of France. M. Legoyt, who directs, with such intelligence, the statistical operations of France, has supplied me with the official returns for the years 1856 and 1857. It will be observed that the people of France marry at nearly the same rates as the people of England; that the births to 1000 people living in the two countries are, 26 in France, and 34 in Great Britain; the deaths 23 in France, 22 in Great Britain. The mortality in the two countries rises and falls in the same years; but the rate was rather higher in France than it was in Great Britain.

TABLE XXVII*b*.—DEATHS OF OFFICERS AND MEN in the ARMY ABROAD, and Estimated Numbers belonging to Great Britain and to England and Wales, in each of the four Years 1854, 1855, 1856, and 1857.

YEARS.	Deaths of Officers and Men in the Army Abroad.	Estimated Numbers in Col. 2 belonging to	
		Great Britain.	England and Wales.
1	2	3	4
1854	7,780	4,287	3,496
1855	20,915	11,794	9,619
1856	2,580	1,496	1,222
1857	3,220	1,869	1,525

The number of Deaths in the cols. 3 and 4 were estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in the next Table derived from the Census Report, Occupations, Vol. I., Supplementary Tables, p. ccexlv., vi. *See* Table XXVII*c*.

TABLE XXVII*c*.—ARMY SERVING AT HOME AND ABROAD.

	1851
Officers and Men born in England - - -	67,647
,, ,, Scotland - - -	15,980
,, ,, Ireland - - -	53,149
,, ,, Foreign Parts - -	6,754
Total - - - - -	142,870

It was inferred also that the 76,444 officers and men abroad in the army in 1851 should be added to the population of the several parts of the United Kingdom, also in the proportions indicated in the above Table. Thus the population of England and Wales at home in 1851 was 17,927,609; add the proportion of the army abroad (86,196) belonging to England and Wales and its population becomes 17,963,805. The estimated population at home in 1856 was 19,045,187, and the population, including its share of the army abroad, was deduced from the following proportion:—

17,927,609 : 17,963,805 :: 19,045,187 : x = 19,063,644

Great Britain was dealt with on the same principles.

TABLE XXVII*d*.—ANNUAL RATE OF MORTALITY per Cent. per Annum, including the Deaths of Soldiers Abroad.

YEARS.	GREAT BRITAIN.	ENGLAND and WALES.	FRANCE.
1855	2·267	2·313	2·394
1856	2·085	2·068	2·306
1857	2·157	2·178	2·333

Births and Deaths of English Subjects at Sea.

I have unfortunately to repeat a sentence which appeared in my last report, to this effect: that the Registration Act has still been imperfectly complied with by the captains of ships, and the births and deaths at sea are not fully returned. 101 births at sea were reported to this office during the year 1857. Of the deaths at sea in 1857, only 352 have been reported to me by the captains and commanding officers of vessels; yet it appears from the accounts of wages and effects of seamen dying before the termination of the voyage, received by the Registrar General of Seamen, that 3444 died in that year. The mortality was at the rate of 19·5 in 1000. The health of this important class of men is of great importance, and it may be undoubtedly improved. Quarantine would be less costly if all vessels were kept clean, well ventilated, and well provided with sweet water and good food, including a due supply of lime juice.

Table XXVII*c*.—Return showing the Average Strength of the Army Abroad, in the Years 1855, 1856, and 1857. Furnished to the Registrar-General by desire of H.R.H. the Commander-in-Chief.

	1855		1856		1857

Artillery - - - - -	307	9,067	240	7,694	246	5,402
Engineers - - - - -	130	1,388	106	1,434	107	1,350
Total - - -	3,685	111,571	3,163	97,999	2,806	74,870

Table XXVIII.—England and France. Estimated Population, Registered Marriages, Births, and Deaths, in each of the Years 1854, 1855, 1856, and 1857.

	England and Wales.				France.			
	1854	1855	1856	1857	1854	1855	1856	1857
Estimated Population -	18,618,760	18,786,914	19,045,187	19,304,897	36,155,652	36,118,408	36,205,792*	36,292,663
Marriages - - -	159,727	152,113	159,337	159,097	270,906	283,846	284,535	290,349
Births - - -	634,405	635,043	657,453	665,071	923,461	899,559	952,116	920,832
Deaths - - -	457,905	425,703	390,506	419,815	992,779	936,833	835,017	842,961

The Population of England and Wales for 1854, 1855, 1856, and 1857 has been deduced by taking the excess of births over deaths since 1851, when the population was enumerated.

* According to the official Enumeration this Population includes 166,428 men, being the Effective Strength of the Army of the East in the Crimea in the month of January 1856. M. Legoyt has favoured the Registrar General with the Returns of France for the years 1856 and 1857. The Census is not taken on one day in France, as it is in England, and the date of the French Census is not stated.

Proportion of Marriages, Births, and Deaths to the Population of England and Wales, and in France, 1854–7.

	England and Wales.				France.			
	1854	1855	1856	1857	1854	1855	1856	1857
Marriages - - -	·858	·810	·837	·824	·749	·786	·785	·800
Persons married - -	1·716	1·620	1·674	1·648	1·498	1·572	1·570	1·600
Births - - -	3·407	3·380	3·452	3·435	2·554	2·491	2·630	2·563
Deaths - - -	2·352	2·266	2·050	2·175	2·746	2·594	2·306	2·323

The rate of mortality of females during the year 1854 in England was 2·273, and in France 2·721 per cent. In 1856 the female rate of mortality in England was 2·187, and in France 2·483 per cent.

The registers of the marriages of British Subjects before Her Majesty's Consuls abroad, received by me, pursuant to the Statute in the year 1857, amounted to 167.

I have been favoured by the Board of Trade with Returns relating to the mortality of Merchant Seamen. (Tables XXX. and XXXI.)

TABLE XXIX.—NUMBER of BIRTHS and DEATHS of ENGLISH SUBJECTS in BRITISH VESSELS AT SEA, reported by the Captains or Commanding Officers of Vessels, and entered in the "Marine Register," pursuant to Sections 21 and 26 of the Registration Act.

	TOTAL.	MALES.	FEMALES.
From 1st July 1857 to 31st Dec. 1857:—			
Births at Sea	750	380	370
Deaths at Sea	3821	3460	361
Whereof were reported during the years 1856 and 1857:—			
Births at Sea 1856	72	37	35
Births at Sea 1857	101	50	51
Deaths at Sea 1856	302	274	28
Deaths at Sea 1857	352	261	91

TABLE XXX.—MORTALITY of MERCHANT SEAMEN at SEA, in the 7 Years 1852–58.*

YEARS.	STRENGTH.	DEATHS.	MORTALITY. To 1000 living.
1852	159,563	2,305	13·8
1853	172,525	3,276	19·0
1854	162,416	2,772	17·1
1855	166,537	3,318	19·7
1856	173,918	3,549	20·4
1857	176,387	3,444	19·5
1858	177,832	3,486	19·6
In the 7 years 1852–58.	1,191,178	22,050	18·5

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Merchant Seamen. This return does not include seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls or officers of the hospitals to which such men are sent; accounts of their effects are sent direct to the Board of Trade.

TABLE XXXI.—RETURN showing the NUMBER of DEATHS from VARIOUS CAUSES on board BRITISH VESSELS engaged in Voyages between the United Kingdom and the Foreign Parts enumerated in the Year 1857.

	Total Number of Ships including repeated Voyages.	Total Number of Men comprising Crew.	Deaths. Cholera.	Accident.	Disease.	Fever.	Total Number of Deaths from all Causes.	Per-centage.

* For the names of the religious bodies or other description given on the registration of these buildings, see next page.

(Table XXII.), must previously be certified as places of meeting for public worship.

The certification of 481 places of meeting for public religious worship was completed during the year, making a total of 8194 buildings on the register on 31st December 1857. In addition to the existing places of worship certified in this office, a large number had been previously certified according to law, during the period between the passing of the Toleration Act in 1688 and 30th June 1852 in the Courts of the Bishops and Archdeacons, and to Justices of the Peace in General or Quarter Sessions. All uncertified places of worship are now certified exclusively to the Registrar General. At the census of 1851, returns as to accommodation and attendance were obtained from about 20,400 places of worship then existing and not belonging to the Established Church. The denominations whose buildings have been certified since June 1852 are distinguished in Table XXXIII.

Non-Parochial Registers.

In the year 1836 Commissioners were appointed to inquire into the state, custody, and authenticity of all registers or records (not being parochial) of births or baptisms, deaths or burials, and marriages duly

* Lewisham and Hampstead were added to London in 1847. In this return London has been corrected for these Districts in 1845-6 by adding an estimated number of Births in and out of Wedlock, on the assumption that the numbers in those two years bore the same proportion to the Total Births in London as in the subsequent years 1847-50.

† In 1847 the District of Dudley was for the first time included in *Staffordshire*; in this return, for the sake of uniformity, it has been included in the same County for the two previous years 1845 and 1846.

ceedings. A large number of the Nonconformist congregations possessed of records of the nature referred to gladly availed themselves of the opportunity thus offered, and transmitted their registers to the Commissioners. About 7000 register books, from upwards of 3600 religious congregations, besides about 1500 registers from the Society of Friends, from Dr. Williams's library, and from other sources, were, after careful examination and inquiry, pronounced to be authentic and admissible. The Commissioners in their report recommended that these registers should be kept together in a secure place of deposit, under the care of the Registrar General; that the registers should be then deemed to be in legal custody; that they, or certified copies of them, should be receivable as evidence in all courts of justice; and that such certified copies or extracts should be given to the public, under certain regulations, upon payment of a moderate fee.

These several recommendations were embodied in an Act of Parliament passed in 1840, "For enabling Courts of Justice to admit Non-"Parochial registers as evidence of Births or Baptisms, Deaths or "Burials, and Marriages" (3 & 4 Vict. c. 92.); and, pursuant to its provisions, all the registers examined and certified by the Commissioners are now in my custody at this office, where searches and certified copies are granted.

Subsequently to the close of the labours of the Commission, a considerable number of additional registers belonging to the Society of Friends, which were overlooked when the others were collected, were discovered; and it was the earnest desire of that body to have them also duly authenticated and placed in the same custody, and on the same footing, as the others.

In order to accomplish this object, and at the same time to afford to other religious communities or to individuals who might be in possession of any registers of a like nature, an opportunity of securing an extension to them of benefits similar to those conferred by the Act above cited, Her Majesty was graciously pleased to issue a further Commission of Inquiry.*

The first proceeding of the newly appointed Commissioners was to make known amongst the various Nonconformist bodies the objects of the Inquiry. This was effected by public advertisement and by circular letters addressed to the acting representatives of the several associations of Protestant Dissenters, to the proprietors of burial grounds closed by Orders in Council, and to all other persons presumed or known to have non-parochial registers in their possession. Applications were also made with respect to the registers of the Roman Catholics and of the British Jews, but both of those bodies, for the reasons assigned on their behalf by Cardinal Wiseman and Sir Moses Montefiore respectively, declined to part with the custody of their registration records.

Of the whole number of registers transmitted to the Commissioners, 303 were judged to be accurate and faithful, and such as might be advantageously legalised as evidence by an Act of the legislature. They included 120 volumes and bundles belonging to the Society of Friends, 45 registers of Independent congregations, and smaller numbers from the Wesleyan Methodists, the Baptists, Lady Huntingdon's Connexion, and a few other sects, besides the original registers kept by the respective chaplains of the royal hospitals at Greenwich and Chelsea, and the Foundling Hospital, which were deposited by the governors of those

* The Commissioners were Mr. Samuel Gale, Mr. John Sutherden Burn (members of the former Commission), Mr. R. Lush, Q.C., Mr. W. P. Parken, Mr. Horace Mann, Mr. Hull Terrell, and Major Graham. Mr. James T. Hammack acted as Secretary to the Commission.

institutions. These 303 registers, comprising upwards of 270,000 entries, have been placed in my custody, pursuant to the provisions of the recent Act of 21 Vict. c. 25., by which they are made receivable in evidence in all courts of justice upon the same footing as the non-parochial registers previously deposited in the General Register Office.

The diseases and other causes of death in the year 1857 are briefly discussed by Dr. Farr in a letter addressed to me which will be found in the Appendix.

The Appendix also contains a new Life Table for *Females*, corresponding with the ENGLISH LIFE TABLE No. 2. for *Males* already published*. It has been computed under the immediate superintendence of Dr. Farr, and is founded on the ages at which the entire number of deaths of females occurred in England and Wales according to the registers of the seven years ending 1844.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

* The *Registration Counties* consist of groups of entire Registering Districts; which Districts are, in general, identical with the Law Unions. As the principle adopted has been to County with the County in which either the principal town or greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of *District or Union which extends into* more than one Counties proper.

* A change was made in the constitution of these districts on the 4th November 1857, by the transference of the parish of Guilsfield (with a population of 2,897 in 1851) from the Pool sub-district of Montgomery district (608) to the Llansaintffraid sub-district of Llanfyllin district (609).

† The number of Districts is increased to 629 by the formation of the following new districts: Mile End Old Town (24 *b*), Dulverton (313 *b*), Whitchurch (363 *b*), Great Ouseburn (492 *a*) Wetherby (492 *c*), and Hemsworth (504 *b*).

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 630 in number, are arranged according to their local position under the Registration Counties.

† For a table of the Deaths in the principal *Public Institutions* situated in the Districts of London *see* pages 33-4.

‡ The Hamlet of Mile End Old Town was severed from the Stepney Union and District, and constituted a Superintendent Registrar's District on 1st Oct. 1857. The Births and Deaths registered from 1st Jan. to 30th Sept. 1857 are added to the returns for Mile End Old Town; so that the numbers given for that District as well as for Stepney represent the registration for the entire year within the *present limits*.

Note.—Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes *that the Births in the District, instead* of exceeding the Deaths were, in fact, less than the Deaths to the extent stated.

NOTE.—The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose.

The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse belonging to *another* District or Union is included.

Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

The Excess of *Deaths* over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

For the number of Deaths in the Hospitals, Workhouses, and other principal Public Institutions in London, see pp. 83-4.

* The Excess of *Deaths* over Births in these Sub-districts is attributable to the fact of Hospitals for the sick being situated in them. For the number of Deaths in Hospitals, &c. see Table pp. 83-4.

† Mile End Old Town was constituted a new Superintendent Registrar's District on its severance from the Stepney Union, October 1857. *As the limits of the two Sub-districts remain unchanged, the numbers for the entire Year are here returned.*

ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state here that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 107 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a *few persons*, or *diseases* which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Thus *mumps* was the cause of 88 deaths (Males and Females) in the year 1857, and scarlatina of 14,141. The mortality of

* This was the death of a labourer aged 29 at Keyham Works, near Plymouth; the Cause of Death is returned "Typhus Icterades Fever 1 week, Coma; Certified."

(continued at page 126.)

Causes of Death at different Periods of Life, in the Year 1857.

scarlatina, deduced by dividing the deaths from that disease, *plus* 88, by the total population of England, will be found to differ little from the mortality from scarlatina alone. Where it is desired, partial correction however can now be made by means of the following Supplementary Tables, containing many of the deaths from distinct diseases, such as mumps, glanders, epistaxis, piles, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of disease, such as softening of the brain (necrencephalus), which are returned in many cases under other heads, as paralysis, &c.

These Tables are an extension of the Tables of Causes of Death in England, pp. 120–123.]

Note.—In calculating the average annual rate of mortality from All Causes in London a correction has been made by distributing the deaths in Hospitals proportionally over every district.

* The Holborn and West London Districts are combined in the calculations of mortality in the ten years 1841-50 in consequence of a portion of West London having been added to the Holborn District in 1846. For similar reasons a few other districts in the kingdom will be found grouped together so far as regards the average rate of mortality during the same ten years.

† Excluding Fort Pitt and Fort Clarence, the annual mortality in the Medway District was 24 to every 1,000 persons living.

Population 1851, Average Annual Rate of Mortality from All Causes in the Ten Years 1841–50, and Deaths from several Causes in the Year 1857, in the Districts of England—*continued*.

II.—SOUTH EASTERN COUNTIES—*continued*.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND in 1857, by WILLIAM FARR, Esq., M.D., F.R.S.	163–176
ENGLISH LIFE TABLE, No 2. FEMALES; with TABLES OF VALUES OF LIFE ANNUITIES, PREMIUMS, &c.	177–204

Letter to the Registrar General on the Causes of Death in England, by William Farr, Esq., M.D., F.R.S.

Year 1857.

Sir,

I beg to submit to you the result of the inquiry into the causes of the deaths which were registered in England and Wales during the year 1857.

In conformity with the Act of Parliament the causes of death were specified in 414,835 instances, more or less distinctly, more or less correctly; in 4980 cases no cause was assigned.

The mortality of the year 1856 was unusually low; the slight increase in 1857 was chiefly due to diarrhœa and to bronchitis, induced probably by influenza.

The meteorology of the seasons of the year 1857 was distinguished by a general elevation of temperature at all the stations. The Greenwich observations show a temperature of 51·1°, or an excess of 2° above the average of the preceding 17 years; and the mean temperature, ranging from 53·7° at Helston on the southern coast to 47·6° at North Shields (lat. 55°), was probably every year above the average. The heat was intense in June, and the 28th day of that month was the hottest day observed since 1846. August was the hottest month on record. The air over London, and probably over other parts, was unusually stagnant; it passed over Greenwich at the rate of 3¼ miles an hour, whereas the average in preceding years was 4½ miles an hour. The wind is an important sanitary element; as it is capable of bringing and of carrying away the organic elements which are the seeds sometimes of zymotic diseases. The high temperature and the stagnancy of the air over cities, are both calculated to favour the prevalence of the diarrhœas, which were unusually fatal; and perhaps also to diffuse, if not to develop, the new variety of disease which was often called "sore throat," "croup," and "scarlatina," on its first appearance, but is now known as diphtheria. The rain-fall varied from 21·4 in. in Greenwich, and 21·3 in. in Whitehall, where the least was collected, to 41 and 42 in. in the higher regions of Stonyhurst and Allenheads. The rain-fall at Greenwich varied little in the last three years; and in 1857 was below the average (24 in.) Rain fell on 161 days. The mean dew point was higher, and the mean degree of humidity was lower, than it was in the two previous years.

The average price of wheat was 56*s.* 5*d.* a quarter. It fell to that figure from 69*s.* 2*d.* in 1856. Beef was slightly dearer, mutton cheaper, in the London markets. The potato crop was injured by the disease, and the price of potatoes rose; the York regents were 120*s.* a ton on an average at the waterside market, Southwark, while they had been 86*s.* in the previous year. I refer to the Tables in the quarterly summaries for further information on this subject.

I. Causes of Death.

Besides 4980 deaths of which no causes were assigned, 3403 deaths were registered indefinitely as sudden deaths, on which inquests were generally held. The deaths classified under more definite heads amounted to 411,432.

(1.) *Zymotic diseases.*

90,414 persons died of zymotic diseases; and the mortality by them was at the rate of more than 4 deaths in the year to every 1000 living; the mortality by all causes being at the rate of 22 nearly in 1000. Of every 100 deaths 22 were by zymotic diseases.

Of small-pox 3936 persons died; or more by 1659 than died of this disease in the previous year. The Vaccination Act undoubtedly contributed to reduce the mortality by small-pox in the four previous years; but it is still imperfect in several of its provisions, and requires amendment. Measles was less fatal than usual; whooping-cough destroyed 10,138

TABLE (1).—CAUSES OF DEATH registered in ENGLAND in each of the Eight Years 1850—1857.

children. Of all infantile zymotic diseases, except one, scarlatina was the most fatal; 13,831 persons died of that disease, including cynanche maligna. The mortality from croup also exceeds the average. Diphtheria on its first appearance was confounded with these two diseases; under which several cases of that malady were evidently registered. 53 males and 35 females died of *mumps*, and like diphtheria were only temporarily classed under scarlatina, as is explained in the supplementary Table p. 124.

Diarrhœa was fatal to 21,189 persons, dysentery to 1698, and cholera to 1150. Thus the deaths from diarrhœa were more numerous than the deaths from that disease in 1854, when the cholera was epidemic. The

---

TABLE (1).—Causes of Death registered in England in each of the Eight Years 1850—1857—*continued.*

influence of a high temperature in producing this disease is as evident as its influence in accelerating the decomposition of organic matter.

Of the 1576 deaths under erysipelas, 69 died of phlebitis, 1 of hospital gangrene, 2 of necusia (dissection wound), 3 of glanders, 13 of erythema, *one* of irritation from a blister, 9 from porrigo; leaving 1478 deaths from erysipelas, supervening in many cases under unfavourable sanitary conditions on wounds and injuries.

TABLE (2).—ENGLAND. CAUSES OF DEATH. To 1,000,000 PERSONS LIVING, the DEATHS from each Class of Causes, and from each Cause, in the Years 1855, 1856, and 1857.

	CAUSES OF DEATH.	Deaths to 1,000,000 *Persons living.*

	106 Other Violence	22	21	25

The Table may be read thus:—In 1856 to every 1,000,000 Persons living there were 20,504 deaths from All Causes (rather more *than 20 in 1000); 121 deaths from small-pox*; 379 from measles; 752 from scarlatina, and so on.

The reported deaths by syphilis have been more numerous in the last four years than they were previously.

Typhus, typhoid fever (*typhia*) and relapsing fever (*typhinia*) are not accurately distinguished in the returns; in the aggregate 18,249 persons died of these fevers.

Only ***three*** persons died of hydrophobia in all England. The number of deaths from this fearful disease was 5 in the previous year; 14 in the year 1855, and in some of the previous years as many as 25.

TABLE (3).—ENGLAND. CAUSES OF DEATH. To every 1,000,000 *Deaths from All Causes*, the proportional Numbers from each Class of Causes, and from each Cause, in the Years 1855, 1856, and 1857.

	CAUSES OF DEATH.	Proportional Number to 1,000,000 Deaths.		
		1855	1856	1857
	ALL CAUSES	1,000,000	1,000,000	1,000,000

	102 Hanging and Suffocation	3,130	3,406	3,380
	103 Drowning	5,889	6,048	6,767
	104 Fractures and Contusions	13,025	14,081	12,868
	105 Wounds	1,470	1,563	1,458
	106 Other Violence	967	1,042	1,155

The Table may be read thus:—To 1,000,000 deaths from All Causes in 1856 there were 5,902 deaths from small-pox; 18,464 from measles; 36,699 from scarlatina, and so on. By placing a decimal point before the three figures on the right hand, the Proportion will be shown to 1,000 deaths; thus, there were 5·902 deaths from small-pox to every 1,000 deaths from All Causes.

(2.) *Constitutional diseases.*

84,458 persons died of the class of constitutional diseases; including 65,762 deaths by tubercular diseases, and 18,696 by diseases of uncertain and variable seat; the mortality by these maladies was 4·4 in 1000 of the living population. Of 100 deaths, 20, or one in 5, on an average were the result of constitutional diseases. The mortality from this class of diseases fluctuates little from year to year; but the mortality from consumption was rather less in the two last than it was in the two previous years.

(3.) *Local diseases.*

The human frame is so constructed, that certain diseases of its parts are fatal. 158,899 persons died of local diseases. The most important organs are naturally those of which the derangements are most fatal. Thus 52,103 persons died of diseases of the brain and of its appendages—

TABLE (4)—ENGLAND. CAUSES OF DEATH in the Year 1857, arranged in the order of Mortality.

CAUSES OF DEATH.	Number of Deaths registered in the Year 1857.	*Proportional Number* from each Cause to 1,000,000 Deaths from All Causes.*
Phthisis (or Consumption)	50,106	120,785
Age	26,847	64,719

Disease of Pancreas	15	36
Hydrophobia	3	7

* The causes of 4,980 deaths were not specified; in calculating the proportional numbers they have been distributed pro rata over all the causes in the Table.

the nervous system. Apoplexy and paralysis are generally the results of organic lesions; and they are nearly equally fatal. 2193 deaths were referred to epilepsy; 24,532 to convulsions. The 102 deaths by tetanus must have been indirectly the results of injuries; and the disease is rarely idiopathic.

14,784 deaths were the results of diseases of the heart and blood vessels. And the 8452 fatal dropsies in another class, were oftentimes the consequences of obstructed circulation.

Inflammation and other diseases of the respiratory organs were fatal to 58,320 persons. The diagnosis in young children and in old persons is not very certain; but in this year 25,588 deaths are referred to bronchitis, (inflammation of the air tubes), 23,457 to pneumonia, affecting the air cells and the substance of the lung. Seven years ago the proportions were reversed, and the absolute mortality by bronchitis was much below the present standard.

Of diseases of the digestive organs 23,532 persons died, including 3992 by teething, 3412 by enteritis, 1411 by peritonitis, and 814 by hernia, often from neglecting to wear a truss; 15 deaths were ascribed to disease of the pancreas, 6768 to diseases of the liver, and 73 to diseases of the spleen.

The diseases of the other organs are much less frequent and fatal. 4313 deaths were referred to the urinary organs. In few of these diseases is there any fluctuation except in nephria (Bright's disease), from which the deaths have increased progressively; they were 430, and rose to 983 in seven years.

3072 deaths were referred to the organs of generation, including 1951 by childbirth. Metria supervening on childbirth was fatal to 836 mothers; thus raising the total deaths by childbirths to 2787. The happy decrease of the danger of childbearing continues; 42 mothers died to every 10,000 children born alive in 1857; in 1847 the proportion was 60; in 1848 it was 61; and since that date the mortality has regularly declined year by year, leaving the average loss in the ten years, 51 mothers to every 10,000 children born alive.

Death in childbirth happens in many ways, and different causes operate with variable force at different ages. Thus flooding increases rapidly with age, so does rupture of the uterus. The organ wears out. Puerperal

---

TABLE (5.)—MORTALITY OF WOMEN BEARING CHILDREN at different Ages in the Three Years 1855, 1856, and 1857.

Age of Mother.	Estimated Number of Women bearing Children, 1851.	Deaths distinguished in the Three Years 1855, 1856, and 1857.				Annual Rate of Mortality. To every 100 Mothers bearing Children, the Number of Deaths by			
		Placenta Prævia and Flooding.	Puerperal Mania.	Puerperal Convulsions.	Rupture of Uterus.	Placenta Prævia and Flooding.	Puerperal Mania.	Puerperal Convulsions.	Rupture of Uterus.
15—25	107,440	127	52	295	10	·068	·028	·158	·005
25—35	338,730	458	119	213	44	·091	·024	·042	·009
35—45	166,140	561	42	106	46	·222	·017	·042	·018
45—55	7,545	35	4	6	2	·282	·032	·048	·016
15—55	609,845	1181	217	620	102	·123	·023	·065	·011

In calculating the annual mortality a correction has been made for increase of population. The annual rate of increase (females aged 15–55) 1841-51, was ·01200, and it has been assumed that the number of women bearing children increased at a uniform rate at each of the ages in the Table. At the age 15-55 there were 5,672 deaths from childbirth and 2,982 from metria in the 3 years 1855–57. Of the 5,672 deaths from childbirth only 2,801 were designated under any of the definite headings of the class (*see* Supplemental Table of Causes of Death); and the deaths under each of the headings in the above Table are assumed to have been understated in the same ratio, and raised accordingly in calculating the mortality. A similar correction has been made for each age in the Table.

convulsions are much more fatal in the first period (all 15–25), when the muscular irritability is greatest. Puerperal mania is probably of most frequent occurrence in the first period, but it is most fatal in the last period. ***Metria*** (or childbirth fever) is much more fatal in the first periods of life, and in this respect it resembles fever.*

The organs of locomotion, if we exclude the scrofulous and cancerous diseases of the bones, are seldom the seats of fatal diseases; the body, in fact, can live on after its limbs are lost; and the superiority of the brain over muscular power, renders life desirable even under these losses. The diseases of this class were fatal in 2028 instances.

The diseases of the integumentary system are less common than they were in the middle ages, when England was covered with hospitals for lepers. The people, however, still neglect the skin; and its excretions frequently absorbed, undoubtedly give rise to some forms of zymotic disease. The shower bath with warm, tepid, or cold water, according to circumstances, is not used by people who wash their hands and faces every day more than once.

The deaths from carbuncle were 252, and have varied little in number since 1852.

TABLE (6).—MORTALITY from METRIA at different AGES, in the 3 Years 1855, 1856, and 1857.

Ages of Mothers.	Estimated Number of Women bearing Children 1851.	Deaths from Metria in 1855–57.	Annual Number of Deaths from Metria to 100 Mothers living.
15–25	107,440	341	·246
25–35	328,730	1,202	·194
35–45	166,140	797	·151
45–55	7,545	43	·175
15–55	609,845	2,983	·154

In calculating the annual rate of mortality, a correction has been made for increase of population.

TABLE (7.)—DEATHS of WOMEN in CHILDBIRTH in the Ten Years 1847–57.

YEARS.	Number of Deaths from			Deaths of Mothers to 10,000 Children born alive.

* This branch of medicine is cultivated in the present day with extraordinary zeal—by men of superior ability; and a society has been recently formed for the cultivation of *this important art.*

(4.) *Diseases of Growth, Nutrition, and Decay, or Developmental Diseases.*

1035 persons, chiefly children, died from the imperfect development of parts of their structure; 350 of the blue disease (cyanosis); 325 from non-closure (spina bifida) of the spine; and 360 from other malformations.

26,847 deaths, or 65 in every 1000, were referred to *old age.*

(5.) *Violent Deaths.*

15,027 deaths were referred directly to external causes. The action of all these causes is not attended with any violence, but it is equally fatal when it attains a certain degree of intensity. Thus intemperance in drink and in food acts as a slow poison; and the 294 deaths so registered, as well as 484 deaths by delirium tremens, together exceed in number the deaths from all other poisons. But intemperance induces various diseases which appear under other heads; and it is difficult to over-estimate the injury to the public health arising directly and indirectly from this cause. Privation, to which 52 deaths were ascribed, was happily less fatal than in previous years. The want of breast milk is always fatal to many infants, who cannot be deprived of their natural food with impunity.

The deaths by cold may serve almost to measure the temperature of the year: thus the temperature of 1855 was low, and the deaths by cold were 195; the temperature of 1857 was high, and the deaths by cold were 45.

The deaths by burns and scalds followed the same order; in the cold year they amounted to 3177, and in the warm year to 2717. In the four years out of nine, when the annual deaths by cold exceeded 100, the deaths by burns and scalds were 2826 on an average; in the four years when the annual deaths by cold were less than 100, the deaths by burns and scalds were 2710 on an average.

The additional fires in cold weather, and the disposition to approach them without due precaution, accounts for the apparent anomaly.

The deaths by poisons are not always discovered under our imperfect system of police; yet 428 deaths were ascertained to be by poison. 2807 persons were drowned. It exceeds the number in previous years. The deaths by drowning at sea are not registered. 1402 persons died by hanging or suffocation; 605 lost their lives by wounds; 5338 died of fractures and contusions from mechanical injuries of various kinds. The number of deaths of this class reached the highest point in the year 1854; and since that year the decline has been progressive. A large proportion of these deaths is due to negligence, and to the absence of precautions against the dangers which the new mechanical agency of steam has introduced.

Prevalence of Epidemics.

It is a peculiarity of zymotic diseases that they are distributed irregularly over time and space. The recurrence of cholera as an epidemic is an example of the first, the Table (pp. 148–159) offers many examples of the second irregularity. Thus in the West Midland Counties (Gloucester, Hereford, Salop, Stafford, Worcester, and Warwick), 1434 persons died of small-pox; in London 156; in the West Midland Counties, on the other hand, 784 persons died of whooping-cough, in London 2527. The small-pox was fatal to 86 persons in the three counties of Gloucester, Hereford, and Salop, and to 1348 in the three counties of Stafford, Worcester, and Warwick adjacent. Whooping-cough was not diffused equally; its ravages were visible in a few districts of Gloucester, Stafford, and Warwick; few children died from the disease in Hereford, Salop, and Worcester. We may conceive the different kinds of zymotic matter distributed in clouds over the country, sometimes stretching over the whole atmosphere of the island, at other times brooding over isolated but generally dense populations, in unfavourable sanitary conditions. Scarlatinine is found in one place, varioline in another; rubeoline,

pertussine, enterine, cholerine, influenzine, typhine, and the other organic elements being developed, and prevailing, seldom simultaneously, but in recurring successions.

A series of tables, such as that at page 148–159, will perhaps supply the means of determining the laws of epidemic succession; in the meantime they serve to express the facts as they were observed.

It may be useful to indicate some of the localities in which the principal epidemic diseases found their victims in the greatest numbers, in the year 1857.

Small-pox was extremely prevalent and fatal in several districts in South Staffordshire, and in contiguous parts of Worcestershire; it caused 276 deaths in Wolverhampton*, 69 in Walsall, 171 in West Bromwich, 251 in Dudley, and 74 in Stourbridge. In Birmingham and Aston, where the neglect of vaccination has been reported by the registrars, it was fatal in 285 cases; in Liverpool and West Derby the deaths ascribed to small-pox were 188, in Prescot 118, in Manchester and Salford 113, in Sheffield and Ecclesall Bierlow 235, in York 76, in Whitehaven 75. In Cardiff, where the efficient drainage of the town has been effected, and the mortality from other epidemic diseases was light, 215 deaths were caused by small-pox.

The mortality from *measles* in the whole country was less than in the previous year, but the disease was more fatal in Hants, Devon, Salop, Stafford, Warwick, Northumberland, and a few other counties. Measles caused 1341 deaths in London, 33 in Portsea Island, 49 in Southampton, 43 in Bridport, 33 in Plymouth, 39 in Tavistock, 48 in Tiverton, 46 in Barnstaple, 42 in Penzance, 35 in Madeley (Salop), 107 in Wolverhampton, 105 in Walsall, 101 in West Bromwich, 164 in Dudley, 183 in Birmingham and Aston, 70 in Coventry, 77 in Leicester. The disease was fatal to 122 in Liverpool and West Derby, 71 in Manchester, 50 in Blackburn, 63 in Dewsbury, 103 in Sheffield and Eccleshall Bierlow, 165 in Hull and Sculcoates, 92 in Gateshead, and 133 in Newcastle-upon-Tyne.

The deaths from *scarlatina* (14,229) were nearly the same in 1857 as in the previous year (14,160). In classifying the fatal diseases diphtheria is referred to this head, and its prevalence as an epidemic was reported early in the year by the registrars in various parts of the country, who usually described it as "throat disease," "malignant sore throat," and by other like terms. Scarlatina, including diphtheria, caused 1599 deaths in the districts of London, 31 in Farnham (which includes part of the Aldershot camp), 33 in Tunbridge, 60 in Eastry (including Deal and Sandwich), 40 in Uckfield, 32 in Brighton, 122 in Southampton, 66 in Oxford and Headington, and 50 in Huntingdon. In the Eastern Counties several districts suffered. In Maldon, where, in the words of the registrar, "there was a terrible epidemic of typhus and of malignant sore throat," 51 fatal cases occurred; in Norwich 215, in Forehoe 65, and in Depwade 46. Few districts in the South Western Counties escaped; and the disease was very prevalent in Weymouth, where it caused 146 deaths, in Bridport (58 deaths), Plymouth (107), Barnstaple (83), Bideford (115), Liskeard (89), Truro (43), and Yeovil (48). In Bristol and Clifton there were 123 deaths; in Madeley 40, in Leek 93, in Wolverhampton 107, in Walsall 123, in West Bromwich 110, in Dudley 76, and in Birmingham and Aston 229. Leicester suffered to the extent of 109 deaths; and in the Hayfield district, Derbyshire, there was a severe epidemic, which proved fatal in no less than 208 cases. Every district in Cheshire and Lancashire was visited by this disease; Liverpool and West Derby lost 805 lives, Manchester and Salford 383, Ashton-under-Lyme 163, and Blackburn 231. In Yorkshire several districts suffered; there were 171 fatal cases in Skipton, 164 in Huddersfield, 193 in Halifax, 146 in Bradford, and 169 in Hull and Scul-

* The Superintendent Registrar's district is in all cases referred to except where otherwise stated.

coates. In the Northern Counties, Durham had 70 deaths, Sunderland 105, Newcastle-upon-Tyne 67, and Tynemouth 100; in Wales, St. Asaph had 62 deaths, Llanrwst 77, Festiniog 65, Bangor 51, and Anglesey 73.

Whooping-cough, which was more fatal than in 1856, caused 10,138 deaths. The principal visitations of this epidemical disease were in Brighton (58 deaths), Southampton (56), Bedford (46), Redruth (116) and Chard (53), Bristol and Clifton (102), Wolverhampton (102), Dudley (60), Birmingham and Aston (123), Liverpool and West Derby (664), Manchester and Salford (395), and Sheffield (112). The districts of the Northern Counties and Wales were, with a few exceptions, exempt from severe attacks of the disease.

Diarrhœa began to prevail in London early in July with more force than usual at that period of the year; several cases of cholera and choleraic diarrhœa also occurred. In the week ending July 25th, 259 deaths from diarrhœa were registered in London, and the number rose to 302 in the following week, after which it slowly declined. The disease was fatal in London in the year to 3115 persons. In the South Eastern Counties it was prevalent in Kingston (40 deaths), Dartford (41), Medway (80), Maidstone (52), Thanet (49), Brighton (107), Portsea Island (96), Southampton (52). In the South Midland Counties, there were 72 deaths in Brentford, 78 in Northampton, 50 in Bedford, 50 in Biggleswade, 98 in Luton. In the Eastern Counties, West Ham lost 81, Ipswich 51, Yarmouth 75, and Norwich 138. The districts of the South Western Counties were comparatively exempt, excepting Plymouth (79 deaths), Stoke Damerel (55), Penzance (47), and Bath (65). In South Staffordshire diarrhœa held its place with other epidemics, and proved fatal in 280 cases in Wolverhampton, 130 in Walsall, 137 in West Bromwich, and 326 in Dudley. No less than 795 persons succumbed under this disease in Birmingham and Aston; 145 in Coventry, 201 in Leicester, 187 in Nottingham, 233 in Stockport, 954 in Liverpool and West Derby, 866 in Manchester and Salford, 243 in Ashton, and 234 in Oldham. Amongst the Yorkshire districts, those which suffered most severely were Bradford (256 deaths), Leeds and Hunslet (440), Sheffield (282), Hull and Sculcoates (180). In the Northern counties the disease prevailed most in Stockton (117 deaths), Sunderland (165), and Newcastle-upon-Tyne (169). Of 368 deaths in North and South Wales, 201 occurred in Glamorganshire.

Not one of the 629 districts escaped without any deaths from *typhoid*, or some of the other forms of continued fever. There were 2096 fatal cases in London, 119 in Portsea Island, 91 in Chelmsford, 83 in Sudbury, 113 in Norwich, 142 in Bristol and Clifton, 198 in Wolverhampton*, 84 in Walsall, 156 in West Bromwich, 179 in Dudley, 300 in Birmingham and

* The unsatisfactory sanitary condition of the principal districts in South Staffordshire is forcibly shown by the following table of the deaths from certain zymotic diseases in Wolverhampton, Walsall, West Bromwich, and Dudley, which contained in 1851 a population of 323,461; and in all the other districts of Staffordshire, with a population of 307,084:—

DISTRICTS.	Population, 1851.	Small-pox.		Measles.		Scarlatina.		Whooping-cough.		Diarrhœa, Dysentery, and Cholera.		Typhus.	
		1856.	1857.	1856.	1857.	1856.	1857.	1856.	1857.	1856.	1857.	1856.	1857.

Aston, and 140 in Leicester. The mortality from this disease was generally high in the districts of Cheshire and Lancashire. In Yorkshire, 131 fatal cases occurred in Huddersfield, 204 in Bradford, 211 in Leeds and Hunslet, 171 in Sheffield, and 154 in Hull and Sculcoates. Sunderland lost 98, Newcastle-upon-Tyne 108, Abergavenny 116, and Merthyr Tydfil 176 lives.

Method of comparing the Local Rates of Mortality with the Standard Rate.

We have no means of ascertaining what the rate of mortality would be among men living in the most favourable sanitary conditions; otherwise observations for a term of years on a considerable number of such persons would supply a standard rate with which other rates could be compared.

In the absence of such a standard, the districts of England in which the mortality rate did not exceed 17 annual deaths in 1000 living, have been selected as the basis of a new life table, which will shortly be published, as the nearest approximation we can obtain to a table representing the human race in the normal state.

The 5th column in the annexed table shows the rates of mortality at 12 different ages in the districts of England which we call, for the sake of distinction, healthy. The sanitary conditions are often defective, but

TABLE showing the Method to be employed in comparing the RATES of MORTALITY in the HEALTHY DISTRICTS of ENGLAND, with the Rates prevailing in other Districts. LONDON is given as an example.

LONDON.

AGES.	Population estimated to the middle of 1851.	Average Annual Deaths in the 5 Years 1849-53.	Average Annual Rate of Mortality in the 5 Years 1849-53.	Average Annual Mortality in Healthy Districts (1849-53).	Average Annual Deaths which would have occurred if the Mortality had been the same as in Healthy Districts.

Persons -	2,973,963	57,582	·02425	*·01534	36,179

The Table may be read thus:—The number of persons living in London in the middle of 1851 at the age 15—25 was 208,028, and the average annual deaths in the 5 years 1849-53 were 1669, the average annual rate of mortality being ·00802, or rather more than 8 in 1000; the average annual mortality in the Healthy Districts at those ages in the 5 years 1849-53 was ·00691, or nearly 7 in 1000; the average annual deaths in London at that *rate would have* amounted to 1432.

* *This is the rate of* mortality that would prevail in the healthy districts at all ages if the distribution of *the ages were the same* as they were in London in 1851.

the defects are counterbalanced; so that the districts being much less unhealthy than the average, may be so designated.

It will be observed that if the population (2,373,983) be multiplied by 17, and the product be divided by 1000, the resulting number (40,358) will represent the annual deaths that would take place in London if the mortality were at the rate of 17 in 1000 annually. The actual rate of mortality in those districts was 17·72 in 1000 males, and 17·33 in 1000 females.

But the population experienced very different rates of mortality at different ages, and the proportional numbers living in London at the various periods of life is not the same as it is in the country districts, which send out emigrants. London is supported partly by immigrants and partly by births. It has hence an excessive number of people in the prime of life. Accordingly, it is found that with the population as it was distributed in 1851 the annual deaths in London would not exceed 36,179, or the annual mortality would be 15 in 1000 if the rates of mortality at each of the 12 periods of life were the same as those prevailing in the healthy districts.

Example: The number of boys under 5 years of age was 147,390; the annual rate of mortality in the healthy districts was ·04348; and multiplying these two fractions together, 147,390 × ·04348=6367 deaths which would have happened at London had the mortality been at the same rate as it was in the healthy districts.

By continuing the process, the numbers in column 6 are obtained, amounting in the aggregate to 36,179; the mortality in London should therefore have been $\frac{36,179}{2,373,983}$ = ·0152 or 15 in 1000.

All towns like Liverpool, Glasgow, and Manchester, have an excess of that part of the population which experiences, on account of age, less than the average rate of mortality. A part of the mortality of the towns is therefore marked by this circumstance.

And the effect of a correction for age such as has been employed in the Registrar General's reports shows that the number of *unnatural deaths* is always understated by comparing the total deaths with the deaths which would take place at the rate of 17 in 1000.

It is shown in the table that, on an average, 57,582 persons died in London annually during the five years 1849–53, whereas the deaths should not, at rates of mortality then prevailing in certain districts of England, have exceeded 36,179; consequently 21,403 unnatural deaths took place every year in London. It will be the office of the Boards of Works to reduce this dreadful sacrifice of life to the lowest point, and thus to deserve well of their country.

In Liverpool, by the same method, it is found that 6418 lives were lost in the year 1857, in excess of the deaths at the healthy rates.* In Manchester the sickness and mortality are also excessive.

---

* Deaths in 1857 in the Borough of Liverpool, and the Number that would have happened if the Rate of Mortality had been the same as in Healthy Districts of England.

	Deaths registered in 1857.	Deaths that would have happened at the Rates prevailing in 63 Healthy Districts.	Excess of Deaths over the Deaths that would have happened at the Rates prevailing in 63 Healthy Districts.
Liverpool Borough - - -	12,895	6,477	6,418
West Derby, Everton, and Toxteth Park Sub districts - - -	3,778†	2,529	1,249
Liverpool District - - - -	9,117	3,948	5,169

† The deaths actually registered in the three sub-districts were 4,176. To allow for the population included in the sub-districts, but not belonging to the borough; this number has been reduced to 3,778, by assuming that the deaths which *occurred beyond the limits of the* borough bore the same proportion to population as the total *deaths bore to the total population of the three* sub-districts.

We may hope that speedy measures will be adopted to heal the sicknesses of the large central cities, so that the smaller towns, and the country itself, may learn sanitary lessons from their improvements. Instead of being sickly, they will then be justly famed for salubrity and for their piety in obserying the divine laws.

The new Female Life Table.

A male *Life Table* for England was prepared some time ago, and was published in the Appendix to the Registrar General's 12th Report, with formulas and remarks on its properties and applications.

A similar Female Life Table for England has been computed, and will be found in the Appendix.

The chief facts on which the two tables are founded have been transcribed from the Registrar General's 9th Report, pp. 176–7. On the construction of Life Tables, see the Appendices to the 5th and to the 6th Reports. I have prepared another paper expressly on that subject, and it was read recently before the Royal Society.

The new Female Life Table is accompanied by a Table (p. 204.), showing in juxtaposition the mortality of males and females at each year of age.

The whole of the Tables (pp. 178–203), were calculated independently in duplicate by Mr. W. Clode and Mr. F. J. Williams. The results were afterwards compared and corrected. The proofs, after having been carefully read, were returned to the printers (Messrs. Eyre and Spottiswoode); and the corrected proofs were read a second time before they were sent to press.

I have the honour to remain,
Sir,
Your very faithful servant,
WILLIAM FARR.

To
The Registrar-General.

ENGLISH LIFE TABLE, No. 2.

FEMALES.

(*Corresponding Tables for Males appeared in the Appendix to the Twelfth Annual Report.*)

Note.—The ANNUITY TABLES (pp. 194—197) are calculated for Three Rates of Interest (3, 4, and 5 per cent.)

$$v = \frac{1}{1{\cdot}03} = {\cdot}97087379\ ;\ \lambda\ \bar{1}{\cdot}9871628$$

$$v = \frac{1}{1{\cdot}04} = {\cdot}96153846\ ;\ \lambda\ \bar{1}{\cdot}9829667$$

-The first and second columns in this respond in the nature of thei construc- relations with the columns D and N in ous Tables for calculating Life Annuities. bers in the first column are obtained by ng the numbers in the column Q of the e by the successive powers of $v = \frac{1}{1{\cdot}03}$ (when the interest of money is 3 per cent.), and dividing by 1000. The division by 1000 is equivalent to cutting off 3 figures, which is done merely for the sake of convenience, as the Table in its present form is sufficiently extensive for all the purposes to which it can be applied. The v varies with the interest of money.

POPULATION, DEATHS, and MORTALITY in ENGLAND for the Seven Years 1838–44.

Ages.	Population 1841. (Estimated to the Middle of the Year.)		Deaths in Seven Years.		Annual Rate of Mortality per Cent.

Note.—The mortality was not disturbed by any great epidemics in these years, and it is believed that they will serve well as the basis of Table use by Life Offices.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A, as Ashford, East.]

REPORT

TO

The Right Honourable Sir GEORGE CORNEWALL LEWIS, Bart., M.P.,
Her Majesty's Principal Secretary of State for the Home Department, &c. &c. &c.

General Register Office, Somerset House,
30th June 1860.

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1858.

One million four hundred and seventeen thousand two hundred and seventy-seven names were inscribed on the National Registers during the year.

Three hundred and twelve thousand one hundred and forty persons married.

The names of six hundred and fifty-five thousand four hundred and eighty-one children were recorded in the Birth Registers.

The deaths of four hundred and forty-nine thousand six hundred and fifty-six were registered during the same twelve months.

The recorded natural increase of the population—that is, the excess of the number of births over the number of deaths—was two hundred and five thousand eight hundred and twenty-five.

TABLE I.—Estimated POPULATION, with the Number of MARRIAGES, BIRTHS, and DEATHS registered in England in each Year from 1838 to 1858.

Years ended Dec. 31st	Estimated POPULATION in England in the Middle of the Years.†	MARRIAGES.	PERSONS *Married.*	BIRTHS (exclusive of Still-born).	DEATHS.	Excess of Births over Deaths.
1838	15,812,266	118067	236134	463787	342760	121027
1839	15,515,396	123166	246332	492374	338984	153390
1840	15,721,039	122665	245330	502308	359692	142616
1841	15,929,402	122496	244992	512156	343847	168311
1842	16,123,796	118925	237850	517739	349519	168220
1843	16,320,479	123818	247636	527325	346445	180880
1844	16,519,365	132349	264698	540763	356933	183830
1845	16,721,081	143743	287486	543531	349366	194155
1846	16,925,051	145664	291328	572625	390315	182310
1847	17,131,513	135645	271290	539965	423304	116661
1848	17,340,492	138280	276460	563059	399633	163326
1849	17,552,020	141863	283726	578159	440839	137320
1850	17,766,139	152744	305488	608422	373995	234427
1851	17,982,849	154206	308412	615865	395396	220469
1852	18,206,627	158783	317564	624012	407135	216877
1853	18,408,315	164520	329040	612201	421097	191104
1854	18,618,760	159727	319454	634405	437905	196500
1855	18,786,914	152118	304236	635043	423703	209340
1856	19,045,187	159837	318674	657458	390506	266947
1857	19,204,597	159097	318194	663071	419815	243256
1858	19,226,105	156070	312140	655481	449656	205825

† The Population has been deduced on the assumption that the annual rate of increase was uniform; viz. 1·220 per cent. in each of the 10 years 1841-51, and 1·236 per cent. in each of the 3 years 1838-40. For 1853-58 the increase of Population has been obtained by taking the excess of births over deaths in the four quarters ending June 30th, in each year.

Thus the daily average numbers were, marriages 428 ; persons married 856 ; births 1796; deaths 1232 ; excess of births over deaths 564.

The number of persons who married was less by 6054, and the number of births less by 7590, than the persons that married, and the births of the previous year.

As it was seven years after the Census was taken, the population cannot be given with certainty for the year 1858, but it may be estimated at 19,523,103.

Consequently upon this number it follows that to 100,000 persons living 1598 married, 3357 children were born, and 2303 persons died. The marriage-rate per cent. was 1·598, the birth-rate 3·357, and the death-rate 2·303. The mean rates of the twenty-one years were, marriage 1·632, birth 3·296, and death 2·236. The marriage-rate in the year was below the average ; both the birth and death rates exceeded the average.

Upon an average of twenty-one years, 1 in 61 persons living married annually, the birth of one child was registered to 30 persons living, and 1 in 45 living died annually. The birth-rate is somewhat understated, as registration is not enforced by penalty, and a certain number of births escape registration.

The decline of the marriage-rate indicates a somewhat depressed state of a part of the population. The higher rate of mortality is explained by the Tables showing the causes of death.

Marriages.

128,082 marriages were performed according to the rites of the Established Church; and 27,988 otherwise. The decrease in the marriages was chiefly among those who married by banns in the Established Church; among the Roman Catholics and the Jews.

The marriage of Dissenters has been facilitated by the Act 19 & 20 Vict. c. 119., which first came into operation in 1857. This accounts for the increase of marriages *not* according to the rites of the Established Church.

The annexed Table shows the relative proportions of the marriages by licence and by banns in different years. The marriages of the highe[illegible]

Mean . .	·816	1·632	3·296	2·230	123	61	30	45

Note.—The Table may be read thus:—In the year 1838 to every 100,000 persons living there were [illegible] marriages or 1542 persons married, 3029 births, 2238 deaths; the number of persons living to every marriage, person married, birth or death, was 130, 65, 33, and 45 respectively. A correction for increase of popul[illegible] has been made in calculating the above results.

classes marrying by licence are rather more numerous when the prices of wheat are higher than in the other years; and the marriages of artizans and labourers marrying by banns are most numerous when the prices of wheat are moderate or low.

Marriages of minors.—Of 10,000 males married, 586 were under 21 years of age; of 10,000 females married, 1837 were under 21 years of age; consequently of 5000 males and 5000 females marrying, 1212 were minors. The proportional number of marriages by minors has increased from 885 in the year 1843 to 1212 in the past year.

In the Midland Counties, around the North of London, in Nottinghamshire, and in the West Riding of Yorkshire, more than 8 in 100 men marrying are minors; in Bedfordshire 12 in 100 men are minors. In Kent, Surrey, Sussex, Hants, and Berks the proportion of minors in 100 men marrying scarcely exceeds 4 in 100.

Of 100 women marrying in each of the following counties, 23 are minors in Hertfordshire, 21 in Buckinghamshire, 24 in Northamptonshire, 26 in Huntingdonshire, 24 in Bedfordshire, 24 in Cambridgeshire,

22 in Essex, 20 in Cornwall, 26 in Staffordshire, 20 in Nottinghamshire and Derbyshire, 25 in the West and 21 in the East Riding of Yorkshire, 27 in Durham, and 20 in Monmouthshire.

Re-marriages.—Of 10,000 men marrying, 1422 were widowers; of 10,000 women, 920 were widows: or *one* in *seven* of the men was a widower, and *one* in *eleven* of the women was a widow. These proportions depend on two classes of facts,—the mortality of married couples, and the facilities for, as well as the disposition to, re-marriage. The proportion of widows in 100 women marrying was greatest in Hampshire, Berkshire, Wiltshire, Gloucestershire, Staffordshire, Warwickshire, Lancashire, Durham, and Monmouthshire: in the latter county 11·51 were widows to 100 women marrying. That was the highest proportion in any county. The highest proportion of widowers (17·77) was observed in Wilts.

127,165 bachelors married spinsters, and 6711 bachelors married widows; 14,547 widowers married spinsters, and 7644 widowers married widows. Thus in the aggregate 22,191 widowers and 14,355 widows were re-married.

Signatures of Persons married.—There are two kinds of statistics which are employed to show the state of elementary education in a country. The people are asked whether they can read or write, and the results are recorded; or when they are called upon to sign a public

1851	·858	5·591	·130	·728	38 6

* Disregarding the decimal point, this will read 804 marriages were celebrated to every 100,000 of the population; 135 were marriages by licence, 669 were marriages by banns. It may be assumed that these two groups represent the whole of the corresponding classes of society, whether belonging to the Church or not.

document — their own marriage register, for instance — the signatures by marks and by writing are counted. Upon the latter method facts only are recorded; and the people are taken indiscriminately from all classes of the population. The interpretation of the facts is a subsequent operation. Some women who can write badly sign with a cross; and great numbers of those who write their names write indifferently, and scarcely intelligibly. The line which separates the two classes is often indefinite; but it is drawn by the people themselves, and is drawn under the influence of the same feelings in different parts of the kingdom. The error may be regarded as a constant quantity; consequently the proportions writing in successive years, and in the several counties, indicate clearly the state and the progress of that important branch of elementary education.

It is gratifying to find that the numbers signing the marriage registers with marks have rapidly decreased since 1841: in that year 41 in 100 persons married signed with marks; in the year 1858 the proportion was 32 in 100. The proportion who wrote their names has consequently increased from 59 to 68 in 100. The improvement is most striking in the women.

In the last year 73 in 100 men, and 62 in 100 women, wrote their names; so 27 men and 38 women in 100 of each sex made their marks in signing their names. Seventeen years ago 33 in 100 men, and 49 in 100 women, made marks in signing the marriage registers. The signatures, it should be borne in mind, represent the state of education some years previous to the marriage, as the average at marriage was—men, 28 years; women, 21 years.

The men of London are the best writers (89 in 100); and then come the men of Westmorland (83), Northumberland (82), and Cumberland (82), Yorkshire (East and North Ridings, 82); in strong contrast, the men of the counties of Hertford (57), Bedford (59), Suffolk (59), Stafford (58), and Monmouthshire are extraordinarily illiterate.

The women of London (81) and Middlesex also stand nearly at the head of the list of writers; but they are excelled by the women of Westmorland (83). It is worthy of remark that the women and men of Westmorland write equally well. The counties in which the fewest women write their names are Bedford (52), Huntingdon (60), Cambridge (60), Cornwall (54), Salop (59), Stafford (45), Lancaster (45), Monmouth (47), South Wales (41), and North Wales (45).

† The proportion of Widowers and Widows in the Year 1841 is for the September and December quarters only.

It would be useful to the inhabitants of these counties if they would inquire into the causes which interfere with education, and if they would more especially ascertain what system is pursued, with comparative success, in the northern counties. If education is so conducted that 83 in 100 women who marry in Westmorland can write, how is it that only 54 in 100

44	North Wales	·614	61·6	45·2	4·27	11·63	13·32	8·38

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 799 marriages took place; of 1,000 men married 730, of 1,000 women 624, signed the marriage register by writing their names; of 10,000 men married 586 were not of full age, of 10,000 women married 1837 were *not of full age; of 10,000* men married 1422 were widowers, of the same number of women married 920 were *widows.*

women in Cornwall can write their names? The people of Cornwall have evidently something to learn from the people of the Northern Counties.

Buildings registered for the solemnization of Marriages.—The number of places of public worship registered for the solemnization of Marriages, and on the register on 31st December 1858, was 4072, being an increase of 147 during the year. It will be seen from the Table, p. viii., that 1375 of these places of worship belonged to the Independents, 914 to the Baptists, 739 to various sects of Wesleyan Methodists, and 505 to the Roman Catholics. Of the modern sects, the *New Church* had 22, and the *Catholic and Apostolic Church* 17. In London there were 273 registered buildings, in Lancashire 450 (of which number the Roman Catholics had 116), and in Monmouthshire and Wales, where Dissenters are more numerous than in any other division, 620. Including 12,350 churches and chapels belonging to the Church of England, the *Places of Worship* wherein marriages might be solemnized amounted at the end of 1858 to 16,422, besides the Jewish Synagogues and Quakers' Meeting Houses. There were in addition 630 Superintendent Registrars' Offices for the celebration of civil marriages.

Births.

The births were less numerous in 1858 than in either of the two previous years. 655,481 births were registered. There were 3357 births to every 100,000 of the population; consequently the birth-rate was 3·357 per cent. per annum; the mean of twenty-one years being 3·285. The birth-rate of 1857 was 3·435.

The birth-rate was highest in Durham (4·410) and Staffordshire (4·250); lowest in Westmorland (2·688), North Wales (2·753), Rutland (2·822), Devon (2·825), Somerset (2·828), Hertfordshire (2·856), Herefordshire (2·869), Berkshire (2·873), Wiltshire (2·879), Sussex (2·888).

Sex.—The births of 334,989 boys and of 320,492 girls were registered; so to every 1000 girls 1045 boys were born. The proportions to 1000 girls were 1160 boys in Westmorland, 1096 in Suffolk, 1089 in Oxfordshire, and 1086 in Cheshire; in Middlesex out of London, in Buckinghamshire, in Rutland, and in the North Riding of Yorkshire, the proportion of boys was less than 1000.

TABLE VI.—ENGLAND. NUMBER and ANNUAL RATE per Cent. of MARRIAGES in each Quarter of the Years 1838–58.

913 boys and 787 girls were registered in Westmorland; and the fluctuations in the proportions are great. Thus in 1857 the boys were to the girls as 986 to 1000; in 1858 as 1160 to 1000. In Lancashire 43,146 boys and 41,136 girls were registered in the year 1858, or 1049 boys to 1000 girls. In the preceding year the proportion was 1053 boys to 1000 girls.

M. Quetelet has recently called the attention of statists to the necessity of attending to the laws by which these fluctuations are governed.

TABLE VIII.—ENGLAND. BIRTHS, 1858.—NUMBER and PROPORTION of Male and Female Children born *in* and *out* of Wedlock.

No.	REGISTRATION COUNTIES.	Male Children born.	Female Children born.	Born in Wedlock. Males.	Born in Wedlock. Females.	Born out of Wedlock. Males.	Born out of Wedlock. Females.	Males born to every 100 Females born.	Males born *in Wedlock* to every 100 Females so born.	Males born *out of Wedlock* to every 100 Females so born.	Children born *out of Wedlock* to every 100 Births.

Seasons.—The births are registered in the highest proportion in the first half of the year; and the corrected proportions in the four quarters of the year were 1057, 1034, 953, and 956; or as 2091 to 1909 in the two half-years.

Children born out of wedlock.—43,305 children were born out of wedlock; or *one* in *fifteen* of the total children born alive.

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year to 1851. *Since* the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximately represented *by the excess of births over* deaths registered in each year. The proportions must be taken as provisional; until *the next census the absolute* numbers cannot be determined.

This subject was discussed at some length in my last Report;* and some of the circumstances by which the proportions in the various counties are modified, independently of the morality of the population, were pointed out.

106·2 males were born to every 100 illegitimate females; while the proportions among children born in wedlock were 104·4 males to 100 females.

Deaths.

449,656 deaths were registered in the year; or 29,841 deaths in excess of the deaths in the previous year. The mortality was unusually low in the year 1856, and unusually high in 1858; so the deaths in the latter

* Reg. Gen. Twentieth Report, pp. xiv.—xvi.

exceeded those in the former year by 59,150. The mortality was at the rate of 2·050; 2·175; and 2·303 annually in the three years 1856–7–8; the average annual rate for 21 years being 2·236 per cent. per annum. That is nearly at the rate of 22 in 1000; or 1 in 45 anuually.

Sex.—The mortality of males was at the rate of 2·365, the mortality of females at the rate of 2·243 in the year; the average rates of twenty-one years being 2·315 for males, and 2·158 for females.

The deaths of males in the year were as 102 to 100 deaths of females; the average being 103 to 100.

1	2	3	4	5

* The number of *children born alive* is to the number of *women bearing children* (including those who bear still-born children) nearly as 100 to 102. See the data of this estimate in the 17th Annual Report, Appendix, p. 72. The figures in col. 5. are deduced by multiplying the figures in col. 4. by 1·02.

TABLE XIII.—ENGLAND. DEATHS.—ANNUAL RATE of MORTALITY of Males and of Females, 1838–58.

YEARS.	DEATHS Of Males to 100 Males living.	DEATHS Of Females to 100 Females living.	Deaths of Males to 100 Deaths of Females.	Of equal Numbers living, the Number of Male Deaths to every 100 Deaths of Females.

1855	2·348	2·187	104	107
1856	2·125	1·978	104	107
1857	2·237	2·114	102	106
1858	2·365	2·243	102	105
Average of 21 years, 1838–58	2·315	2·158	103	107

The Table may be read thus:—In the year 1838 to every 100 males living there were 2·335 deaths of males; to every 100 females living there were 2·133 deaths of females; and to every 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of equal *numbers living* the deaths of males were 109 to every 100 deaths of females in 1838.

There is an excess of females living in England over males; and the deaths out of an equal number of both sexes living were in the proportion of 107 deaths of males to 100 deaths of females.

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year (1841—1851). *Since* the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximatively represented by the excess of births over deaths registered in each respective year ending June 30th.

Ages.—The seven years which had elapsed since the year 1851, when the population was enumerated, forbid any exact reasoning on the relations of the deaths to the living at the respective ages. But it is evident that the great excess of deaths in the year over the deaths in the two previous years was the result of a general increase extending over several of the ages; but most striking in the first ten years of life.

The diseases which prevailed, and the fatality of the various causes, are set forth in Dr. Farr's Letter, which will be found at p. 203. in the Appendix.

The various circumstances affecting the health of England and Wales, during each quarter of the year, are discussed in the following pages.

SUMMARY OF THE QUARTERLY REPORTS, 1858.

First Quarter.—January, February, March, 1858.

The return presents an unfavourable aspect. The marriages were much below the average number. The weather was severe, the people suffered, and the death-rate in the first quarter of the year was heavier

The Table may be read thus:—Of 100 Males living of the age of 35 and under 45, 1·303 died in 1848, 1·581 in 1849, and so on for other years, a correction for increase of Population having been made for each Age in each Year; and the deaths of persons whose ages were not returned have been distributed proportionally over each age. The data upon which this Table is constructed appear in this or have appeared in the previous Reports, and in the Census Report. *See* Census Report 1851; and the Annual Reports of the Registrar General, particularly *the 6th and 9th.*

† Cholera epidemics.

than it is on an average; but the birth-rate in the same quarter, though lower than in the three previous winters, was above the average. The population of the country is still increasing.

Marriages.—29,918 marriages took place in the quarter that ended on March 31st; and consequently 59,836 persons married in the three months. The number is less by 6806 than the number of persons who married in the winter quarter of 1857, and less by 7018 than the number of persons married in the winter quarter of 1856, but is rather more than the number

1858 –	3·567	3·480	3·195	3·198	2·635	2·305	1·902	2·400
Mean –	3·461	3·435	3·163	3·133	2·467	2·226	2·060	2·176

The Table may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population of England there were 3,032 births, and 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

of persons who married in the hard war winter of 1855. The marriage-rate of the quarter was 1·248 per cent. per annum; or at such a rate, if it continued uniform, that 1248 persons would marry in a year to every 100,000 persons living. The average rate is 1·410, and the rate of the quarter is such, that *one* out of every 9 marriages was deferred, or broken off. The stagnation of trade had cast a shadow over the prospects of the people, and they did not marry. The inhabitants of the manufacturing districts were under the greatest depression; and the number of marriages in Cheshire and Lancashire fell from 5815 to 4799, more than a thousand; but all the parts of England and Wales are so intimately associated in evil as well as in good fortune, that in every division the marriages declined.

Births.—The births of 170,959 children, born alive, were registered in the quarter that ended on March 31st; a number exceeding by 529 the births in the corresponding winter quarter of 1857; and the highest number that was ever registered within the same time and season. Children were born at the rate of 1900 a day.

The births in the quarter were at the rate of 3·567 annually to 100 of the population; the average being 3·52.

The births fluctuate little in comparison with the marriages and the deaths in the several divisions of the kingdom; but the decrease of births in the Northern counties is worthy of note.

Increase of Population.—170,959 births and 125,819 deaths were registered in the first ninety days of the year; and the natural increase of population in that period was therefore 45,140 or 502 daily. The natural increase in the winter quarter of 1857 was 686 daily. The falling off in the increase of population is referable to the excessively high rate of mortality during the past winter; for the births exceeded by 6 daily the births in the winter of 1857.

The daily natural increase of population in the United Kingdom was probably about 753 daily.

19,146 emigrants sailed from the ports of the United Kingdom at which there are Government emigration agents; of whom 7230, or allowing for persons of undistinguished birthplace, 8142 were of English origin. On an average 90 English emigrants left our shores daily. 5683 of the English emigrants sailed to the Australian colonies; 2299 to the United States; *none* to the North American colonies.

Nothing is more remarkable in the movement of our population than the decrease of emigration since the war. In the three months of 1849, January, February, and March, 60,626 emigrants sailed from our ports; 49,524 to the United States, 1337 to British North America, and 8627 to the Australian colonies; in the corresponding three months of 1858 only 19,146 emigrants sailed from the same ports, 8208 to the United States, 24 to British North America, and 9867 to the Australian colonies.

The Weather and the Price of Provisions.—The weather was colder and drier than usual during the three months, of which February was much the coldest. The mean temperature of that month at the Greenwich Observatory was 34°·6, or 3°·7 below the average (38°·3) of 87 years. Yet this February was not so cold by 5°·2 as the February of 1855, which froze our unfortunate troops in the Crimea. Setting down saturation of the air with aqueous vapour as 1·00, the degree of humidity was ·83, thus wanting ·17 of saturation. The average degree of *humidity* during 17 years was ·86. The rain-fall was 3·3 inches.

The price of provisions has undergone great fluctuations. The price of wheat in the first three months of each of the three years 1856, 1857, and 1858, was on an average 72*s.* 4*d.*; 56*s.* 10*d.*; and 46*s.* 5*d.* a quarter. The fall of price since 1856 has been 36 per cent., and since 1857 it has been 18 per cent. Beef and mutton by the carcase at Leadenhall and Newgate markets were cheaper in the winter of 1858 than in the winter

of 1857. The price of beef fell from 5¾*d.* to 5¼*d.* a pound, of mutton from 6¼*d.* to 5⅞*d.* a pound. Beef is at the same price, mutton is dearer than it was in the first three months of 1856.

Potatoes present an unfortunate exception; they attained an exorbitant price. The York Regents at the waterside market, Southwark, in the three winters of 1856, 1857, and 1858, sold respectively at 86*s.*, 110*s.*, and 152*s.* 6*d.* a ton. The price in 1858 was 39 per cent. higher than the price in 1857, and 77 per cent. higher than the price in 1856. The greengrocer's bill has thus increased; and the supply of vegetables for the poor population has been inadequate.

State of the Public Health.—125,819 deaths were registered in the three months ending on March 31st. This number exceeds by 17,154 the deaths in the corresponding winter quarter of the previous year, and by 22,805 the deaths in the winter quarter of 1856. The rate of mortality in the three winter quarters was 2·182, 2·295, and 2·625 per cent. per annum; or about 22, 23, and 26 per 1000. As a general rule the mortality in England is highest in cold winters, lowest in winters of moderate temperature, and it has a tendency to rise when the temperature of the winter quarter exceeds forty degrees of Fahrenheit.

The mortality of the quarter was at the rate of 2·805 per cent. in the town districts, and at the rate of 2·399 per cent. in the country districts, thus exceeding the average in town districts by ·217, and the average of country districts by ·173. The cause of the increase, therefore, pervaded town and country; but its pressure was most severely felt in the towns.

The deaths in the three months amounted to 125,819, and the mortality was at the rate of 26 deaths annually in 1000 of the population. Had the mortality been at the rate prevailing in 63 of the healthiest districts for the quarter ending March 31st (17·64 in 1000), the deaths would have amounted to 85,698. The excess of deaths over this number in the ninety days was 40,121, or 446 daily; which it was shown in the last quarterly report may be properly designated unnatural deaths.

The prevailing diseases which are mentioned by the Registrars in their notes are chiefly epidemics of the zymotic class; but diseases of nearly every class, and more particularly diseases of the respiratory organs, have been unusually rife.

A disease, which is not new, but has been described afresh in France, has been fatal in several districts. It has been called "throat disease" in some of the returns, and from its having attacked English visitors in Boulogne the name of that town has been occasionally employed to qualify the affection. Diphtheria, its name in the statistical nosology, is adopted from the French writer who described the disease under the name of *diphtherite*, in reference to the characteristic membranous exudation in the throat.* The termination "*itis*," as in gastritis, is used in medical language to designate pure inflammation of the organ, which the root of the word expresses; hence *ia* has been substituted for *ite*, the French form of "*itis*," as this cannot with any propriety be placed after *diphthera*, designating a product of disease, and not an organ of the body.

Diphtheria, the registrar states, prevailed in Canterbury, and in many instances proved fatal. The deaths (129) exceeded the births (105) in Canterbury; and nearly equalled them in the contiguous district of Blean.

In Essex one case of diphtheria, and three of "putrid sore throat," probably the same disease, have been registered in the parish of Ramsden Bellhouse (Billericay), where affections of the throat have been prevalent. The three cases were in one family. The registrar was told that some

* Diphtheria—διφθέρα—a prepared hide, leather. διφθέραι were used for writing on in the east, like *vellum or parchment.* (Liddell and Scott.)

nuisances existed at the back of the cottages where the deaths occurred. "Putrid sore throat" still prevails in Bradwell (Maldon), also in Essex, and was the cause of 8 out of 21 deaths: upwards of 400 cases have been attended by the registrar.

In the Bulmer sub-district (Sudbury) Suffolk, the deaths (57) exceeded the births (33); and the increase of deaths is owing to diphtheria amongst the children, bronchitis and influenza amongst the old. Diphtheria was a cause of the increase of deaths in Ludham and Bacton sub-districts in Norfolk. The mortality of Essex and of Suffolk was high during the quarter; and the mortality of the population of Norfolk was raised above its average nearly in the proportion of 3 to 2.

Diphtheria is again noticed by the registrar as the cause of a sixth of the deaths in Brewood sub-district, Staffordshire: three fatal cases occurred in one house. In Crick, one of the sub-districts of Rugby, *two* deaths occurred from diphtheria; two from acute laryngitis. The deaths exceed the births. The sub-district comprises eleven parishes, in none of which are steps taken for the removal of nuisances.

No notice has been taken of the disease by the registrars either in the country north of Staffordshire or in Wales; and it has probably not prevailed there epidemically to any great extent. It is, however, allied to one of the forms of scarlatina, and is still confounded with that disease, with croup, or with quinsy, by some practitioners.

Diphtheria, like Asiatic cholera, is probably only a more intense form of an old disease; but new intense spreading forms of disease deserve close attention, for with the increasing density of population, the intimate connexions between England and every unhealthy climate of the world, and the slow progress of sanitary improvement, we cannot consider ourselves absolutely safe from an eruption of some epidemics, which, like their predecessors, may open a new chapter not only of medical but of national history; for Niebuhr acutely remarks, that the great epochs of history are marked out by pestilences.

Epidemics, like new varities of animals, spring up under favourable circumstances. Each epidemic form has its congenial climate. The cholera epidemic is bred on the delta of the Ganges; yellow fever on the banks of the Mississippi; plague around the Nile in Lower Egypt; typhus in our towns; ague in our marshes; diphtheria, according to the popular theory in France—where the conditions are more favourable, on the whole, than they are in England—to the diffusion of putrid effluvia over the fauces.

Every Englishman admires the works of art, the picture galleries, the houses, the furniture, the cultivated personal tastes which surround him on every side in Paris, or on a small scale in Boulogne; he admires some of these objects every day, others every week; but has every day to give up his admiration at the door of that inscrutable *cabinet*, where the light of French refinement never comes; where his throat is assailed by the poisonous distillations that engender disease, and explode—if you count well the victims—with much more fatal consequences than gunpowder or even than fulminating quicksilver. That men should lock up jewels in cabinets, keep their larders full of delicacies, or stock their cellars with wine, is natural; but it is a singular absurdity in civilized men to attempt to hoard for years this volatile essence, which bursts its chains, and, like an unclean spirit, enters not only every apartment in the house, but every channel of access to the living chambers of the body, leaving at times such traces of its passage as diphtheria in the throat. The disease once generated, wanders abroad, and destroys life under circumstances quite different from those in which it was born; but impurity is always its natural ally.

The Scotch threw these matters into the streets, and justly incurred *the censure* of the fastidious. In London, and even in the country *mansions of* England, retreats still exist which may rival the French

magazines of impurity; but it has of recent years been the practice to throw the guano compounds of London, with water, into the sewers; which, though not constructed for the reception of such matters, and consequently suffering their volative principles to escape into the streets, convey a portion of their elements to the Thames, and commit them to its flood of tidal waters.

Dr. Barker has recently performed an ingenious series of experiments on animals, to determine the effects of each of the noxious principles which arise from cesspools. He placed the animals in a close chamber by a cesspool, with which a tube opening into the chamber communicated; and a lamp was arranged so as to draw a current of cesspool air steadily over the creatures inside. With a pair of bellows Dr. Barker could draw the air from the chamber. A young dog in half an hour "became very "uneasy and restless; he vomited, and had a distinct rigor, and in the "course of a day was exhausted. When he was removed he soon re-"covered." "Another dog was subjected to the cesspool air during "twelve days:" in the first seven days he underwent a series of sufferings, not unlike the symptoms of the diseases of children in hot weather; on the ninth he was "very ill and miserable." After he was liberated, on the twelfth day, he remained "very thin and weak for six weeks." Dr. Barker then continued his experiments on the effects of definite doses of the gases in the sewers, and killed or poisoned several sparrows, linnets, jackdaws, and dogs.*

Thus Dr. Barker has, for our instruction, imitated on a small scale, and on a few of the inferior animals, the vast experiment which is constantly going on, and destroys thousands of men, women, and children all over England. Instead of a few animals in a close chamber, more than two millions of people live in London over sewers and cesspools. The poison is generated in every house; it is distributed conveniently along all the lines of road, so as to throw up its vapours into the mouths, throats, and lungs of the people through innumerable gully-holes, which are either left untrapped, or trapped imperfectly, in order that the poisonous gases might escape. A variation in the pressure of the atmosphere draws up the stinking air from the sewers, like Dr. Barker's bellows. All the details of the experiment were as carefully contrived by the engineers of the old sewers' commissioners as if they were constructing an apparatus for passing currents of poisonous airs steadily over the people of London, with a view, like Dr. Barker, to ascertain their exact effects. The engineers of the new Board of Works have endeavoured to keep the apparatus in order.

It is now time that this cruel experiment should cease. Last year, when no epidemic prevailed, not less than 14,795 unnatural deaths were registered in London. This was the aggregate effect of the impure airs, and of other sanitary defects.

Will the London Boards of Works stop the experiment? Are they, like Dr. Barker, convinced and satisfied? Will they bring their common sense to bear on this question? Gases are constantly generated in the sewers and cesspools, and these gases will escape. Their elasticity carries them—and perhaps still more poisonous organic compounds—through the gully-holes, so long as there is no other outlet. But what can be an easier engineering problem than to discharge *into the atmosphere* the sewer gases, through pipes running up, and *at least as high as the chimneys?* This is in partial operation, and if made universal would be a mitigation of the evil. There are many ways of getting entirely rid of these gases, and why should not the inexpensive work be at once done?

---

* *See* paper on "The Influence of Sewer Emanations," by T. Herbert Barker, M.D., F.R.C.S., in Dr. Richardson's excellent *Sanitary Review* for April 1858, pp. 70–82. The London Sewers are only imperfectly represented by one cesspool; their emanations vary infinitely.

The sweet odours that enter the country are taxed; and every one has witnessed the admirable zeal of Her Majesty's customs' officers in their searches for *Eau de Cologne*. If a tax could be levied upon odours of another description, bearing some proportion to the evil they do, it would be much more productive; and if it were levied through the agency of the Boards of Works in London, and the Sewers Commissions elsewhere, it might be more beneficial, as they would undoubtedly find it economical to substitute fountains of rose water for their present gully-holes.

Second Quarter.—April, May, June, 1858.

The gloomy appearance of the winter quarter is gradually giving place to a better state of things. The marriages and the births were slightly below the average. But the public health exhibited signs of improvement.

Marriages.—39,890 marriages were celebrated in the quarter ending June 30th; consequently 79,780 persons married in the three months. This is nearly 20,000 in excess of the numbers married in the previous quarter, but is somewhat less than the numbers in the corresponding quarter of last year. The people married at the annual rate of 164, the average rate of the season being 171 in 10,000. The rate of marriage is lowest in winter; and in the last winter it was 125, or 16 below the average of that season; so that the improvement of the prospects of the people in spring is evident. The agricultural counties of the south of England, the northern counties and London, were but slightly affected; Staffordshire and Lancashire experienced the greatest degree of depression, but that was not very considerable.

Births.—The births of 169,115 children were registered in the quarter ending on June 30th, 1858; and the birth-rate was 3·480 per cent. per annum. It was slightly below the average rate of the spring season. The births decreased, or were stationary in every division.

Increase of Population.—169,115 births and 107,142 deaths were registered; and the natural increase of the population of England and Wales was 61,973 in 91 days; or 681 daily.

The probable natural increase of the population of the United Kingdom was 1021 daily. In the preceding winter quarter it was estimated at 753.

40,961 persons sailed from the ports of the United Kingdom at which there are Government emigration agents. After distributing proportionally 4084 of undistinguished birth place, it appears that 1930 were of foreign, while 20,077 were of Irish, 4702 of Scotch, and 14,252 of English origin. Of the English emigrants, 5717 sailed to the Australian colonies, 1543 to the North American colonies, 6218 to the United States, and 774 to other places.

The emigration is still decreasing; it was at the rate of 157 daily from England and Wales, 429 daily from the inhabitants of the United Kingdom. In the spring quarter of 1852, six years ago, 1375 of the people emigrated daily.

The Weather, and the Price of Provisions.—The mean temperature of April (46°) and May (52°) differed little from the average at Greenwich; June was hot throughout, and its temperature (65°) was 7° above the average. On the 16th of June the temperature near the sea rose as high as 88°, and reached the point 95° between the latitudes 51° and 52°. The mean temperature of the day was 77°; which is the highest temperature in June on record. Saturation being represented by 100, the degree of humidity in June was 67; so the air was dry, or 7° less humid than it was during 17 previous Junes. The rain-fall above the average in April and May was below the average in June. The rain-fall in the three months was 5·4 in. The air moves usually at the rate of 4 miles an hour on an average; it moved at the rate of less than a mile and half an

hour in June. The mean temperature of the Thames from 55° in May rose to 67° in June.

The prices of the principal articles of food have followed different rates: the price of the quarter of wheat has regularly fallen in the three months of April, May, June of the years 1856, 1857, and 1858, from 68*s.* 8*d.* to 56*s.* 9*d.*, and to 44*s.* 1*d.* a quarter; by the carcase at Leadenhall and Newgate Markets beef was 5⅜*d.*, 5⅝*d.*, and 5½*d.*; and mutton 5⅞*d.*, 5⅝*d.*, and 5¼*d.* a pound. While the price of wheat fell the price of potatoes (York Regents) rose from 80*s.* and 128*s.* to 163*s.* a ton, at the waterside market, Southwark. The prices of animal food declined, the price of wheat fell 36 per cent.; the price of potatoes rose more than 100 per cent. in the interval.

State of the Public Health.—107,142 persons died in the three months of April, May, and June; the deaths were at the rate of 1177 daily.

The mortality rate prevailing was 2·205 per cent. or 22·05 in 1000. This is slightly below the average rate, 22·25, of the ten preceding spring quarters.

The average death-rate of the sixty-three least unhealthy districts is 17·08 in 1000 for the quarter ending 30th June. The 23,867 deaths in excess of this rate are principally deaths from various kinds of poisons, and are therefore properly designated Unnatural Deaths.

Upon dividing the population into two portions, (1) the 8,247,017 people living in rather close proximity to each other, and (2) the 9,680,592 living much further apart, the result is that the mortality in the dense districts was at the rate of 24·80—nearly 25 in 1000; while in the other districts over which small towns and villages are distributed, the mortality was at the rate of 19·74, nearly 20 in 1000 of the population.

Now in England and Wales the town population is increasing much faster than the population of the rest of the country; and the question is therefore becoming every day graver:—How is the health of the nation to be sustained in the midst of the new dangers which millions of its people are encountering?

In the last spring quarter, while the mortality of the country districts decreased, the mortality of the town districts rose to 24·80, the average of the preceding ten years having been 23·94 in 1000. This was probably due partly to the reduced earnings in the towns, to the scarcity of potatoes, and to the intense heat, which accelerated the putrefaction of organic refuse in the houses, streets, ditches, and rivers.

Is the actual mortality of cities inevitable? The Turks reply in the affirmative. Many of the cities of Europe in which the death-rate ranges from 30 to 40 acquiesce quietly in their fate; and in England, where we have adopted another course, it has been, not without some show of reason, asserted that the unnatural deaths in towns are the penalties of civilization. But what is civilization? If it consists simply in the aggregation of families on limited areas, without arrangements to meet the exigencies of their new position, it will ever have heavy penalties to pay. Uncleanliness is, however, not a consequence of civilization; it is a relic of barbarism. The people of districts living in England wide apart experience generally a low mortality, and the mortality increases in proportion as their dwellings are brought into closer proximity. People remaining the same, and indulging in the same habits, collected from their scattered habitations into a camp, and kept in that camp for some months, suffer from diseases, and are ultimately decimated by epidemics. Our towns were no better than uncleansed camps in the middle ages; and London in the seventeenth century lost 50 in 1000, or, including the plague years, 80 in 1000 of its inhabitants annually. The black death, sweating sickness, and plague followed each other in succession. The mortality of *London was* reduced to the rate of 29 in 1000 at the

beginning of this century*; civilization advanced, and in the 15 years 1840–54, the rate further fell to 25 †, still remaining 10 in 1000 above the calculated healthy rate for London. As Athens in ancient story had to send seven of its youth, chosen by lot, to be devoured, so London has hitherto given up *ten* of every thousand of her inhabitants yearly to disease and untimely death. All the towns of the kingdom in the aggregate gave up proportionally this number of victims in the last three months. They were not destroyed openly. The poison by which they died was not purchased in chemists' shops. It was administered in the silence of the night, and in the streets at noonday, either with the air which they breathed, or with the water which they drank.

The poison is generated by the decomposition of effete organic matter, which gives off diffusible and dangerous products, wherever it is left beyond a day in the houses, streets, and neighbouring ditches or streams, instead of being lodged in the disinfecting earth.

It can easily be shown that the mortality bears a certain proportion to the quantity of the poison which the people inhale; and that the quantity is greatest under the cesspool system, which formerly prevailed in London, and is now in use in the French, German, and Italian towns. The mortality has gradually fallen in London as the cesspools have been abolished; it is still high in foreign cities where the cesspools are in use. In Manchester, where the dirt is allowed to decay behind the houses, and is not thrown into sewers, the mortality was at the rate of 33, in the years 1841–50; in the foreign cesspooled cities the mortality ranges from 30 to 44 in 1000.

Of 1000 people in London, *ten* died unnatural deaths annually; and to make the view of the facts clear, let it be assumed for a moment that into the causes of *four* deaths no inquiry is now made, that *three* are killed by the poisonous emanations from cesspools, closets, and sinks in dwelling-houses, offices, and workshops, that *two* die of diseases induced by the emanations from dirty streets or gullies, and *one* from the vapours arising from the Thames. Here evidently a great step is gained by the water system superseding the cesspool, as the noxious matter is projected into the sewers under the streets, and is partially oxydized. If the cesspools, therefore, are everywhere abolished, and the house is purified, the mortality, on the above hypothesis, will be reduced to the extent of 3; while if the corrupt sewer air in the sewers be carried above the chimneys beyond the reach of the lungs, *two* more lives will be saved; and if the water and banks of the Thames are no longer the final repositories of the town guano, *one* more life will be saved. These numbers are adopted, not as expressing exact results, but to fix attention on the fact that the impurities of London are the main causes of its insalubrity; and that in their fatal effects they may be classed in this order, (1) impurities of dwellings, (2) impurities of streets and gullies, (3) impurities of the Thames.

The progress of sanitary measures in London has hitherto resulted in the removal of the impurities from the dwelling-houses into the sewers and the Thames, and this enables us to understand how the mortality has declined as the Thames has grown fouler. It also enables us to understand how the mortality of London is lower than the mortality of many other cities.

The wise policy of substituting streams of water for cesspools is fully confirmed; and experience has shown that the town guano is less hurtful

---

* *See* M'Culloch's Statistics of the British Empire, Vol. 2., p. 613.

† The people in early and middle life are so numerous in London, owing to the excess of births and immigration, that the mortality should be 15 in 1000 to be, at the several ages, at the same rate as it is in the healthy districts, where the mean lifetime is 49 years. *The corrected* rate of mortality is 20 in 1000, and the actual uncorrected rate in those *districts is 17 in 1000.*

in the sewers and in the rivers than in the dwellings of the people. It is only when the supply of towns is drawn from the rivers saturated with foul organic matter that the people are poisoned in great numbers by water. The vapours of the Thames, noxious as everybody possessed of common sense has now learnt to consider them, are less heavily laden with poisonous exhalations than the vapours of cesspools and sewers. The practice of laying on water, and of abolishing cesspools should therefore be actively continued. At the same time steps should be taken to destroy or to deliver the exhalations of the sewers into the higher stratum of the atmosphere, where they would be partly destroyed, and would not be breathed, as they are now, undiluted. The Thames itself must be purified. Our present imperfect system of sewers admits of readjustment; but the country can never rest satisfied until the water which is distributed through its dwellings carries away all the town guano to fertilize the land, from which its materials were derived. Any other solution of the sewage question is provisional.

Exact observation for twenty years in every district of England and Wales places the question fairly before the country. Impure air is destroying the health of the people. The atmosphere in which they live can be purified by restoring the town guano to the fields. This involves a large immediate outlay; but the expense is not beyond the means of England. It will not exhaust the resources of a nation which freely devoted eighty millions sterling to resist the encroachments of Russia on the Turkish Empire; which maintains a squadron on the coast of Africa in the hope of diminishing the slave trade; which proposes, after conquering, to govern, perhaps to civilise India; and which has now a fleet on the other side of the globe opening the Chinese Empire to the enterprise of the world. If capital is sunk freely on these vast distant objects in the hope of realising returns, it will not fail when it is required to purify the air Englishmen breathe at home; for the investment will be profitable to all living men, and will confer blessings on all future generations. And if the national honour was concerned on the shores of the Black Sea, in the Baltic, on the Coast of Africa, in India, in the Chinese waters, in the presence of the enemy, is not the honour of England also concerned when the lives of her children are in peril, and no arm is stretched out to save? Can our towns strike their colours to their own accumulating dirt, and avow that they are vanquished, without ignominy? England is in sanitary science and art taking the lead in Europe, and teaching important lessons to all nations. But the work must be consummated. The mortality must be reduced. The people must be animated anew by the energies of health. And public men will find that some glory may be gained by saving life,—by great sanitary works. Honour will crown those who rescue the English race from pain, sickness, and degeneracy. They will for ever enjoy the satisfaction of having done their duty.

The Legislature has, in the Acts of the present Session, given the inhabitants of every district of England and Wales the power to raise the money and to execute the great works which the country requires; and it may be sanguinely hoped that the new powers will be employed to their full extent by the people themselves, under the Public Health and the Local Government Acts. The results will in a few years be apparent in the public registers.

Third Quarter.—July, August, September, 1858.

The depression of the country diminished in the spring quarter of the year. The marriages nevertheless remained below the average number.

The birth-rate was slightly below the average in the summer quarter. The mortality was less than the average of the summer season, and this is to some extent the *result of* sanitary improvements.

Marriages.—38,599 weddings were celebrated in the quarter that ended on September 30th; consequently 77,198 persons were married. The numbers were below the numbers of the married in the corresponding quarters of 1857 and 1856. The decrease since 1856 is observable in London, and in the divisions south of the Thames. The marriages in Lancashire, Yorkshire, and the Northern Division were nearly stationary; in the Welsh Division they decreased.

Births.—157,445 children were registered in the quarter that ended on September 30th, or 3736 less than the births in the corresponding quarter of the previous year. The birth-rate was 3·195, or slightly below the average rate of the season, 3·247.

Increase of Population.—157,445 births and 98,142 deaths were registered, consequently the natural increase of the population in the 92 days was 59,303, or 645 daily in England. The probable natural increase of population in the United Kingdom was 967 daily.

10,803, or, allowing for persons of undistinguished nationality, 12,844 English emigrants sailed from ports at which there are Government emigration agents in the last three months; 6859 to the Australian colonies, 692 to the North American colonies, 4877 to the United States, and 416 to all other places.

The emigrants from the United Kingdom amounted to 29,354; or to fewer, by fifteen thousand, than have emigrated in any corresponding quarter since 1847.

The Weather and the Prices of Provisions.—The prices of wheat fell progressively from 72*s.* 3*d.* a quarter in the months of July, August, September 1856, to 59*s.* 11*d.* in 1857, and to 44*s.* 7*d.* on an average in the corresponding three months of the present year; the decrease of price was thus 38 per cent. The price of beef by the carcase at Leadenhall and Newgate markets fell in the two years from 5½*d.* to 5¼*d.* a pound; mutton from 6*d.* to 5½*d.* a pound, or 8 per cent. in price. Potatoes (York Regents) were sold at 78*s.* a ton at the waterside market, Southwark; or 26 per cent. less than the prices of the same season in the previous year. In this year 30 lbs. were sold for a shilling; in the last year 21 lbs. only. The price of potatoes is now the same as the price was in 1856.

The weather during the three months presented some peculiarities; at Greenwich the temperature of the air in July was below, in August slightly above (1·5°), in September 4·0° above the average of 87 years. The humidity was below, the barometric pressure above the average. The rain-fall was 5·4 in. in the three months, or nearly two inches below the average. The rain-fall was not so scanty in the north; in latitude 52°–53° it was 7·1 in., in latitude 53°–54° it was 8·4 in. In the Isle of Wight, Devon, and Cornwall from 7 to 8 in. of rain fell.

State of the Public Health.—98,142 deaths were registered in 92 days; and the mortality was at the rate of 1·992 per cent. annually, or ·147 below the average. The average rate of the season exceeded 21; the actual rate of the present quarter was less than 20 in 1000.

During the last summer the annual rate of mortality in the population of the country, of villages, and of small towns, was at the rate of 17 in 1000; the average rate being 18. And in the same time the town population died off at the annual rate of 24 in 1000; the average rate being 26.

The deaths in the ninety-two days amounted to 98,142. If the mortality had been at the standard rate deduced from sixty-three of the least unhealthy districts, the deaths would have amounted to 72,698; consequently the deaths in excess of the comparatively healthy average, or the *unnatural* deaths, amounted to 25,444.

Diphtheria, which is often called "throat disease," has prevailed in some districts of the south, and has now extended northwards; it has been fatal in the Horncastle district, Lincolnshire; prevalent in Newark; and several children have died of the disease in Sheffield. Districts of the East Riding and of the North Riding of Yorkshire have been visited by the epidemic diphtheria.

Typhoid fever, which a young physician, Dr. Murchison, proposes to call pythogenic* fever, to point at its origin from putrid animal effluvia, has been prevalent in some districts. Several deaths occurred from it in Daventry. All the cases were confined to a small space which was badly drained. The Regius Professor of Medicine in the University of Oxford has recently written an interesting report on this fever occurring in the parish of Great Horwood. The township contained a population of 704 in 1851; and 125 had been attacked, 18 killed by the fever up to July 9th, the date of his report. He shows how the village, on the ridge of a hill, in a parish pleasantly wooded, with fine pastures and fruitful corn fields, occupied by a population wholly agricultural, was attacked by the fever; how the first case, appearing about Michaelmas in last year, occurred in one of the best houses in the place. The patient had been at Buckingham, and there was much fever at the time. He then tells how the brothers and sisters of the servant, and the servant herself, finally fell ill in their home; how all the people of a room over filthy water, in the worst house in the parish, were attacked, and three of the family died; and then how the inmates of a new row of houses and of old cottages were visited by the village plague. He sums up by ascribing the continuance of the disease during the last nine months in various degrees to contagion, overcrowded dwellings, putrescent matter, and an insufficient supply of fresh air, or, as it is called, bad ventilation. The evil is most grievous in the sleeping rooms. "We can do no more," said one woman, "than keep clean that which we have. We cannot get our landlord to "give us more air, or make the windows we have to open. 'Women,' he said, 'are best shut up.'" "I often awake stifled," said another woman, "and me and my husband go and sit at the window." The poor people, however, can remedy the other great evil from which they suffer; "accumulations of muck, filth, and piggeries close to human dwellings." Here is the type of fever and its causes in agricultural districts. Dr. Acland shows how the ravages of disease may be diminished. He sketches a model cottage, and refers for further information to the admirable volume by Roberts on the dwellings of the labouring classes. He tells how dwellings should be managed, and how nuisances should be abolished.†

The greater part of the evils from which the country people are now suffering is the result of ignorance, which can only be dispersed by the diffusion of sanitary knowledge through its natural channels, the medical practitioners, the public writers, the lawyers, the clergy, and the gentry of the country. Dr. Acland, at one of the fountain heads of education, has great opportunities, which he has already turned to account in this direction, with the happiest effects.

Following the waters of the hills of Buckinghamshire down through the fens, we arrive at Ely. Here a remarkable example is found of the salutary effects of simple sanitary measures, of which every town in the kingdom may have the advantage. Ely stands, with its lofty cathedral, on one of the old fen islands. It is a small city of 6176 inhabitants (in 1851), and is in the neighbourhood of the low lands, where the great systems of modern embankments and draining were commenced by Ver-

† Fever in Agricultural Districts. By H. W. Acland, M. D., F. R. S., Regius Professor of Medicine in the University of Oxford. This pamphlet should be widely circulated through all the agricultural districts.

muyden, one of Cromwell's colonels of horse. The Bishop of Ely in ancient times went in his boat to Cambridge. And the country around, like all our old marshes, is still imperfectly drained. The atmosphere has therefore no natural advantages. The Public Health Act was introduced in 1851. The Ely Board of Health was founded. They set on foot two great works: one for supplying the town with water, the other for carrying off that water through every house clear out of the town. The public works were completed at the end of 1854; and the houses were gradually connected with the public sewers, leaving, however, at the end of 1857, 200 in 1200 houses out of connection. Mr. Marshall, the superintendent registrar of the district, in an able paper shows the results of this great experiment. In the *seven* years (1843–49) before the Public Health Act was in operation, the mortality was at the rate of 26 deaths annually to every 1000 living; in the seven subsequent years (1851–57), when the sanitary measures were only partially carried out, the mortality fell down to the rate of 19 deaths annually to every 1000 living. The mortality in the two last years (1856–57) was at the rate of 17 in 1000. In the same periods the surrounding rural parishes underwent some improvement; but the improvement of the city has advanced so much more rapidly that its mortality was in the last two years 4 in 1000 less than the mortality of the surrounding country. The young people under the age of 35 have enjoyed remarkable immunities from disease, and the benefit will be transmitted to succeeding generations. The two chief sanitary works which have been completed are the introduction of water taken from the river of inferior quality, and the destruction of *four thousand* cubic yards of cesspools,—nearly four yards to each house. The surveyor, Mr. Burns, exclaims, with justifiable pride, "There is still a "number of cesspools remaining, and the sooner they are done away "with the better. After this is done, I may truly say that I found Ely "a city of cesspools, filth, and sickness; but I shall leave it a city of "drains, health, and cleanliness, and that is something to be proud of." Yes, Mr. Burns, you may well be proud of your work. Pau, in the Pyrenees, to which British invalids still resort for health, experienced a mortality of 28 and 23, when you had reduced the mortality of Ely to 17 in 1000.*

The citizens of Ely have sunk 15,000*l.* on their sanitary works, which appear to have been conducted in something like the same determined spirit as animated Cromwell's colonel of horse. Certain ratepayers who enjoy the benefits complain of the burthen of the rates.

We may now turn from this small resolute city in an agricultural district to Liverpool, the second city of the kingdom, where the great work of sanitary improvement is also advancing.

Liverpool lies on the shore of the fresh, deep, wide Mersey, which is lined by her magnificient docks; and the houses rise from the river over the red sandstone heights in long stretching lines. Lancashire and Cheshire cover the plains and hills behind the queenly town; before her are Ireland, America, and the Ocean which her ships ride over, carrying foreign produce or the manufactures of the north, to and from the various regions of the world. The place is well chosen for health; and in Gough's Camden (ed. 1806) Liverpool is said to be celebrated for "her beauty and populousness." Yet it was found and published in the first Registration Report†, that the mortality of the population of this district was in the latter half of 1837 at the rate of 39 in 1000 annually; while the population of West Derby, containing, with other parishes, the outlying parts of the borough, died at the rate of 25 in 1000. The strong contrast between the contiguous places, and the subsequent discovery that

† Registrar-General's First Report, Appendix, p. 118. 1839.

Liverpool was one of the unhealthiest parishes in the kingdom, excited surprise as well as regret in the public mind. A local association was formed of some of the best people; and the causes of the mortality were investigated and were afterwards made known by Dr. Sutherland in a series of lucid papers. Little, however, was done; the prophets had been crying in the desert; and in 1846 the mortality grew still more threatening. Cholera raged fearfully in the borough in 1849. Steps were now taken to carry out sanitary measures, under the direction of Dr. Duncan and the other able officers of the town. The sanitary school of Liverpool subsequently furnished some of the most efficient members of the commission, which did good service in the East. Still it is to be regretted that the health of the great bulk of the population of Liverpool has improved but slowly. Liverpool has a good supply of water; but it is still infested by cesspools, including under this name the filthy Lancashire midden; and the drains pour their contents into the dock basins, which exhale a malarious sickly air over the people. The mortality in the borough of Liverpool was at the rate of 29 in 1000 in the year 1857. Much good, therefore, has been done since 1837; thousands of lives have been saved. Still Liverpool has not yet, like Ely, taken the bull by the horns. Or why should not the mortality be as low as 19 or even 17 in 1000? What natural advantages has Ely, taking one thing with another, over Liverpool?—If Ely has had thousands of cubic yards of dirt removed, Liverpool has hundreds of thousands of cubic yards to deal with; but her means are commensurate with her duty. Mr. Newlands can do for Liverpool what Mr. Burns has done for Ely. The cesspool, the midden, or call it what they may, for it is still the same, is the chief destroyer of the Lancashire population. Crowded dwellings, vice, want, do a part of the mischief; but in Liverpool the cesspool destroyed a large proportion of the 6418 people who last year perished in excess of the numbers who would have died at the rates prevailing in country districts. The tender-hearted may shed natural tears over them as they lie in the cemetery. Abolish the cesspools of Liverpool, and you immediately save the lives of thousands of people. Yet the parties who have exerted themselves to put a stop to capital punishments have not been roused by the ruthless destruction of men; and no Beccaria has written on these crimes and punishments. A living poet in one of his last poems, exclaims:—

> "Ah, it is the gallows tree!
> "Breath of Christian Charity,
> "Blow! and sweep it from the earth."

But what number of lives did the "gallows tree" take away in 1857? Thirteen in all England and Wales; two only in Lancashire. And these were the lives of murderers, who were put to death for their crimes after the most deliberate judicial inquiry. But the six thousand four hundred and eighteen men, women, and children of Liverpool were destroyed cruelly in that year without discrimination. Of the cesspool, rather than of the gallows tree, a wiser muse will sing,—*Sweep it from the earth.*

Fourth Quarter.—October, November, December.

The returns present an unfavourable aspect of the country. The marriages indicated some improvement in the prospects of the people; and the deaths in the quarter are much above the average number. On this account, and on account of the increase of population, it has never before happened that so many deaths were registered in any autumn quarter as were registered in the last three months of the year 1858. The birth-rate was slightly above the average of the season.

The returns of the *year* 1858 show an excess of mortality in the six cold months, while the mortality in spring and summer was below the

average. 1858 was an unhealthy year; and the birth-rate was slightly below the average.

47,663 weddings were celebrated in the three months that ended on the 31st of December, and consequently 95,326 persons were married. The marriage-rate in the quarter was 1·930 per cent. per annum; so if the rate prevailed a year, more than 19 persons would marry to every 1000 living. The increase on the marriages in the corresponding quarter of 1857 is observable in every division except in the northern counties and in Wales.

Births.—The births of 157,962 children were registered in the quarter that ended on December 31st; so the births were at the annual rate of 3·198 per cent. or ·017 over the average of the quarter, but below the rates of the corresponding quarters of the two previous years.

655,481 births were registered in the year 1858, and the birth-rate was 3·557.

Increase of Population.—As 157,962 births and 118,553 deaths were registered, the natural increase of the population was 39,409, or 428 souls daily. The probable natural increase of population of the United Kingdom was 642 daily.*

7973, or, allowing for the numbers of undistinguished origin, about 9516 English emigrants,—103 daily,—sailed from the chief ports of the United Kingdom in the last three months of the year 1858; namely, 2834 to the United States, 6392 to the Australian colonies, 289 to other places.

The natural increase of the population of England in the whole year was 205,825, or 564 daily.

113,972 emigrants sailed from the ports of the United Kingdom in the year 1858. Of the number, about 45,726 were of English origin; on an average, 125 English men and women left our shores daily.

Prices, the Weather, and Pauperism.—The funds rose and the prices of wheat continued to fall in the year 1858. Wheat was sold at 41*s.* 9*d.* a quarter on an average during the last thirteen weeks of the year; and the prices in the thirteen corresponding weeks of 1856 and 1857 were 63*s.* 4*d.* and 52*s.* 0*d.* The fall was 34 per cent. in two years. Beef by the carcase was 5$\frac{3}{8}$*d.*, 5$\frac{3}{8}$*d.*, and 5$\frac{3}{8}$*d.* per pound in the same seasons at Leadenhall and Newgate markets; mutton 5$\frac{6}{8}$*d.*, 5$\frac{6}{8}$*d.*, and 5$\frac{4}{8}$*d.* The average prices of beef were stationary; but the average prices of the higher qualities fell from 6$\frac{3}{4}$*d.* to 6$\frac{1}{2}$*d.*; the prices of the lower qualities rose from 3$\frac{3}{4}$*d.* to 4*d.* Again, the prices of the best mutton by the carcase was 6$\frac{3}{4}$*d.* at the beginning and the end of the period; but the price of the inferior mutton fell a halfpenny in the pound. Potatoes, which are so important an article of food, were sold at the rate of 100*s.*, 140*s.*, and 87*s.* 6*d.* a ton at the waterside market, Southwark, in the three last quarters of the years 1856–7–8. Potatoes have been 37 per cent. cheaper than they were in the corresponding weeks of 1857, and 12 per cent. cheaper than they were in 1856.

The weather in the last quarter was peculiar, and had considerable effect on the mortality. The average temperature of the three months at Greenwich was 43·8°, differing little (0·2°) from the average of the corresponding months of 87 years. But November was very cold; the mean temperature was 39·6°, and on the 24th of November the lowest temperature recorded was at many stations below 20°, that is 12° below the freezing point of water. The mean temperature has been lower in only twelve out of 87 Novembers. October and December were above the average temperature of those months. October and November were

* The Scotch returns have not yet been received; Irish births and deaths are not *registered. The* excess of births over deaths in England and Wales is raised 50 per cent., *to represent* approximately the excess in the United Kingdom.

dry; December moist. The *fall of rain* was deficient in each month; for the fall was only 3·1 in., and the deficiency in the quarter amounted to 4·5 in. The rain-fall was in the four last years 1855–58 respectively 23·5 in.; 21·5 in.; 21·4 in.; and 17·2 in. The 17·2 in. of rain in 1858 is the lowest rain-fall since 1840: in that year the rain-fall was 16·4 in. The effect of this deficiency on the wells, and the water supply of the people generally, must be borne in mind; for when the springs fail, stagnant water is sometimes drunk and employed for domestic use.

The Poor Law Board has favoured the Registrar General with returns, which are of great interest, and throw much light on the condition of the people. They require little explanation. We learn from them that on an average during the quarter that ended on December 31st last, 115,751 in-door paupers and 710,904 out-door paupers were relieved under the Poor Law; or 826,655 persons in the aggregate were in the receipt of relief. The average number of out-door paupers in the last thirteen weeks of the years 1856, 1857, and 1858 were 720,003, 736,814, and 710,904. The number in the thirteen weeks of the last year is less than the numbers in the corresponding weeks of the two preceding years. In the year 1857 there were on an average 4·49 in-door and out-door paupers to 100 of the population; in 1858 the proportion was nearly the same (4·51). The average numbers, after corrections for places making no returns, were 869,027 and 882,498. The first quarter of 1858 was a season of evident distress; and the paupers then receiving relief amounted on a weekly average to nearly a million (974,017). The distress continued in spring, but diminished as summer advanced.

England thus under her system of Poor Laws bestows on 1 in 22 of her population, taking one day with another, relief to the extent of about 4*d.* a day, making in the aggregate about 6,000,000*l.* a year. This is perhaps not more than 2 per cent. on the income of all classes.

Some foreign writers occasionally speak of England as a country "eaten up" by pauperism; they do not seem to be aware of the fact that in other countries—as in Ireland formerly—the absence of a legally ordained system of relief implies aggravation and not absence of distress. It would be equally correct to look upon England as a country of wealthy rate-payers overflowing with Christian charity.

State of the Public Health.—118,553 deaths were registered in the three months that ended on December 31st. After correcting for increase of population, this implies that the mortality was at the annual rate of 2·400 per cent., or 24 in 1000.

The mortality of the quarter in town districts was at the rate of 29 in 1000 living; in the districts of the country, of villages, and of small towns, the mortality was at the rate of 20 in 1000 living. Upon taking the four quarters, of which the returns are now complete, the result is, that the deaths of 449,656 persons were registered in the year 1858, and the annual mortality was at the rate of 23 in 1000; in the large town districts the annual rate was 26·55; in the other districts, 20 in 1000 died.

The population of England is only enumerated every *ten* years, and the difficulty arising from our ignorance of the exact population of the several parts of the country is now sensibly felt. It is nearly eight years since the census was taken; and the growth of the population of the whole country has undergone considerable fluctuations during this important period. Particular towns are necessarily exposed to greater fluctuations than the whole kingdom; as they are peopled partly by indigenous inhabitants and partly by immigrants from the country. This rate (26·55 in 1000) may be taken as an under-estimate of the mortality of the towns; as 20 in 1000 is rather an over-estimate of the mortality in the country.

The population of England and Wales in the middle of 1858 probably did not exceed 19,576,950*; and, at the rates of comparatively healthy districts, the deaths in the year should not have exceeded 349,398; the actual deaths amounted to 449,656, and the excess of 100,258 deaths is due chiefly to the fatal neglect of the sanitary arrangements which are required in every district, and are indispensable in densely peopled cities. These 100,258 deaths may be called unnatural deaths. This is a sad reckoning; but it is an under-statement of the facts.†

The Lords of Her Majesty's Privy Council having under the Public Health Act the power to institute local sanitary inquiries, the registrars of every sub-district in the kingdom have been requested to give immediate information of any reigning epidemic, and to insert in their notes numerical statements of the deaths from certain leading zymotic diseases. After some revision their returns have been printed in the form of notes (*see* Quarterly Return, No. 40., pp. 30–48.), suggesting inquiries which will no doubt be zealously prosecuted by Mr. Simon, the able health officer of the Board.

It will be observed that different diseases have prevailed in different localities; each group of population all over the country suffering more

In deducing the results given in this Table the population up to 1855 has been increased in the same ratio which was observed between 1841–51. For the years 1856, 1857, and 1858, the increase of population has been obtained by taking the excess of Births over Deaths.

Names of the 125 Districts and 23 Sub-districts comprising the chief towns:—All the Districts of London (36), and Kingston, Richmond, Gravesend, Medway, East and West Maidstone Sub-districts, Canterbury, Thanet, Hastings, Brighton, Portsea Island, Alverstoke (Gosport), Southampton, Winchester Sub-district, Reading, Brentford, Edmonton, St. Clement Sub-district, Headington, Oxford, Northampton, Cambridge, West Ham, Colchester, Bury St. Edmunds, Ipswich, Yarmouth, Norwich, King's Lynn, Melksham, Salisbury, Exeter, Plymouth, East Stonehouse, Stoke Damerel (Devonport), Bristol, Bath, Bedminster Sub-district, Bristol, Clifton, St. Nicholas Gloucester, and St. John the Baptist Gloucester Sub-districts, Cheltenham, Hereford City Sub-district, Shrewsbury, Wolstanton, Stoke-upon-Trent, Wolverhampton, Walsall, West Bromwich, Dudley, Stourbridge, Worcester, Birmingham, Aston, Coventry, Leicester, Lincoln Home Sub-district, Radford, Nottingham, Derby, Stockport, East Macclesfield, West Macclesfield, and Sutton Sub-districts, Chester Castle and Chester Cathedral Sub-districts (Great Boughton), Liverpool, West Derby, Wigan, Warrington, Leigh, Bolton, Bury, Barton-upon-Irwell, Chorlton, Salford, Manchester, Ashton, Oldham, Rochdale, Haslingden, Burnley, Blackburn, Preston, Todmorden, Huddersfield, Halifax, Bradford, Hunslet, Leeds, Dewsbury, Wakefield, Ecclesall Bierlow, Sheffield, Bootham, Micklegate, and Walmgate Sub-districts (York), Sculcoates, Hull, St. Oswald and St. Nicholas Sub-districts (Durham), Houghton-le-Spring, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tynemouth, St. Cuthbert and St. Mary Sub-districts (Carlisle), Merthyr Tydfil, and Llangafelach and Swansea Sub-districts (Swansea).

The three months January, February, March, contain 90, in leap year 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365·25636 days, and 366 and 365·25636 days in leap year.

* This result is obtained by assuming that the population has increased in the towns and in the country at the same rates since 1851 as in the ten previous years (1841-51); by taking the excess of births registered over deaths in the whole country, the population is 19,523,000.

† If the ages and the mortality of the population of England had been the same as the ages and the mortality of the 63 healthy districts, the annual death-rate of England would not exceed 17·85 in 1000 living.

or less from its local disease, or enjoying unusual exemption. The excess of the mortality is most frequently referred to scarlatina and to the epidemic of diphtheria, which began on the southern coast, and has during the year spread over the North Midland and the Northern Counties. Some districts exhibit no increase of mortality. Thus in North Devon, among 105,692 people only 465 deaths took place in three months, and the mortality was at the annual rate of only 18 in 1000. In the sixty-three healthy districts the mortality of the quarter was at the rate of 19 in 1000 annually. In Glendale 39 in 14,348 people died in the quarter, and the mortality was generally low in the surrounding districts of

Northumberland. The Morpeth district is an exception; or rather the Bedlington sub-district of Morpeth, for there 96 of the deaths occurred leaving only 40 as the deaths in Morpeth itself. In Bedlington 15 persons died of fever; diarrhœa, bronchitis, and diphtheria prevailed. The mortality in Bedlington progressively rose from 23 in 1000 in the year 1856 to 27 in 1000 in 1857, and to 35 in 1000 in the year 1858, according to the calculation of Mr. Woodman, the clerk to the Board of Health. "From this it appears," he adds, "that at Bedlington the death-rate is "steadily increasing year by year; that the poison from filth and cess-"pools, and the want of water, are increasing, and producing their "certain results." Bedlington neglects sanitary measures, and sits tranquilly over its cesspools, which send up disease among the inhabitants. Morpeth has main sewers as well as a water supply; fever has nearly disappeared, and cholera has been averted, although yet much remains to be done to complete the sanitary defences of the place.

The mortality in many of the towns has been excessively high; and this has been notably the case in Brighton, Reading, Windsor, Great

Yarmouth, Melksham; Exeter, Plymouth, and the other towns of South Devon; Bath and the towns of Somersetshire; Bristol, Gloucester, and Cheltenham; Newcastle-under-Lyne and the Pottery Districts; Wolverhampton and Dudley; Birmingham and Stratford-on-Avon; Leicester, Lincoln, Nottingham, and Derby; Liverpool, Manchester, and the manufacturing towns of Lancashire; Keighley, Halifax, Bradford, and Leeds. In Sheffield 1018 persons died in 92 days, out of a population amounting in 1851 to 103,626. Certain sanitary works have been carried out in Lancaster, and only 178 persons died there in the same time, out of a population of 34,660. Multiplying the deaths and the population of Lancaster by *three*, it is seen that the deaths were in the proportion of 34 to 103,980, while in Sheffield the deaths were 1018 to 103,626! Can nothing be done to render the sanitary arrangements of Sheffield at least as satisfactory as those of Lancaster?

Upon examining all the facts, it is evident that the excessive mortality of the year 1858 may be traced, partly to the pressure in the early part of the year on the poor in the manufacturing districts, partly to the

extreme cold of November, partly to defective supplies of pure water, and partly to the prevalence of the epidemic of diphtheria.

We must not shut our eyes to the fact, that one great nuisance perpetually increases as the population increases, and that no effectual provision has yet been made for getting rid of it from human dwellings. It is referred to several times in the notes of the registrars in towns which have been most heavily afflicted. To take one instance:—the deaths (386) exceeded the births (375) in St. Peter's, Brighton; the registrar enumerates the prevailing zymotic diseases, and then observes:—

"The inhabitants of this sub-district are chiefly artizans, mechanics, and the labouring poor. In many of their dwellings a very insufficient supply of water has been available to them, owing to the dryness of the weather in the first portion of the quarter, the water in the wells in use having been very low. There is no effectual drainage attached to their dwellings, and the cesspool system is in general use."

Our towns have not had the advantage generally of being led by such enlightened and energetic men as the late Dean of Ely, and have consequently, notwithstanding some efforts, left the greatest nuisance of all still subsisting. Yet the removal of this nuisance is the one thing needful; in sanitary reform it is "the root of the matter."

Liebig, the great agricultural chemist of Europe, has recently reminded us of English guano as a substitute for foreign supplies. "I am firmly of opinion," he says, "that if English wishes to remain an agricultural "country she must use as manure the nightsoil and similar residues pro- "duced in large cities." Now England is a great agricultural country,

and she will remain a great agricultural country to the end of time. And before the supplies of Peruvian guano fail in our imports, she must bring the article which may be called English guano into the field. It is poison alike in the cesspool of large cities and in the middens of cottages in the country; it is manure in the soil. The land requires it; the houses must get rid of it.

Byron, to justify his plain speaking, quotes a sentence from Voltaire: "*La pudeur s'est enfuite des cœurs, et s'est refugiée sur les lèvres.*" Without pleading guilty to this charge, it must be admitted that while the cesspool nuisance has been increasing every year in all the cities of Europe, from Petersburgh to Paris, from Vienna and Venice to London and Liverpool, it suggests ideas so disagreeable that it is rarely mentioned. The time has, however, come when the thing must be met. It cannot be evaded. Scientific research has traced the propagation of typhoid fever to this source. It is the great nidus of the cholera poison. The very aggravated disease, diphtheria, which infests this country, first assumed the epidemic form in France. And every traveller knows, that if the perfumery of France is exquisite; if her *cuisine* is the despair of English gourmands; if her arts are admirable; if her society is charming; her *cabinets* are everywhere detestable. They give an Englishman literally *mal à la gorge.* And French guano was apparently the slime on which the diphtheria,—whether it is a new or old form of disease,—whether it is a parasitic or a simple zymotic malady,—assumed its epidemic character. In England it has unhappily found a congenial home; and all

over the continent it spreads under still more favourable conditions. In Munich, whence Liebig warns England of her danger, adorned as the Bavarian capital is with a Glyptothek, a Pinacothek, and other wonders of Bavarian art, delicate ladies are persecuted in the hotels by ammoniacal emanations.

Science has demonstrated that fermenting human excrement is a poison in and near human dwellings; and chemistry has shown that the same elements in other states become grasses, grain, fruits, and flowers, by the natural magic of the earth. Why then, it may be asked, have none of the enlightened despotisms of the continent emptied the cesspools of their subjects by absolute decrees? Why have they not conferred this boon on the native agriculture which they so assiduously protect? Neither want of knowledge, nor probably of good-will, has paralyzed administrative action, but rather want of power. Despotism is only almighty in its powers of doing mischief. It can set the world in flames; it can shed torrents of blood; but it cannot regenerate nations. It cannot purify the people it has subjugated. Otherwise a few lines in the first Code Napoleon might have abolished French cesspools, and have directed the French guano to be deposited every day in the French soil, and by such a law have conferred more benefit on France than she derives from nine-tenths of the articles in that famous Digest.

Ancient legislation did not shrink from plainly dealing with the most indelicate matters where human life was at stake, and where the physical purity of mankind was concerned. Thus, in the laws which we have been taught were delivered by Divine inspiration, the following passage is found:—"Thou shalt have a place also without the camp, whither thou "shalt go forth abroad: And thou shalt have a paddle upon thy weapon; "and it shall be, *cumque sederis* thou shalt dig therewith, and shalt turn "back and cover that which cometh from thee: *For the Lord thy God* "*walketh in the midst of thy camp*, to deliver thee, and to give up thine "enemies before thee; *therefore shall thy camp be holy: that He see no* "*unclean thing in thee, and turn away from thee.*" (Deuteronomy, xxiii. 12th, 13th, 14th.)

This is, *mutatis mutandis*, the true sanitary theory; all these matters, all dung, and all dirt, must be immediately placed under the soil, which is the best of all disinfectants; and modern invention can readily find the mechanism for effecting the purpose, in ways involving less than the Mosaic labour, and quite inoffensive to the refined sensibility of modern civilization. The air of our cities will then be sweet; our rivers will flow unpolluted; the foliage of trees and delicate odours of flowers will caress the senses in the country, in the cottage, and in the mansion.

In England, one of the free countries of the world, this might perhaps be immediately effected, with the consent of the people, expressed by their representatives, in an enactment somewhat to this effect: "Seeing "that English guano is a fertilizing manure in the soil, and is a loath-"some, shameful, and poisonous nuisance in or near dwelling-houses, be

" it enacted, that the retention of any such manure in cesspools, in privies, " in middens, or in any other form whatsoever, in or near a dwelling-" house, shall render the owner or occupier of the place in which it is " found liable to a fine not exceeding shillings a day." If the municipal and parish authorities have the necessary powers to facilitate the working of the measure intrusted to the police for execution, it would speedily effect a revolution in the sanitary condition of England.

"For the Lord thy God walketh in the midst of thy camp,"—thy cities and thy fields,—"therefore shall thy camp be holy: that He see no " unclean thing in thee, and turn away from thee;" nor behold again a hundred thousand of thy children perish in any year to come for national violations of His laws.

Vaccination Returns.—The Vaccination Extension Act of 1853 (16 & 17 Vict. cap. 100.) contained the following provision:—

" Sect. 4. Upon and immediately after the successful Vaccination of " any Child the Medical Officer or Practitioner who shall have per-" formed the Operation shall deliver to the Father or Mother of the said " Child, or to the Person who shall have the Care, Nurture, or Custody " of the said Child, a Certificate under his Hand, according to the " Form of Schedule herein-after inserted marked (A.), that the said " Child has been successfully vaccinated, and shall also transmit a Dupli-" cate of the said Certificate to the Registrar of Births and Deaths of " the Sub-district in which the Operation was performed; and such " Certificate shall, without further Proof, be admissible as Evidence of " the successful Vaccination of such Child in any Information or Com-" plaint which shall be brought against the Father or Mother of the said " Child, or against the Person who shall have had the Care, Nurture, or " Custody of such Child, as aforesaid, for Noncompliance with the Pro-" visions of this Act."

It appeared desirable to ascertain how this provision had worked; and accordingly each registrar was requested to fill up the annexed return:—

RETURN OF VACCINATION CERTIFICATES RECEIVED IN 1858.

		Total Number.
Total Number of *Duplicate Certificates* of successful Vaccination received by me from Medical Officers or Practitioners during the Year ended 31st December 1858.	.....	

N.B.—Be careful to state only the number of DUPLICATE CERTIFICATES *received by you, without regard to the number of "Entries" contained in your Register Book of successful Vaccinations.*

The above is a true Return.

(Signed)_____Registrar.

The registrars received 376,798 vaccination certificates, although they registered the births of 655,481 children.

Persons vaccinated are not always children; and the children vaccinated are often born in previous years. But this consideration may probably be left out of account; and it may hence be inferred that the registrars will not receive more than 376,798 certificates relative to the vaccination of these 655,481 children.

A certain number of children die before they can be vaccinated. If these are represented by the deaths in the first three months of life, they will not exceed 8 per cent., or about 52,400. There will remain 226,283 certificates unaccounted for. A certain proportion of the children must in spite of the law have remained unvaccinated; and in reference to another portion actually vaccinated, the medical practitioners must have neglected to forward the duplicate certificates to the registrars. That

the latter number is large is evident from the fact, that, according to the returns made to the Poor Law Board, 455,004 children in the year that ended on September 29th, 1858, were vaccinated successfully by the public vaccinators alone. In other words, their vaccination was paid for by the public. Of the number vaccinated successfully in the year 1858, by the public vaccinators, they must have neglected to send the duplicate certificates to the registrars in at least 78,000 instances; but as private practitioners sent a certain number of the 376,798 certificates, the public vaccinators must to that further extent have neglected to make the required returns.

The Act appears to work very unsatisfactorily in all its registration clauses, which evidently require revision.

Health of London in 1858.

The London Bills of Mortality date from an early period. They were commenced about the year 1592; were discontinued when the Plague ceased; and were resumed on 29th December 1603. Since then they form an uninterrupted series. The Bills of the London parish clerks, though imperfect, were of unquestionable utility; and the new Tables of Mortality carry out the ideas of the age of Elizabeth, by recording daily the causes of all the deaths of the people of the metropolis.

The parishes first included within the London Bills did not contain a greater population than some of the provincial towns of the present day: the population of those parishes indeed only contained 261,233 inhabitants in the year 1801, and 338,489 in the year 1851. London has grown like a mighty tree, by extension rather than by the internal aggregation of constituent parts; and while foreign cities, girded round by walls, have grown denser, and have risen vertically, London has extended its boundaries freely all around, and covers now 78,029 acres=31,576 *hectars*, = 121 square miles = a square of 11 miles to the side. The population in this area amounted in the year 1801 to 958,863, and in the year 1851 to 2,362,236.

It is worthy of remark, that the population of London has increased with great steadiness; thus in the five decennial periods the rate of increase was 18 per cent. from the year 1801 to 1811; and 21, 20, 17, and 21 per cent. in each of the next four periods of ten years. We see evident reasons for believing that London has not stopped in its onward course; for its houses are continually invading the surrounding fields; so the growth of population, going on nearly at the same rate as in the years 1841–1851, the inhabitants must now amount to about 2,720,607, of whom 1,274,432 are males, 1,446,175 are females.

The population of London increased at a faster rate (1·8 per cent. per annum) than the population of the United Kingdom; for it is the capital

Annual Mortality per 1000	25·83	30·08	20·94	23·40	22·47	24·41	29·38	24·06	21·75	22·20	23·56

of the British Empire, which in its commerce and in all circumstances affecting the population of its metropolis acquired immense development in the half century. The London of 1858 is equal to three Londons of 1801.

The extent of the population of London gives weight to the returns extending over short intervals of time, and enables the scientific inquirer to investigate the effects of atmospheric and of other conditions on the mortality.

The registered births in London amounted to 89,012, the deaths amounted to 64,093, in the 52 weeks of 1858; and the increase of people in this way was 24,919. By the calculation, the increase from all causes was 52,690, or nearly 1000 a week, in the interval from the middle of the year 1857 to the middle of the year 1858. The registration of births, not being compulsory, is not complete in London; and a portion of the increase of 52,690 is thus accounted for. But, in round numbers, it may be stated that London increases at the rate of about 1000 people weekly, of whom about 500 are immigrants in excess of the native emigrants who bid adieu to the banks of the Thames.

45,347 boys and 43,665 girls were born in the year.

32,579 males and 31,514 females died in the year.

The mortality was at the annual rate of 2·356 per cent., or 23 and less than 24 in 1000. This rate exceeds the rates (22) of the two years 1856–7, and the rates of 1850–1–2, namely, 21, 23, 22; but it is below the rates 26 and 30 of 1848–9, as well as the rates 24, 29, and 24 of 1853–4–5. The average rate of the 17 years 1842–58 was 24·52, and the rate of the year 1858 was 23·56 in 1000. If we go back to the seven years 1838–44, before the two last epidemics of cholera, the annual rate of mortality in London was then 25·22 in 1000.

London is divided into five groups of districts; and the mortality to 1000 living was 21·8 in the West districts, 22·5 in the North districts, 23·2 in the Central districts, 24·3 in the South districts, and 25·3 in the East districts. In interpreting these facts it must be borne in mind that the calculated population of particular districts cannot be viewed with the same confidence as the calculated population of London; and that the population is often differently constituted in respect to age and occupation. The reduction in the mortality is greatest in the South districts.

10,004 persons died in the public institutions of London, 5535 in the workhouses, 57 in the prisons, and 4412 in hospitals and lunatic asylums. Of the latter number 317 belong to the Greenwich and the Chelsea Hospitals, 211 to the Military and Naval Hospitals. About one in *six* of the inhabitants of the metropolis dies in the public institutions; nearly one in *eleven* dies in the workhouses. The death of so many persons in the large workhouses demands inquiry. Of the 64,093 deaths in 1858,

pensable: pure air for the people to breathe, pure water, and a healthy soil to live on.

Thus the cesspools of London, and collections of putrifying dirt, must be suppressed; the sewer air must be carried off or purified, so as not to poison people in the houses or streets; the method of burning coals must be adopted so as to consume the smoke, which is offensive to the senses and injurious to the lungs. Churches, chapels, theatres, and other public buildings, as well as crowded dwellings, where people drink each other's breath and draw in disease, must be purified. The pumps having shallow wells saturated with impurities should, as Dr. Thomson, Dr. Lankester, and other health officers have proposed, be suppressed, and the water supply by the companies should be still further improved. The streets should be cleansed *every day;* for it is evident that the cleansing arrangements of the Boards should keep pace with the increase of traffic and population.

To all this work the representative Metropolitan Boards will, we may hope, anxiously address themselves, as on their shoulders rest the responsibility of improving the health of the greatest city in the world,—the metropolis of the British Empire.

When this and other work is done, much will remain to be accomplished. Sanitary science is yet in its infancy; it can be greatly advanced by bringing into the field the great medical profession of the kingdom, armed with all its science and art, and working under the most advantageous circumstances. There are more than two thousand medical men in London and its vicinity, but they are employed chiefly in treating disease. They are often paid only in proportion to the quantity of medicines that their patients take. The art of preventing disease is not cultivated; it is not taught in any of our medical schools; it is not formally the subject of examination in our universities. The father of a family does not go to the doctor and say to him plainly: "How can I preserve my health? "How can I make my children well and vigorous? How can I develop "all their faculties in harmony to the fullest extent? Constantly advise "us, and lead us in the way of a healthy life; preserve us, and I will "pay twice as much as I now pay for the plucking of us out of the fire "of disease, and the treatment of our sores." Instead of this, the common course is never to consult or to pay the medical man until the evil is nearly done; until consumption has set in, diphtheria is developed in the throat, small-pox is furrowing the skin, fever is racking the brain, and then there is a midnight rush to the great blue and red lights burning in the streets; or in some cases even to the nostrums of quackery. How vainly, the returns show. The utility of curative medicine is evident to every rational mind; the utility of preventive medicine is still more clear. Witness the health of the ships' crews in Anson's and then in Cook's voyages; witness the health of the British army in the Crimea, which Miss Nightingale has shown experienced an annual rate of mortality ranging from 1174 to 7 in 1000 of the force, according as the principles of preventive medicine were disregarded or observed. Imagine the two thousand members of the most enlightened profession in the country employed in instructing the public how to preserve their health. How many thousands of lives would then be saved every year in London! The population would also be happier and better.

A beginning of a movement has been made in the right direction under Sir Benjamin Hall's Act. Medical Health Officers are appointed in all the London districts, and many of them are working courageously in the midst of unhealthy places, and against ignorant opposition, with success. Their reports are replete with interesting facts, and contain many words in season of sanitary truth, well calculated to influence and direct the Boards. They have deserved the public approbation; for they have done *quietly a great* deal of good work, and it is probable have saved many *lives, and prevented* much sickness.

GREAT BRITAIN.

THE return of the births, deaths, and marriages in Scotland, with which the Registrar General of Scotland supplies me, completes the Return for Great Britain.

The estimated population of Scotland in the middle of the year 1858 was 3,103,231, and the excess of births over deaths during the year was 40,663. The birth-rate was 33·58, and the death-rate 20·47 to 1000 living; and 12·64 persons married during the year to every 1000 living.

TABLE XXVI.—ESTIMATED POPULATION, MARRIAGES, BIRTHS, and DEATHS in Great Britain, 1858.

	Area.		Estimated Population in the middle of the Year 1858.	Marriages.	Persons Married.	Births.	Deaths.
	Acres.	Hectars.					
England and Wales -	37,324,915	15,104,312	19,523,103	156,070	312,140	655,481	449,656
Scotland - - -	20,047,462	8,112,627	3,103,231	19,603	39,206	104,195	63,532
GREAT BRITAIN -	57,372,377	23,216,939	22,626,334	175,673	351,346	759,676	513,188

Note.—The population of England and Wales has been obtained by taking the excess of births over deaths in the 4 quarters ending June 30th in each year; the population of Scotland has been deduced on the assumption that it increased in 1857 at the same rate as it did in each of the 10 years 1841-51.

PROPORTION per Cent. of MARRIAGES, BIRTHS, and DEATHS to the Population of Great Britain, 1858.

	Areality.		To 100 Persons living.			
	Acres to a Person.	Hectars to a Person.	Marriages.	Persons Married.	Births.	Deaths.
England and Wales - -	1·91	·77	·799	1·598	3·357	2·303
Scotland - - - - -	6·46	2·61	·632	1·264	3·358	2·047
GREAT BRITAIN - -	2·54	1·03	·776	1·552	3·357	2·268

The total area of a country, divided by its population, gives what is here called the "Areality;" it is the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

The excess of births over deaths in Great Britain was 246,488. The birth-rate was 33·57, and the death-rate 22·68 to 1000 living, while 15·52 persons married out of every 1000 living.

During the year 962 persons married, 2080 children were born, and 1405 persons died on an average every day in Great Britain; the average daily excess of births over deaths being 675, which number represents the recorded daily natural increase of population.

His Royal Highness the General-Commanding-in-Chief has favoured me with a return of the strength and the number of deaths in the army abroad, which during this year was larger than usual in consequence of

---

TABLE XXVIII.—DEATHS OF OFFICERS AND MEN in the ARMY ABROAD, and Estimated Numbers belonging to Great Britain and to England and Wales, in each of the five Years 1854, 1855, 1856, 1857, and 1858.

YEARS.	Deaths of Officers and Men in the Army Abroad.	Estimated Numbers in Col. 2 belonging to	
		Great Britain.	England and Wales.
1	2	3	4
1854	7,383	4,287	3,496
1855	20,315	11,794	9,619
1856	2,580	1,498	1,222
1857	3,220	1,860	1,525
1858	7,363	4,275	3,486

The number of Deaths in the cols. 3 and 4 were estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in the next Table derived from the Census Report, Occupations, Vol. I., Supplementary Tables, p. ccclv., vi. *See* Table XXIX.

TABLE XXIX.—ARMY SERVING AT HOME AND ABROAD.

	1851
Officers and Men born in England - - -	67,647
,, ,, Scotland - - -	15,300
,, ,, Ireland - - -	53,169
,, ,, Foreign Parts - -	6,754
Total - - - - - -	142,870

It was inferred also that the 76,446 officers and men abroad in the army in 1851 should be added to the population of the several parts of the United Kingdom, also in the proportions indicated in the above Table. Thus the population of England and Wales, at home in 1851 was 17,927,609; add the proportion of the army abroad (36,196) belonging to England and Wales and its population becomes 17,963,805. The estimated population at home in 1858 was 19,523,103, and the population, including its share of the army abroad, was deduced from the following proportion:—

17,927,609 : 17,963,805 : : 19,523,103 : x = 19,562,523

Great Britain was dealt with on the same principles.

TABLE XXX.—ANNUAL RATE OF MORTALITY per Cent. per Annum, including the Deaths of Soldiers Abroad.

YEARS.	GREAT BRITAIN.	ENGLAND and WALES.	FRANCE.
1855	2·287	2·312	2·594
1856	2·065	2·053	2·306
1857	2·157	2·178	2·323
1858	2·262	2·316	2·306

the Indian mutiny. I am enabled now to deduce the rate of mortality in the population of Great Britain, including its due share of the army abroad, and the mortality now admits of comparison with that of France.

The births to 1000 people living in the two countries are 27 in France and 34 in Great Britain; the deaths 24 in France, and 23 in Great Britain; while the people of the two countries marry at nearly the same rates.

Births and Deaths of English Subjects at Sea.

The captains of ships continue their imperfect compliance with the Registration Act; and while the accounts kept by the Registrar General of Seamen of the wages and effects of seamen dying before the termination of the voyage, show a total of 3486 deaths, or 19·6 in every 1000 living during the year, the number reported to me at this office was only 390. The mortality among this important body of men is higher than it should

---

The Population of England and Wales for 1854, 1855, 1856, 1857, and 1858 has been deduced by taking the excess of births over deaths since 1851, when the population was enumerated.

* According to the official Enumeration this Population includes 166,428 men, being the Effective Strength of the Army of the East in the Crimea in the month of January 1856. M. Legoyt has favoured the Registrar General with the Returns of France for the years 1856, 1857, and 1858. The population for the year 1858 has been obtained by taking the excess of births over deaths. The Census is not taken on one day in France, as it is in England, and the date of the French Census is not stated.

Table XXXIII.—Proportion per Cent. of Marriages, Births, and Deaths to the Population of England and Wales, and in France, 1854–8.

	England and Wales.					France.				
	1854	1855	1856	1857	1858	1854	1855	1856	1857	1858

be among men of their ages and physical advantages, and it is evident that a proper standard of cleanliness, ventilation, and good quality of food, has not yet been attained.

Of the births at sea 112 were reported to me.

The registers of the marriages of British subjects before Her Majesty's Consuls abroad, received by me, pursuant to the Statute, amounted to 171 in the year 1858.

The causes of deaths in the year 1858 are discussed in a letter addressed to me by Dr. Farr, which will be found in the Appendix.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

TABLE XXXIV.—NUMBER of BIRTHS and DEATHS of ENGLISH SUBJECTS in BRITISH VESSELS AT SEA, reported by the Captains or Commanding Officers of Vessels, and entered in the "Marine Register," pursuant to Sections 21 and 26 of the Registration Act.

		TOTAL.	MALES.	FEMALES.
From 1st July 1837 to 31st Dec. 1858:—				
Births at Sea		862	430	432
Deaths at Sea		4211	3786	425
Whereof were reported during the years 1856, 1857, and 1858:—

* *The Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names.*

† Clifford's Inn (pop. 36 in 1851), and Serjeants Inn, Chancery Lane (pop. 5 in 1851), were transferred from the St. Clement Danes sub-district of the Strand district (13) to the South sub-district of the West London district (18) during the year 1858.

MARRIAGES in the Year 1858—in DISTRICTS.

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 630 in number, are arranged according to their local position under the Registration Counties.

† For a table of the Deaths in the principal *Public Institutions* situated in the Districts of London see pages 53-4.

‡ See Note (†) p. 6.

Note.—Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes *that the Births in the District*, instead of exceeding the Deaths were, in fact, *less than the Deaths* to the extent stated.

NOTE.—The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose.

The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse belonging to *another* District or Union is included.

Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

The Excess of *Deaths* over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

For the number of Deaths in the Hospitals, Workhouses, and other principal Public Institutions in London, see pp. 83-4.

* See Note (†) p. 6.

ENGLAND.—SUPPLEMENTARY TABLE of the

['The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 112 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a *few persons*, or *diseases* which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Thus *mumps* was the cause of 111 deaths (Males and Females) in the year 1858, and scarlatina of 30,206. The mortality of

* One of these causes is returned as Black-pox and one as Swine-pox.

† The following cases are taken from the returns as examples of Tetanus occurring in young children. A Male 9 days old died " 3 days; Lock Jaw after natural separation of Navel;" certified. A Male child, aged 7 months, died of "Tetanus 13 days;" certified.

‡ No cases is returned as Needle-pointers disease.

ued at page 128.)

Causes of Death at different Periods of Life, in the Year 1858.

scarlatina, deduced by dividing the deaths from that disease. *plus* 111, by the total population of England, will be found to differ little from the mortality from scarlatina alone. Where it is desired, partial correction however can now be made by means of the following Supplementary Tables, containing many of the deaths from distinct diseases, such as mumps, glanders, epistaxis, piles, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of disease, such as softening of the brain (necrencephalus), which are returned in many cases under other heads, as paralysis, &c.

These Tables are an extension of the Tables of Causes of Death in England, pp. 120–125.]

* Excluding Hanwell Lunatic Asylum, the mortality in the Uxbridge district was 20 to 1,000 persons living.
† In calculating the mortality for the ten years 1841–50 the districts of Wycombe and Henley are omitted, as being the districts of Headington and Oxford.

ion 1851, Average Annual Rate of Mortality from All Causes in the Ten Years 1841–50, and Deaths from several Causes in the Year 1858, in the Districts of England—*continued*.

IV.—EASTERN COUNTIES.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND in 1858, by WILLIAM FARR, Esq., M.D., F.R.S., D.C.L. 203-213

Letter to the Registrar General on the Causes of Death in England, by William Farr, Esq., M.D., F.R.S., D.C.L.

Year 1858.

Sir,

The causes of deaths that were registered in England and Wales in the year 1858 have been made the subject of investigation; and I now beg to submit to you a few of the most prominent results.

Perhaps the chief fact of all is not unworthy to be regarded with satisfaction — that of 449,656 persons who died, 440,922 did not pass away without leaving some record, more or less correct, of that last illness which sealed their fate. And it is near the truth to state that the nature of that illness was described by men professionally qualified to give the information, in about 80 per cent. of the total number of deaths.

Twenty-three persons died out of a thousand living in the year, a proportion which is higher than the mean obtained from a series of twenty years, though the latter is elevated by seasons of excessive mortality from epidemics. The weather, which was at periods extremely cold, and was also marked by sudden changes, was the obvious cause of the unhealthiness of the year. Bronchitis, pneumonia, whooping-cough, scarlatina, diphtheria, quinsy, croup, were unusually developed. Social conditions were, on the whole, not unfavourable. Wheat, which had been sold in the previous year at 56*s.* a quarter, was sold in 1858 at 44*s.*; beef and mutton were also cheaper in the London markets; and though the amount of poverty charged for relief on the public wealth was great in the early part of the year, it was, as compared with that of two previous December quarters, very sensibly diminished at its close. But the months both of winter and autumn were cold; though the mean temperature of the year, as deduced from the Greenwich observations, was 49·2°, which is very near the average. February was cold nearly throughout its course, and its mean temperature was almost 4° below the average. April and May had vicissitudes of cold and heat; and the heat of June was so great that there was no instance except one since 1771 in which the mean temperature of that month had been exceeded. July was cold; September remarkably warm; in November the air during three weeks was exceedingly cold, and afterwards unusually warm; on November 24th the thermometer fell below 20° at many places, and at Royston in Hertfordshire it fell to 11°. The result was a considerable increase in the mortality of the last quarter of the year. The air was generally dry in 1858; and the rain-fall measured only 17 in.

Out of 100 deaths 25 were caused by Zymotic diseases; 19 by Constitutional diseases; 37 by Local diseases; 16 by Developmental diseases, and 3 by Accidental and other violence. Taking the English population in the aggregate, the chance that amongst the various forms of death the fate which a human being must encounter will be *accidental*, is nearly as one to 34; but this risk, it is evident, is increased to some, and therefore lessened to others, according to occupation and other circumstances.

Out of 1000 persons living in 1858, 6 died from diseases of the Zymotic character; 4 from Constitutional diseases; 8 from Local diseases; 4 from Developmental; whilst about 2 out of 3000 living lost their lives accidentally or from injury wilfully inflicted.

I. Zymotic diseases in the aggregate were exceedingly fatal; they carried off 110,971 persons, which is a much greater number than occurred in any one of the series of years 1850–57, with the exception of the cholera year 1854. Scarlatina was pre-eminent in this class, and with its auxiliary diphtheria proved fatal in 30,317 cases; in either of the two previous years it hardly exceeded 14,000. Other throat complaints, quinsy, and croup, fatal respectively in 623 and 6220 cases, also appear to have been more prevalent than usual. Lancashire suffered much from scarlatina, which ravaged Liverpool and West Derby, Wigan, Bolton, Chorlton, Manchester, and Salford, Ashton, Blackburn, Chorley, Preston. In Yorkshire Keighley, Halifax, Bradford, Leeds, and Sheffield were also attacked with severity; and in other parts may be mentioned the metropolitan districts Westminster, Pancras, Islington, Shoreditch, Bethnal-green, Stepney, Mile-end Old Town, Poplar and Lambeth; also Brighton, Great Yarmouth, Plymouth, Liskeard, Bristol and Clifton, Newcastle-under-Lyme, Wolverhampton, Birmingham, Aston, Leicester, Basford, Radford, Nottingham, Derby, Newport, Swansea, Saint Asaph, and Conway.

The deaths from small-pox rose from 3936 in 1857 to 6460 in 1858. Taunton, Bath, Bristol, Gloucester, Shrewsbury, Stoke-upon-Trent, Burton-upon-Trent, Birmingham, Liverpool, and West Derby, Wigan, Ashton, Sheffield (where it was fatal in 290 cases), Abergavenny (159), Merthyr Tydfil (609), Neath (159), Carmarthen (111), Pembroke and Haverfordwest, Portsmouth and Bridport were the chief centres of its activity. In Monmouthshire and Wales small-pox was fatal to 1700 persons.

The deaths from measles rose from 5969 to 9271; whooping-cough and influenza showed an increase, while typhus, and still more diarrhœa and cholera, declined.

Syphilitic disease killed 1006 persons in the year, in a large proportion infants, who had received it as their only inheritance. Hydrophobia has been less frequent lately; for whereas the fatal cases ranged from 11 to 25 in the years 1850–5, in the last three years they were only 5, 3, and 2. Want was recorded as the cause of death in 62 instances; in how many more it was the real but unavowed source or support of fatal disease, it was impossible that register books could reveal. Almost a thousand children died from want of breast-milk. "Alcoholism" destroyed 712 persons, of whom the deaths of 288 were expressly referred to intemperance, and 424 more vaguely to delirium tremens.

Though diarrhœa, as has been stated, was generally less prevalent than usual, yet it attacked the same large populations in Lancashire and Yorkshire as were infested by scarlatina, and prevailed there more than in London, where the stench of the Thames had become famous. The fall of rain in the summer months (July, August, September) increased from London northwards. Rain is supposed to wash the sewers, cool the air, and promote the health of a large town; and it might be worth while to inquire whether it had the opposite effect at that time under peculiar circumstances, or to what other cause the development of diarrhœa was due in the northern parts.

II. The Constitutional Class, which includes with a few others dropsy, cancer, and the tubercular diseases, though doubtless subject to a great extent to human arrangements, will be modified chiefly by processes that are necessarily gradual, and less by the fluctuations of heat and cold. The deaths referred to it were 82,416; and they discover little difference in amount from those of former years. It may be remarked, that supposing the population of London is now rather more than double that of the Welsh Division, the rate of mortality which they suffered from phthisis was nearly the same in 1858, though the two divisions are

different in important circumstances. But other pulmonary diseases, bronchitis, pneumonia, asthma, &c., were more than three times as fatal in London as in Wales. Though North Wales and South agree in their average annual rate of mortality (2 per cent.) yet in 1838 North Wales contrasted favourably with the Southern portion of the Principality as regards the mortality from phthisis, and still more favourably as regards that from other pulmonary complaints.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

III. Local Diseases. This class showed unusual activity, and the increase of mortality which it caused is apparent in the Tables under nearly all the *Orders* of disease of which it consists, and is very manifest under diseases of the Respiratory Organs, the deaths from which rose from about 53,000 and 58,000 in the two previous years to 65,516. There was a clear increase in affections of the brain, the heart, the kidneys, and the genetic organs; a decrease in those of the joints, and a very remarkable decrease in phlegmon. Diseases of the Digestive Organs remained nearly the same in respect of the sum of mortality; but while many

specific diseases in this *Order* decreased, less defined diseases of the stomach and liver, from some cause not obvious, ranged higher in the Tables. Cold weather will account for the most important of the above results, especially the mortality of pulmonary diseases.

IV. Developmental Diseases. The deaths under this general head rose from 62,178 and 68,629 in the two previous years to 69,895. The increase was under "Old Age." A great many septuagenarians and others still older, were cut off by the cold of winter without any special disease, so far as could be observed, in their enfeebled frames. Malforma-

* Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

The mortality of women in childbearing had, happily, grown almost constantly less in a series of years, 1848–57; and to 10,000 children born alive in each year the proportion of mothers who died had declined from 61 to 42. In 1858 this improvement was checked, and the proportion rose again to 48. The increase was chiefly from metria. The cause is, no doubt, to be found in the same conditions that rendered the year unhealthy to the general population. It might be shown that the deaths in question were relatively numerous in Lancashire and Yorkshire, where scarlatina, typhus, and diarrhœa prevailed. And it may be added that pauperism was considerable at the end of 1857, and, as has been mentioned, in the beginning of 1858; and it is reasonable to believe that many poor women then suffered partial privations, which diminished the chance of successful labour.

In the English and Welsh counties, taken in the mass, the proportion of deaths by metria to other deaths in childbirth is 11 to 21, or nearly

---

TABLE (3)—ENGLAND. CAUSES OF DEATH in the Year 1858, arranged in the order of Mortality.

CAUSES OF DEATH.	Number of Deaths registered in the Year 1858.	*Proportional Number* from each Cause to 1,000,000 Deaths from All Causes.	CAUSES OF DEATH.	Number of Deaths registered in the Year 1858.	*Proportional Number* from each Cause to 1,000,000 Deaths from All Causes.

half; in the South Midland and North-western, it is nearly the same; in London and the Eastern Counties it is considerably greater, being 11 to 16; whilst in Wales it is not equal to the fourth part. The differences shown by these figures are probably in principal part regis-

TABLE (4).—MORTALITY OF WOMEN BEARING CHILDREN at different Ages in the Four Years 1855, 1856, 1857, and 1858.

Age of Mother.	Estimated Number of Women bearing Children, 1851.	Deaths distinguished in the Four Years 1855, 1856, 1857, and 1858.				Annual Rate of Mortality. To every 100 Mothers bearing Children, the Number of Deaths by			
		Placenta Prævia and Flooding.	Puerperal Mania.	Puerperal Convulsions.	Rupture of Uterus.	Placenta Prævia and Flooding	Puerperal Mania.	Puerperal Convulsions	Rupture of Uterus.
15—25	107,440	166	72	390	12	·069	·030	·161	·005
25—35	328,720	632	169	270	61	·095	·025	·040	·009
35—45	166,140	784	59	152	56	·229	·017	·044	·016
45—55	7,545	48	4	8	2	·291	·024	·048	·012
15—55	609,845	1630	304	820	131	·128	·024	·064	·010

In calculating the annual mortality a correction has been made for increase of population. The annual rate of increase (females aged 15–55) 1841-51, was ·01200, and it has been assumed that the number of women bearing children increased at a uniform rate at each of the ages in the Table. At the age 15–55 there were 7,735 deaths from childbirth and 4,050 from metria in the 4 years 1855–58. Of the 7,735 deaths from childbirth only 3,787 were designated under any of the definite headings of the class (*see* Supplemental Table of Causes of Death); and the deaths under each of the headings in the above Table are assumed to have been understated in the same ratio, and raised accordingly in calculating the mortality. A similar correction has been made for each age in the Table.

TABLE (5).—MORTALITY from METRIA at different AGES, in the 4 Years 1855, 1856, 1857, and 1858.

Ages of Mothers.	Estimated Number of Women bearing Children, 1851.	Deaths from Metria in 1855–58.	Annual Number of Deaths from Metria to 100 Mothers living.
15—25	107,440	1,146	·250
25—35	328,720	1,777	·127
35—45	166,140	1,078	·153
45—55	7,545	49	·153
15—55	609,845	4,050	·155

In calculating the annual rate of mortality, a correction has been made for increase of population.

TABLE (6).—DEATHS of WOMEN in CHILDBIRTH in the Twelve Years 1847–58.

YEARS.	Number of Deaths from			Deaths of Mothers to 10,000 Children born alive.
	Metria and Childbirth.	Metria.	Accidents of Childbirth.	
1847 - -	3226	784	2442	60
1848 - -	3445	1365	2080	61
1849 - -	3339	1165	2174	58
1850 - -	3252	1113	2139	55
1851 - -	3290	1009	2281	53
1852 - -	3247	972	2275	53
1853 - -	3063	795	2268	50

1855 - -	2979	1079	1900	47
1856 - -	2888	1067	1821	44
1857 - -	2787	836	1951	42
1858 - -	3131	1068	2063	48
12 years 1847–58 -	37656	12201	25449	51

trational, and arise from the greater facility of obtaining medical attendance and the written reports of duly qualified persons, enjoyed by large towns, as compared with parts that are less populous, perhaps wild and inaccessible. But that metria is more frequently encountered in crowded cities is also true; and that it is more frequently met in some provincial districts seems to be indicated by the fact, that, while medical certificates are less procurable in the Eastern Counties than in the South Midland, the proportion of fatal cases of metria is higher in the former than in the latter.

V. From VIOLENCE which was either Accidental, Homicidal, Suicidal, or Judicial, 14,151 deaths were inscribed on the registers. Deaths from accident (or negligence) were nearly eight times as many as those inflicted wilfully. Suicide was next in numerical strength; 344 deaths were referred to murder and manslaughter; there were 9 public executions.

In a complete classification of the causes of death, BATTLE would find its place under the general head of violence. But for nearly 200 years since the engagement at Sedgemoor it has supplied comparatively few facts that are admitted into a registration of deaths in England. At periods that happily are not of annual recurrence the *milites læsi sed invicti* return from distant battle-fields to sink under their wounds on their native soil.

The county of Lancaster, containing Liverpool with its enormous shipping trade, Manchester and other hives of manufacturing industry, though its population is less probably than that of London by several hundred thousands, contributed a greater number of violent deaths. In Lancashire there were 2036 deaths; in London, with its bustling streets and wharves, its passenger traffic on water and land, and its great building operations, there were 1937. The ratio of violent deaths in Liverpool is remarkably high. It was also high in Monmouthshire; for, with a population equal to that of Dorsetshire, there were 269 deaths in the former, and 119 in the latter. And to compare South Wales, in which there were 594 deaths by violence, with Northumberland, where there were 255, it will appear, by taking equal parts of the population, that the numbers were in the proportion of 84 (for Northumberland) to 97 (for South Wales).

Of 12,523 deaths by accident there were 5159 from fractures and contusions; 3125 from burns and scalds; 2124 from drowning; 903 from suffocation; 282 from poison; 136 from gunshot wounds; 80 from wounds by sharp instruments; and 714 were apparently accidental, but by ways or with weapons not defined. Out of 100,000 persons living, nearly 27 received fatal fractures in the year, 16 died from burns or scalds, and 11 were drowned.

Under homicide 344 deaths are included; and as a considerable proportion of these were cases of murder, particularly infanticide, it is appropriate to remark that only 9 persons suffered the extreme penalty of the law.

Suicide claims 1275 persons. Of the various means of self-destruction, hanging was adopted in not much less than half of the whole number of cases; the mode next in frequency was incision, chiefly of the throat; drowning occupied the next place; poison the fourth; shooting the last. The choice of the instrument is unquestionably ruled by the readiness with which unfortunate persons in "temporary insanity"—to use the phrase of coroners' verdicts—may obtain it; and, secondly, by the less degree of skill and force required to wield it. Other considerations, such as those of efficiency, and the tendency to disfigure the human image, will also operate to determine the means by which mortal troubles may be "opposed" and ended. Water is grateful to the imagination; to be hanged "like a dog" is an opprobrium; but the rope, the handkerchief, and the knife, things of vulgar use, are more accessible than the glass

[redacted]

[redacted]

[redacted]

in all 1457. In Liverpool and West Derby it was stated that in the quarter 58 persons had no medical attendance in their last illness; in Manchester the number of persons deprived of that advantage was so great as 181.

In Yorkshire as many as 10 persons out of a hundred who died had no medical attendance; in the Welsh Division at least 12 out of the same number were not medically attended.

I have the honour to be,
Sir,
Your faithful Servant,
WILLIAM FARR.

To
The Registrar-General.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A, as Ashford, East.]
